Sirs,
Objection to Rochford Core Strategy, 175 houses in Hawkwell is UNSOUND

The proposal in Rochford Core Strategy for this many houses in the Ward of Hawkwell West is UNSOUND because the vital requirements of PPS 12 are not met in terms of sustainability, and therefore the location of Hawkwell West (South Hawkwell) should be removed by the Inspector and the allocation moved to a sustainable location.

In summary the reasons that development in this location is unsustainable under PPS 12 are:-

Travel

Limited public transport
Increased car use causing heavy congestion
Inability to improve highways
Distance from shops
Distance from rail stations

Environment

Semi-rural location unsuitable for large development
Complete loss of character
Loss of Green Belt
Loss of wildlife
NO social, economic or environmental benefits whatsoever

In addition, the Core Strategy is UNSOUND because it does not fulfil the principles that are expressly stated in the Core Strategy as it relates to the proposal for Hawkwell, namely -

The Core Strategy

'Seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'

'locate development in areas where alternatives to car use are more viable'

'accompany any development with requisite highway infrastructure to mitigate their impact on the existing network'

No such benefits apply and any development would be detrimental to the character of the existing settlement in Hawkwell West.

I therefore object to the proposal in the strongest possible terms.

Summary:

NO !!!! to the above, I have voiced my concerns before!! why is no attention being paid to this issue ???
I object as the proposal is unsound for lots and lots of reasons !!
New housing in Hawkwell is a bad move and will cause untold problems in the future as it is not a sustainable location.
The vital requirements of PPS12 are not met.
This semi rural location is unsuitable for a large development and has no social, economic or enviromental benefits whatsoever!
And would detract from the existing character of this lovely location and disturb the precious wildlife.
Please add my comments to what I am sure is already an ever growing list,

I hope to here some kind of positive response soon.

Objection to Rochford Core Strategy 175 houses in Hawkwell
Objection to planning application 330 houses by David Wilson homes

The proposal in the Rochford Core Strategy for this many houses in the Ward of Hawkwell is UNSOUND because the vital requirements of PPS12 are not met in terms of sustainability, and, therefore, the location of Hawkwell West should be removed by the Inspector and the allocation moved to a sustainable location. In summary the reasons that development in this location is unsustainable under PPS12 are as follows:-

Travel

Limited public transport, increased car use causing heavy congestion, (I live on the B1013 and the traffic has increased greatly since I moved here in 1993, many road accidents and nearly every day it can take me 10-15 minutes to leave my driveway onto the B1013.

Inability to improve highways, distance from shops, distance from rail stations.

Environment

Semi rural location unsuitable for large development

Complete loss of character

Loss of green belt

Loss of wildlife

No social, economic or environmental benefits whatsoever

In addition the Core Strategy is UNSOUND because it does not fulfil the principles that are expressly stated in the Core Strategy as it relates to the proposal for Hawkwell.

Finally such a large scale development would lead to an unwelcome strip coalescence of built settlements which is not in line with Council policy. Additionally we live across from Hawkwell Common and the council is aware of the youth problems and anti social behaviour in our area from Clements Hall through to Spa Road.

Summary:

I understand that you are wanting public views about the above and I would like to make objections on various counts

1. Objection to Rochford Core Strategy of 175 houses in Hawkwell is unsound because the vital requirements of PPS12 are not met in terms of sustainability and therefore the location of Hawkwell West should be removed by The Inspector. It is unsustainable under the PPS12 as follows:

Travel - we have very limited public transport and even buses are often cut out for no reason

- increase of cars, I often have problems trying to get out of Poplars Avenue due to the amount of cars now
- inability to improve highways
- distance from shops and railway

Environment - semi rural location unsuitable for large development

- loss of character
- loss of green belt (green belt was protected by past governments and even if it is only 1% now what about the percentages taken in future. Green belt is sacrosanct! (You should be congratulated on saving so much in this area in the past).
- loss of wildlife
- NO social, economic or environmental benefits whatsoever

2. Objection to Planning Application of 330 houses by David Wilson Homes

3. Objection to unelected East of England Regional Assembly making decisions on our behalf.

Summary:

It is unsustainable under the PPS12 as follows:

Travel - we have very limited public transport and even buses are often cut out for no reason

- increase of cars, I often have problems trying to get out of Poplars Avenue due to the amount of cars now

Agent: N/A

Full Text:

I am writing to object to the proposal, in the Rochford Core Strategy, to erect 175 new houses in Hawkwell because this many houses in the Ward of Hawkwell West is unsound. It (the proposal) does not meet the vital requirements of PPS12 (the Governments Planning Policy) in terms of sustainability, and therefore the location of Hawkwell West should be removed by the Inspector and the allocation moved to a sustainable location.

To summarise; the reasons the reasons that development in this location is unsustainable under PPS12 are as follows:
TRAVEL: public transport is very limited, (in fact pretty hopeless), therefore the development will lead to severely increased car usage and the inevitable jams during busy times, (check out Cherry Orchard Way in the mornings). The new houses are also a considerable distance from the shops and the Railway Station and a large proportion of local people commute to London so can you imagine the chaos during the commuter time/school time period? Additional roads may help but we don't have the ability to improve our local highways.

ENVIRONMENT: Hawkwell West is a semi-rural location which is clearly unsuitable for a large development. The loss of greenbelt will result in an inevitable proportionate loss of wildlife, and the character of Hawkwell will disappear with no social, economic or environmental benefit whatsoever. There are NO plusses to this development!!

The Core Strategy talks about protecting the character of existing settlements and specifically "seeks to take advantage of development opportunities that will provide, social, economic and environmental benefits". No such benefits would apply to this location, in fact, the development would be detrimental to the existing settlement of West Hawkwell!!! It also states that "there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected". This limit has already been exceeded in Hawkwell West. In fact the council is already in arrears with it's legal obligation to provide allotments in the area.

The Core Strategy also says "locate development in areas where alternative to car use are more viable", "reduce the requirement to travel" and accompany any development with requisite highway infrastructure to "mitigate their impact on the existing network". There is no space for the development of local roads, especially in Rectory Road, therefore the development will have the opposite effect and considerably increase the requirement to travel, (particularly by car). moving on to public transport, the Core Strategy states that "planning should be well related to existing public transport where possible". There is just one bus to and from Rayleigh/Southend per hour, (which stops in the early evening) and no prospect of Arriva providing an appropriate service in the long term.

Finally, such a large scale development would lead to an unwelcome strip coalescence of built settlements which is not in line with Council Policy.

Summary:

Full Text: OBJECTIONS TO ROCHFORD CORE STRATEGY - 175 houses in Hawkwell

The proposal in the 'Rochford Core Strategy' for this many houses in the Ward of Hawkwell West is UNSOUND because the vital requirements are not met in terms of sustainability, and therefore the proposed location is totally unsuitable. The reasons for our objections are.

1. Public transport is very limited, being one bus per hour from Southend to Rayleigh going through Hawkwell., and there is no prospect of this being changed for the better!! There would be an increased use of cars causing more congestion on the already busy roads. We are constantly being reminded about using alternatives to car use, but the distance from the railway station is too far for most people to walk. The distance from shops makes it necessary to use a car. The present roads are already saturated and not suitable for improvement.
2. Our semi rural location, is unsuitable for a large development. The building of so many dwellings would adversely affect the whole area. We would lose the character of our 'village', along with the green belt, trees and wildlife, some of which are rare species. The proposed tiny amount of green land would not be enough to relocate the wildlife.
3. I can see no social, economic or environmental benefits of such a development.

Please consider our objections. Thank you.

Full Text: Objection to Rochford Core Strategy, 175 houses in Hawkwell is UNSOUND

The proposal in the Rochford Core Strategy for this many houses in the Ward of Hawkwell West is UNSOUND because the vital requirements of PPS12 are not met in terms of sustainability, and, therefore, the location of Hawkwell West (South Hawkwell) should be removed by The Inspector and the allocation moved to a sustainable location. In summary the reasons that development in this location is unsustainable under PPS12 are as follows:

Travel

limited public transport
increased car use causing heavy congestion
inability to improve highways
distance from shops
distance from rail stations
Environment

semi rural location unsuitable for large development
complete loss of character
loss of green belt
loss of wildlife

NO social, economic or environmental benefits whatsoever

In addition the Core Strategy is UNSOUND because it does not fulfil the principles that are expressly stated in the Core Strategy as it relates to the proposal for Hawkwell. Please see the following:

The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. No such benefits would apply to this location and development would be materially detrimental to the character of the existing settlement in Hawkwell West. It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected'. This limit has already been exceeded in Hawkwell West.

The Core Strategy says 'locate development in areas where alternatives to car use are more viable', 'reduce the requirement to travel' and accompany any development with requisite highway infrastructure to 'mitigate their impact on the existing network'. It is not possible to do this in Hawkwell West as there is no space for development of local roads, especially in Rectory Road, and any development here would increase the requirement to travel, especially by car. Moving on to Public Transport the Core Strategy states that 'planning should be well related to existing public transport where possible'. There is just one bus to and from Southend/Rayleigh per hour with no prospect of Arriva providing an appropriate service in the long term.

Finally, such a large scale development would lead to an unwelcome strip coalescence of built settlements which is not in line with Council policy

The proposal in the Rochford Core Strategy (this is the RDC Policy for local development) for this many houses in the Ward of Hawkwell West is UNSOUND because the vital requirements of PPS12 (this is the Government's Planning Policy) are not met in terms of sustainability, and therefore, the location of Hawkwell West (South Hawkwell) should be removed by The Inspector and the allocation moved to a sustainable location. In summary the reasons that development in this location is unsustainable under PPS12 are as follows:

Regarding the proposed 175 new homes for Hawkwell, Essex.

As residents of Hawkwell and knowing the traffic problems we endure on a daily basis, the increase in housing will cause heavy congestion especially with the limited public transport in our area, also the inability to improve the highways. The distance from the shops and the railway station will cause the new inhabitants to use their cars.

Our semi rural location is completely unsuitable for such a large development resulting in a loss of character. We will lose even more green belt and wild life. Later with the inability of other countries to provide our country with food this land will be needed for agriculture.

This development will leave our community with no social, economic or environmental benefits whatsoever.

In addition the Core Strategy is UNSOUND because it does not fulfil the principles that are expressly stated in the Core Strategy as it relates to the proposal for Hawkwell. Please see the following:

The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. RDC's strategy proposes a limited number of very large sites around existing settlements. A more suitable approach would be to direct the new H2 housing requirement to a larger number of smaller sites around existing settlements. This would have the following benefits:

- higher reuse of existing infrastructure as opposed to having to provide new infrastructure
 - the increase in traffic load resulting from new housing would be spread around each settlement as opposed to concentrating it into new areas.
 - better integration into the existing housing areas
- Why are large sites more preferable to smaller sites? Where is the evidence?

Full Text: Why is North London Road, Rayleigh the ONLY site in Rayleigh where future housing development is appropriate. No evidence has been provided. An attempt was made in the preferred options document to detail why areas of Rayleigh were less desirable. The consideration for South East Rayleigh development was that it would cause coalescence and accessibility problems for services. This is not true for all sites submitted in this area and I believe that sites submitted would be more beneficial than the proposed North London Road site in Rayleigh. Where is the evidence that each site has been properly considered?

Summary: Why is North London Road, Rayleigh the ONLY site in Rayleigh where future housing development is appropriate. No evidence has been provided. An attempt was made in the preferred options document to detail why areas of Rayleigh were less desirable. The consideration for South East Rayleigh development was that it would cause coalescence and accessibility problems for services. This is not true for all sites submitted in this area and I believe that sites submitted would be more beneficial than the proposed North London Road site in Rayleigh. Where is the evidence that each site has been properly considered?

Change to Plan The report should detail the process that was employed to identify the North London Road site as the "best" for development. It should also detail the reasons why it is the only site considered for housing development. RDC should also consider each submitted site on its own merits and not make assumptions such as all sites submitted in SE rayleigh would cause coalescence and service accessibility problems. Provide the evidence and demonstrate diligence!

Full Text: Objection to Rochford Core Strategy, 175 houses in Hawkwell is UNSOUND.

We wish to bring to your notice our objections of the above proposal on the following grounds:-

TRAVEL

Public transport limited (1 bus per hour which stops running after 6.30 p.m.)
Increased car use on an already busy road.
Rectory Road is very narrow and winding with no possibility to improve, and Main Road is also heavily used.
The shops are a great distance from the site.
Both Hockley and Rochford railway stations are a great distance to the site.

ENVIRONMENT

Semi rural location unsuitable for large development
Complete loss of character. Hawkwell has already seen large scale development in Hill Lane area, Bosworth Close, Spencers Nursery etc.
Loss of more Green Belt land.
Disturbance and loss of wildlife.
NO benefits to the community, economic, social or environmental.

SERVICES

Schools, Doctors, Dentists, Sewage, water are all already over-stretched.

We hope you will take all these things into consideration and alter your Core Strategy.

Summary:

TRAVEL

Public transport limited (1 bus per hour which stops running after 6.30 p.m.)

Rectory Road is very narrow and winding with no possibility to improve, and Main Road is also heavily used.
The shops are a great distance from the site.
Both Hockley and Rochford railway stations are a great distance to the site.

ENVIRONMENT

Semi rural location unsuitable for large development
Complete loss of character. Hawkwell has already seen large scale development in Hill Lane area, Bosworth Close, Spencers Nursery etc.
Loss of more Green Belt land.
Disturbance and loss of wildlife.
NO benefits to the community, economic, social or environmental.

SERVICES

Schools, Doctors, Dentists, Sewage, water are all already over-stretched.

We hope you will take all these things into consideration and alter your Core Strategy.

Full Text:

The proposal in the Rochford Core Strategy for this many houses in the Ward of Hawkwell West is UNSOUND because the vital requirements of PPS12 are not met in terms of sustainability, and therefore, the location of Hawkwell West should be removed by the Inspector and the allocation moved to a sustainable location. In summary the reasons that development in this location is unsustainable under PPS12 are as follows:

TRAVEL

limited public transport
increased car use causing heavy congestion
inability to improve highways
distance from shops
distance from rail stations

ENVIRONMENT

semi rural location unsuitable for large development
complete loss of character
loss of green belt
loss of wildlife
NO social, economic or environmental benefits whatsoever.

In addition the Core Strategy is UNSOUND because it does not fulfil the principles that are expressly stated in the Core Strategy as it relates to the proposal for Hawkwell.

The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. No such benefits would apply to this location and development would be materially detrimental to the character of the existing settlement in Hawkwell West. It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected'. This limit has already been exceeded in Hawkwell West.

The Core Strategy says 'locate development in areas where alternatives to car use are more viable', 'reduce the requirement to travel', and accompany any development with requisite highway infrastructure to 'mitigate their impact on the existing network'. It is not possible to do this in Hawkwell West as there is no space for development of local roads, especially in Rectory Road, and any development here would increase the requirement to travel, especially by car. Moving on to Public Transport the Core Strategy states that 'planning should be well related to existing public transport where possible'. There is just one bus to and from Southend/Rayleigh per hour with no prospect of Arriva providing an appropriate service in the long term.

Finally, such a large scale development would lead to an unwelcome strip coalescence of built settlements which is not in line with Council policy.

We trust our objections will be noted and our voice will be heard.

Summary:

TRAVEL

limited public transport
increased car use causing heavy congestion
inability to improve highways
distance from shops
distance from rail stations

ENVIRONMENT

semi rural location unsuitable for large development
complete loss of character
loss of green belt
loss of wildlife
NO social, economic or environmental benefits whatsoever.

Full Text:

We are writing to object to the Rochford Core Strategy of allowing the construction of 175 houses in the ward of Hawkwell West, we consider that this strategy is unsound because the vital requirements of PPS 12 are not met in terms of sustainability, and that therefore the location of Hawkwell West should be removed by the Inspector and the allocation moved to a sustainable location.

You have invited comments in relation to the planning merits of this core strategy, a strategy that we believe the vast majority of local residents oppose due to the large number of dwellings proposed to be constructed on green belt land with resulting loss of natural wildlife habitat.

My wife was born in Hawkwell in the late 1940's and we have lived in either Hockley or Hawkwell for all of our married life, and for the last 29 years in Rectory Road at the above address.

Throughout all of that time housing developments of one sort or another have taken place within the Parish boundaries: Spencers on the site of the former Spencer Nursery, White Hart Lane, Victor Gardens, Hillside Avenue and at various locations in Main Road Hawkwell eg the site of the former Hawkwell Primary School, Hookers Garage and shops on White Hart Hill demolished with houses being built in their place.

What all of these residential developments have in common is that the number of homes being built were of a size that could be assimilated comfortably within the existing village community and in the main did not detract from the pleasant semi-rural environment of Hawkwell.

The core strategy proposal is for 175 homes to be built on an adjoining parcel of green belt land in Rectory Road thereby creating a huge new housing estate that will be approximately ¼ times larger than any other previous single development in Hawkwell.

The result - should this development be approved - will be the destruction of a natural nature reserve and the loss forever of the pleasant rural environment of Hawkwell which is the main reason that most current residents have chosen to live in the area.

Our specific objections to the proposal are briefly detailed as follows not necessarily in any order or importance:-

Building on existing green belt land.

A 175 home estate is far too large for a relatively small village

Infrastructure of Hawkwell is inadequate to cope with the demands of a development of this size.

175 new houses means at least another 300/400 daily cars on our already congested roads - B1013 is one of the busiest B roads in the country.

Doctors surgeries, Schools and Dentists are full to overflowing and our Fire Service is a retained one not permanently manned.

The proposed site for development is at a considerable distance from shops and railway stations.

The local bus service has been reduced giving few options to travel other than by private car.

Rectory Road from Clements Hall to Nursery Corner is very narrow with buses and lorries having great difficulty in passing.

In the morning rush hour the traffic down Rectory Road to Nursery Corner is already very congested often backing up way past the entrance to the Clements Hall Sports Centre.

The area proposed for development abounds with wildlife: muntjac deer, badgers, foxes and numerous birds currently reside on the land.

Trees and hedging would be lost to be replaced with a concrete jungle.

Living as we do opposite the Christmas Tree Farm we recognize that the charge of 'nimbyism' is likely to be levelled against us and it is obvious that we are one of the families most affected by this proposed development, however we

Core Strategy Submission Document

O - 15803 - 9728 - Policy H2 - Extensions to residential envelopes and phasing - i

15803 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

understand that villages and communities evolve and that part of this process results in increased levels of housing.

Our main objection therefore is the size of the development on green belt land, a development that if permitted will destroy the rural ambience and character of Hawkwell for ever.

The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. No such benefits would apply to this location and development would be materially detrimental to the character of the existing settlement in Hawkwell West. It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected'. This limit has already been exceeded in Hawkwell West.

Finally we would question the demand eg a number of the flats built at the top of White Hart Hill remain unoccupied some 2 years after completion.

Full Text:

The planning system exists to ensure that the public interest is taken into account when a new development is proposed, and that new development does not harm the environment. Clearly the proposed development on the land between Main Road and Rectory Road and Clements Hall Hockley fails in the objectives of public interest and environmental impact.

If the council examined the area and current infrastructure, it is clear that:

Transport systems are poor

Traffic congestion through Rectory Road from Main Road and Ashingdon Road is currently a serious issue.

Due to the current housing framework there is no possibility to extend/improve current highways.

It has inadequate Primary and Secondary School facilities

It is inadequately served by shopping facilities.

The distance to train stations is such that links for other transport systems (buses) are essential.

Clements Hall Sports Centre already attracts a high volume of traffic from 7am to 10pm daily.

There are no social benefits of any kind of development for the local community on this green belt land.

The area currently supports a significant wild life population, with examples from Roe deer to common newt, which has been enhanced by the Spencer's Park rural development.

The Proposed Development.

Whether the proposal was 30 or 300 houses the conclusion would be the same. The impact on social and environment levels would be seriously detrimental, and offer no economical benefits to the local economy.

Due to the low level of local industry travel by car is essential due to inadequate Public Transport facilities. Increasing the local population by as little as 30 households would be detrimental, 175 to 350 disastrous. Clearly a development where car use is minimised would be far more in keeping with current government directives.

Additional vehicular access to Rectory Road, and Clements Hall Way would significantly impact on what is already a high throughput road link for traffic moving between Main Road and Ashingdon Road, in addition to the traffic to and from Clements Hall Sports Centre.

There is a requirement for more housing in the district however the intensity of housing in the Hawkwell West area already exceeds current facilities and further development would seriously effect the character and existing education, road and education framework.

The environmental impact of this proposed development should not be underestimated. The stretch of land forms a link between other green belt areas and supports a significant wild life population, including badger, fox, roe deer, and a significant bird and amphibian population.

To the point:

Rochford core strategy for 175 houses this is UNSOUND.

Full Text: Objection to Rochford Core Strategy, 175 houses in Hawkwell is UNSOUND.

The proposal in the Rochford Core Strategy for this many houses in the Hawkwell West Ward is UNSOUND for the following reasons,

Travel - Limited public transport (one bus per hour)
The present road infrastructure (B1013) has difficulty in coping with the heavy congestion each peak time of the day.
There are no shops in the immediate vicinity.
Any building would be quite a distance from the railway stations (where parking is at present at a premium).

Environment - The present semi-rural location is unsuitable for a large development complete loss of character and loss of green belt land.
There would be loss of wildlife and there would be no social, economic or environment benefit to the area whatsoever.

In addition the Core Strategy is UNSOUND because it does not fulfil the principles that are expressly stated in the Core Strategy as it relates to the proposal for Hawkwell.

I trust that you will consider my objections when the planning application comes before the committee.

Full Text: Objection to Rochford Core Strategy 175 houses in Hawkwell.

This letter is to register our objection to the proposed new development in Hawkwell West, as detailed above and we would expect these objections are taken into account prior to any decisions being made. The objections are as detailed below:

The proposed development would increase pressure on the already limited public transport system and the increased car usage would cause additional heavy conjection on local roads. The distance from both shops and rail stations is again totally unacceptable as is the inability to improve highways.

The impact on the environment is also unacceptable with the obvious loss of green belt and wildlife that depends on it. A large development in our semi rural location can only have an adverse affect on our community and would cause a significant downturn in the local character of the area.

Additionally the development would have no social, economic or environmental benefits whatsoever and in that basis the whole idea should be scrapped. I believe that our objections show the proposed development is in direct conflict with the Rochford Core Strategy.

Full Text:

I am writing to object to the above proposal as so many new houses in the ward of Hawkwell West is UNSOUND because the vital requirements of PPS 12 are not met in terms of sustainability and therefore the location of Hawkwell West should be removed by the Inspector and the allocation moved to a sustainable location. My reasons are as follows:

We have limited public transport with only one bus an hour between Rayleigh and Southend. There is little or no possibility that this situation will change in the long term. The railway station is not within comfortable walking distance of the planned site. The local shops are not close by. Because of these factors, transport by car will be vital and the existing roads are already over congested and will not be able to sustain the extra volumes of traffic generated by such a large number of new houses.

Hawkwell is a beautiful semi-rural area which will be destroyed by the loss of valuable green belt. The population would be greatly increased almost overnight and the character of this village would be destroyed. There is currently an abundance of varied wild life living on the planned site which would be lost forever. To sum up, there are NO social, economic or environmental benefits whatsoever with regard to this plan.

In addition the Core Strategy is UNSOUND because it does not fulfil the principles expressed therein as follows:

The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. No such benefits would apply to this location and development would be materially detrimental to the character of Hawkwell West. It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected'. This limit has already been exceeded in Hawkwell West.

The Core Strategy says 'locate development in areas where alternatives to car use are more viable'. As stated above, this is not possible in Hawkwell West. The Core Strategy also states that 'planning should be well related to existing public transport where possible', 'reduce the requirement to travel' and accompany any development with requisite highway infrastructure to 'mitigate their impact on the existing network'. There is no space in Hawkwell West for the development of local roads. As I have already explained above, there is little likelihood that public transport in this area would be improved. Finally, such a large scale development would lead to an unwelcome accumulation of new build houses disproportionate to the area which is not in line with Council policy.

Full Text: 175 new houses in Hawkwell (Rochford Core Strategy)

We are writing to lodge our objections to the above as we believe these proposals to be unsound.

Under the Governments planning policy the terms of sustainability have not been met.

The Councils strategy provides opportunities for environmental, economic and social benefits but there would be no such benefits for Hawkwell under these schemes.

As regards travel, there is no way to mitigate the use of the car as the railway station is not within walking distance for many people. The public bus service is not an alternative and is not customer friendly and unlikely to be much improved in the future.

To summaries:

- 1 - loss of green belt and wildlife
- 2 - no benefits for Hawkwell residents
- 3 - loss of parish character
- 4 - large development not required (Hawkwell already has the most populated area in the district)
- 5 - not possible to improve roads (already heavy congestion)
- 6 - insufficient public transport
- 7 - distance from amenities

The proposal in the Rochford Core Strategy for this many houses in the Ward of Hawkwell West is unsound because the vital requirements of PPS12 are not met in terms of sustainability, and therefore, the location of Hawkwell West should be removed by the Inspector and the allocation moved to a sustainable location. In summary the reasons that development in this location is unsustainable under PPS12 are as follows:

TRAVEL

limited public transport
increased car use causing heavy congestion
inability to improve highways
distance from shops
distance from rail stations

ENVIRONMENT

semi rural location unsuitable for large development
complete loss of character
loss of green belt
loss of wildlife
NO social, economic or environmental benefits whatsoever.

In addition the Core Strategy is UNSOUND because it does not fulfil the principles that are expressly stated in the Core Strategy as it relates to the proposal for Hawkwell. Please see the following:

The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. No such benefits would apply to this location and development would be materially detrimental to the character of the existing settlement in Hawkwell West. It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected'. This limit has already been exceeded in Hawkwell West.

It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected'. This limit has already been exceeded in Hawkwell West.

The Core Strategy says 'local development in areas where alternatives to car use are more viable reduce the requirement to travel', and accompany any development with requisite highway infrastructure to 'mitigate their impact on the existing network'. It is not possible to do this in Hawkwell West as there is no space for development of local roads, especially in Rectory Road, and any development here would increase the requirement to travel, especially by car. Moving on to Public Transport the Core Strategy states that 'planning should be well related to existing public transport where possible'. There is just one bus to and from Southend/Rayleigh per hour with no prospect of Arriva providing an appropriate service in the long term.

Finally such a large scale development would lead to an unwelcome strip coalescence of built settlements which is not in line with Council policy.

Summary:

In summary the reasons that development in this location is unsustainable under PPS12 are as follows:

TRAVEL

limited public transport
increased car use causing heavy congestion
inability to improve highways
distance from shops
distance from rail stations

ENVIRONMENT

semi rural location unsuitable for large development
complete loss of character

Core Strategy Submission Document

15832 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

loss of green belt
loss of wildlife
NO social, economic or environmental benefits whatsoever.

In addition the Core Strategy is UNSOUND because it does not fulfil the principles that are expressly stated in the Core Strategy as it relates to the proposal for Hawkwell. Please see the following:

The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. No such benefits would apply to this location and development would be materially detrimental to the character of the existing settlement in Hawkwell West. It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected'. This limit has already been exceeded in Hawkwell West.

The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Respondent: Mr and Mrs Buckingham [14084]

14 Spencers
Hawkwell
Essex
SS5 4LW

Agent: N/A

Full Text:

We are writing to object against the above application for planning permission in Hawkwell. The proposal in the Rochford Core Strategy for this many houses in the ward of Hawkwell West is unsound because the vital requirements of PPS12 are not met in terms of sustainability and therefore should not be under consideration for a housing development and a new SUSTAINABLE site should be sought. Our reasons for objection are as follows:

Traffic issues - A proposal of 150 houses - many households have two cars or more - this at the minimum of 2 cars per household lead to an extra 300+ cars on the road. There is already congestion at peak times at the mini-roundabout junction of Rectory Road and Main Road.

Distance from shops - the main shops at both Hockley and Golden Cross are a half hour walk away - we are encouraged to shop locally and try not to use cars but this development would only mean more use of cars.

Distance from rail stations - again both Hockley and Rochford Station are a distance from proposed development.

There is very limited access to public buses - just one bus per hour to/from Southend/Rayleigh.

The core strategy says 'locate development in areas where alternatives to car use are more viable', 'reduce the requirement to travel', and accompany any development with requisite highway infrastructure to 'mitigate their impact on the existing network'. It is not possible to do this in Hawkwell West as there is no space for development of local roads, especially in Rectory Road and any development would only increase the requirement to travel by road (examples testify to this as per above bullet points).

Environment issues - loss of greenbelt, loss of wildlife habitats, area is characterized by having rural areas - local people appreciate this aspect of living in Hawkwell West - this development gradually erodes the rural element and we end up with a sprawling urban environment which becomes the blight of small parishes across the country. We DO NOT want this to happen in Hawkwell West.

The core strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. We cannot see what such benefits would occur if this development goes ahead. Social benefits? More and more people living on top of one another? Economic benefits? Short-term jobs for builders - a housing development does not generate jobs or income - it is purely a residential dwelling site. Environmental benefits? Destroying existing wildlife habitats and reducing 'green spaces'. People need and enjoy their green and rural spaces. Research has shown the proven psychological health benefits in having access to green spaces and any 'pockets of green space' should be protected accordingly.

Health Services - local primary health care services ie doctors/dentists already running at full capacity - especially with an increasing older population - this development would only add to the pressure of booking in with these services.

Schools - again pressure is put onto local schools with already large class numbers especially if residents with to exercise their right for their children to be allocated a place within their catchment area.

For all of the above reasons, we strongly object to the application for planning permission for a housing development by David Wilson Homes.

Summary:

Our reasons for objection are as follows:

Traffic issues - A proposal of 150 houses - many households have two cars or more - this at the minimum of 2 cars per household lead to an extra 300+ cars on the road. There is already congestion at peak times at the mini-roundabout junction of Rectory Road and Main Road.

Full Text: Objection to Rochford Core Strategy 175 houses in Hawkwell is UNSOUND.

We strongly object to the building of 175 houses in Hawkwell for the following reasons:

1. There is very limited transport for existing residents already and none for a further 175 houses and their families.
2. We are already at breaking point with congestion on the roads and any increase in car numbers would bring the roads in the area to a stand still.
3. There has been no improvement to our highways for some time.
4. The area designated is some distance away from any shops and impossible on foot.
5. The rail station is also too far to walk to, ...more road congestion. As well as parking nuisance.

The core strategy will ruin the character of the area and would be of no benefit whatsoever to the existing settlement in Hawkwell West. It is already over developed and crowded.

The area is semi rural...we need our green belt. We see the development bringing no social or economic benefit.

Full Text: RE: OBJECTION TO ROCHFORD CORE STRATEGY, 175 HOUSES IN HAWKWELL IS UNSOUND

We are writing to strongly oppose the above proposed build and insist that development in this location is unsustainable under PPS12 and list our reasons for this below:

Travel

limited public transport
increased car use causing heavy congestion
inability to improve highways
distance from shops
distance from rail stations.

Environment

semi rural location unsuitable for large development
complete loss of character
loss of green belt
loss of wildlife
no social, economical or environment benefits whatsoever.

Another issue is the high rate of new families that would be moving into the area and the repercussions this may cause to the intake levels available at Schools in the surrounding areas because of the extra influx of children to the area.

Respondent: Mrs Linda Parish [5018]

Autumn Place
Ironwell Lane
Hawkwell
Hockley
Essex
SS5 4JY
England
07930 407908

Agent: N/A

Full Text:

The proposal for development in Rectory Road, Hawkwell West (aka Hawkwell South) is unsound due to non-compliance with the District Councils own criteria in 4.19 of section H1 of the Core Strategy. namely,

* proximity & relationship to existing centres, facilities and services - apart from leisure facilities provided by Clements Hall Leisure centre, there are no other local facilities or services available, Main shops too distant to walk to as are the railway stations in Hockley and Rochford. Virtually no bus service (1 bus per hour which is unreliable to time, none in evening)

* availability of infrastructure - the infrastructure is insufficient to support development of the proposed size in this location. There is traffic congestion now causing delays for people both travelling from Hawkwell to Southend or Rayleigh and motorists who use these roads as "through roads" from Southend/Rochford to the A130 to access the A127 and A12. There is a lack of dentists in the area and the schools cannot support more children. Also, all the "local" schools are not within walking distance.

* potential to reduce private car dependency - this is not possible due to the location in relation to the schools, doctors, shops etc. and lack of bus services

*impact on highway network etc - the impact would be horrendous. Queues of traffic exist now during the morning and evening "rush hours" along Rectory Road, Hall Road and Main Road. If the traffic travels easterly along Rectory Road to Ashingdon Road, this is already congested the length of Ashingdon Road, through Rochford to Southend.

A development on this site will not bring social, economical or environmental benefit to the area.

Summary:

this proposed development does not meet 4 of the criteria specified in 4.19 in section H1 ie. proximity to facilities and services - availability of infrastructure - potential to reduce private car dependency - impact on highway network etc. Also, it would not be socially, economically or environmentally beneficial to the area.

Change to Plan

The Inspector should remove this proposed development in Hawkwell East (South) due to being unsound in compliance with the Rochford District Council's own criteria for new developments. The proposed development of this site is unsustainable with the lack of infrastructure to support it. Surely, this is not legally compliant as this proposal does not meet the requirements laid out to sustain this new development.

Full Text: Whilst the recognition to release green belt land is supported, the proposals to release significant quantities of development in second and third tier settlements below more sustainable settlements like Hockley are unsound. Furthermore the approach is contrary to the RSS policy framework and the provisions of sustainable locations for housing growth espoused in PPS1 and PPS3. The Council's own evidence and lack of strategic evidence on infrastructure and impact on European Habitats further undermines the effectiveness of Policy H2 as drafted to be the most sustainable option.

Summary: Whilst the recognition to release green belt land is supported, the proposals to release significant quantities of development in second and third tier settlements below more sustainable settlements like Hockley are unsound. Furthermore the approach is contrary to the RSS policy framework and the provisions of sustainable locations for housing growth espoused in PPS1 and PPS3. The Council's own evidence and lack of strategic evidence on infrastructure and impact on European Habitats further undermines the effectiveness of Policy H2 as drafted to be the most sustainable option.

Change to Plan The Council's evidence indicates that the release of land at east Ashingdon, south-west Hullbridge and Great Wakering have higher infrastructure costs. The inclusion of growth at Canewdon (a third tier settlement) is wholly unsustainable. Without access to the final SHLAA and viability assessments it is difficult to comment on the deliverability of these options. All locations have limited public transport and fewer services and facilities compared to Hockley and as such the approach is unsound. Policy H2 should be re-drafted to increase the allocation for Hockley at the expense of less sustainable tier two settlements. As currently drafted the LDF directs 59 % of green belt release housing development to top tier settlements and 41 % to second and third tier settlements. There is scant evidence to support the approach in Policy H2 other than the Council's Sustainability Appraisal Report which says it wants to support the rural communities and that greater growth in the towns will harm their character. The absence of a detailed Infrastructure Study and more critically a Habitats Regulation Assessment (given the proximity of growth locations to the Crouch Estuary SPA) at this late stage of the plan preparation process creates considerable uncertainty that the strategy as presented is deliverable and sufficiently flexible to meet the Vision and objectives. This can be resolved by removing or reducing the allocations from second and third tier settlements and re-directing that growth to sustainable locations such as Hockley. A significant advantage of Hockley is that is less proximate to European Habitats than locations such as Canewdon and Great Wakering.

Agent: N/A

Full Text: Whilst the principle of extending the residential envelope is supported, the amount of development identified for land to the north of London Road, Rayleigh, in the period 2015 - 2021, particularly when major new infrastructure is needed, is not supported. PPS3 advocates making the best use of existing resources which should be utilised ahead of making new provision. There is capacity at existing primary schools in other areas of Rayleigh i.e. to the south-east, along with suitable housing land, which subject to a Green Belt review, could provide a sustainable urban extension to the town.

Summary: Whilst the principle of extending the residential envelope is supported, the amount of development identified for land to the north of London Road, Rayleigh, in the period 2015 - 2021, particularly when major new infrastructure is needed, is not supported. PPS3 advocates making the best use of existing resources which should be utilised ahead of making new provision. There is capacity at existing primary schools in other areas of Rayleigh i.e. to the south-east, along with suitable housing land, which subject to a Green Belt review, could provide a sustainable urban extension to the town.

Change to Plan The DPD as currently drafted does not meet the test of soundness. The amount of housing proposed for land to the north of London Road, Rayleigh is overly-reliant on infrastructure improvements to support its development, and therefore delivery is questionable. In order to ensure the delivery of the 5 year land supply, and consistency with national policy, it would be preferable to reduce the amount of housing proposed at London Road to 450 dwellings, and identify an alternative location on the edge of Rayleigh to accommodate 100 dwellings. There are opportunities on the south-east edge of the Town which are accessible, that are able to make best use of existing services and facilities.

Full Text: The proposal in the Rochford Core Strategy (this is the RDC Policy for local development) for this many houses in the Ward of Hawkwell West is UNSOUND because the vital requirements of PPS12 (this is the Government's Planning Policy) are not met in terms of sustainability, and, therefore, the location of Hawkwell West (South Hawkwell) should be removed by The Inspector and the allocation moved to a sustainable location. In summary the reasons that development in this location is unsustainable under PPS12 are as follows;

Travel

- limited public transport
- increased car use causing heavy congestion
- inability to improve highways
- distance from shops
- distance from rail stations

Environment

- semi rural location unsuitable for large development
- complete loss of character
- loss of green belt
- loss of wildlife
- NO social, economic or environmental benefits whatsoever

In addition the Core Strategy is UNSOUND because it does not fulfil the principles that are expressly stated in the Core Strategy as it relates to the proposal for Hawkwell. Please see the following;

The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. No such benefits would apply to this location and development would be materially detrimental to the character of the existing settlement in Hawkwell West. It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected'. This limit has already been exceeded in Hawkwell West.

The Core Strategy says 'locate development in areas where alternatives to car use are more viable', 'reduce the requirement to travel', and accompany any development with requisite highway infrastructure to 'mitigate their impact on the existing network'. It is not possible to do this in Hawkwell West as there is not space for development of local roads, especially in Rectory Road, and any development here would increase the requirement to travel, especially by car. Moving on to Public Transport the Core Strategy states that 'planning should be well related to existing public transport where possible'. There is just one bus to and from Southend/Rayleigh per hour with no prospect of Arriva providing an appropriate service in the long term.

Finally, such a large scale development would lead to an unwelcome strip coalescence of built settlements which is not in line with Council policy.

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Respondent: Cllr Chris Black [14160]

56 Love Lane
Rayleigh
Essex
SS67DX

Agent: N/A

Full Text: - the proposal for 550 houses on 'land north of London Road' is UNSOUND.

As stated in paragraph 6.1 , The national "Planning Policy Guidance Note 2 - Green Belts" ("PPG2") states that the five purposes of including land within the Green Belt are as follows:

- â€¢ To check the unrestricted sprawl of large built-up areas;
 - â€¢ To prevent neighbouring towns from merging into one another;
 - â€¢ To assist in safeguarding the countryside from encroachment;
 - â€¢ To preserve the setting and special character of historic towns; and
 - â€¢ To assist in urban regeneration, by encouraging the recycling of derelict and other urban land
- The Green Belt land "north of London Road " is needed for all five purposes:
- â€¢ It prevents the unrestricted sprawl of western Rayleigh
 - â€¢ It provides a barrier to prevent the ultimate merging of Rayleigh , Rawreth and Wickford.
 - â€¢ It safeguards countryside from encroachment by providing a defensible Green Belt boundary
 - â€¢ It enables an attractive setting of the historic centre of Rayleigh to be seen from the west.
 - â€¢ It should indeed be retained, in order to encourage the use of other 'brownfield sites' which are available but excluded from the plan.

So this land should therefore be RETAINED as Green Belt and the plan as proposed is unsound and contrary to national policy. The proposed use of the adjoining Rawreth Industrial estate for 220 homes (policy ED3) provides a suitable number of new dwellings for this location.

Summary: The land "north of London Road " is needed for all five Green Belt purposes:

- â€¢ It prevents the unrestricted sprawl of western Rayleigh
- â€¢ It provides a barrier to prevent the ultimate merging of Rayleigh , Rawreth and Wickford.
- â€¢ It safeguards countryside from encroachment by providing a defensible Green Belt boundary
- â€¢ It enables an attractive setting of the historic centre of Rayleigh to be seen from the west.
- â€¢ It should indeed be retained, in order to encourage the use of other 'brownfield sites' which are available but excluded from the plan.

Change to Plan The 'land north of London Road should be removed from the proposals and several smaller brownfield sites should be used instead.

Full Text: We believe it to be unsound; the chosen green belt in the north of Rayleigh is not the best location for hundreds of homes. The impact of housing within the green belt could be reduced if more suitable small green belt sites are included. There is a suitable site to the south of Rayleigh adjoining the residential area of Weir Farm Road, Hollytree gardens, Kingswood Crescent and Western Road, where a number of homes could be built. No coalescence with a neighbouring community would exist and it could provide positive community benefits including a primary school as in CLT2.

Summary: We believe it to be unsound; the chosen green belt in the north of Rayleigh is not the best location for hundreds of homes. The impact of housing within the green belt could be reduced if more suitable small green belt sites are included. There is a suitable site to the south of Rayleigh adjoining the residential area of Weir Farm Road, Hollytree gardens, Kingswood Crescent and Western Road, where a number of homes could be built. No coalescence with a neighbouring community would exist and it could provide positive community benefits including a primary school as in CLT2.

Change to Plan To lessen the impact of hundreds of homes in a single green belt location such as the north of Rayleigh the release of small well located green belt sites like to the south of Rayleigh adjoining the residential area of Weir Farm Road, Hollytree gardens, Kingswood Crescent and Western Road will be considered. A limited number of homes here is possible plus no coalescence with a neighbouring community exists; it could also provide positive community benefits such as a primary school as specified in CLT2.

H2 Extensions to residential envelopes and phasing.

1. Loss of Green Belt

West Rochford has been identified as bearing the largest extension to the current residential envelope with the proposed loss of greenbelt land to accommodate a total of 600 homes by 2021. This cannot be said to be a balanced strategy (para 4.18) when considering the population statistics (para 2.21) which places the settlement tier of Rochford/Ashingdon 3rd in terms of size behind Rayleigh and Hawkwell/Hockley.

The proposal to reallocate Green Belt land for housing on such a large scale (more than 50% of the housing proposed to be on land currently Green Belt) cannot be viewed as having a minimal impact. The Town and Country Planning (Green Belt) Directive 2005 final regulatory impact statement when considering the size of development that would be potentially harmful to the green belt and should require referral to the Secretary of State states (para 21) that a site which roughly equates to ten new, average-size dwellings broadly represents the scale of development around which there is the potential for significant impact on the openness of the Green Belt.

PPG2 provides the Governments policy on Green Belts and the intentions of the policy are set out in para 1.4:-

The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the most important attribute of Green Belts is their openness. Green Belts can shape patterns of urban development at sub-regional and regional scale, and help to ensure that development occurs in locations allocated in development plans. They help to protect the countryside, be it in agricultural, forestry or other use.

The purpose of including land in Green Belts is set out at 1.5 :-

- * to check the unrestricted sprawl of large built-up areas;
- * to prevent neighbouring towns from merging into one another;
- * to assist in safeguarding the countryside from encroachment;
- * to preserve the setting and special character of historic towns; and
- * to assist in urban regeneration, by encouraging the recycling of derelict and other urban land.

PPG2 para1.6 states:-

Once Green Belts have been defined, the use of land in them has a positive role to play in fulfilling the following objectives:

- to provide opportunities for access to the open countryside for the urban population;
- to provide opportunities for outdoor sport and outdoor recreation near urban areas;
- to retain attractive landscapes, and enhance landscapes, near to where people live;
- to improve damaged and derelict land around towns;
- to secure nature conservation interest; and
- to retain land in agricultural, forestry and related uses.

The proposals in the Core Strategy in relation to Green Belt land do not comply with these objectives and will lead to urban sprawl particularly in the area of West Rochford.

Although not site specific the Key Diagram attached to the Core Strategy shows a triangle of land immediately west of Oak Road as proposed for development and further research has demonstrated this to be the case.

This area has a particular character which will clearly be lost if large scale development is permitted. PPG2 states at para 2.6 that once the general extent of a Green Belt has been approved it should be altered only in exceptional circumstances. If such an alteration is proposed the Secretary of State will wish to be satisfied that the authority has considered opportunities for development within the urban areas contained by and beyond the Green Belt. Similarly, detailed Green Belt boundaries defined in adopted local plans or earlier approved development plans should be altered only exceptionally. Detailed boundaries should not be altered or development allowed merely because the land has become derelict.

Core Strategy Submission Document

O - 16163 - 12947 - Policy H2 - Extensions to residential envelopes and phasing - ii, iii

16163 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

A need for such a large number of homes has not been demonstrated and in April 2001 there were 761 empty dwellings in Rochford and the trend has shown an increase in vacant dwellings as by April 2006 there were 996 empty homes which indicates that demand has plateaued. Furthermore two developments designed and built especially for the elderly in Rochford prior to the economic problems still have units unsold.

2. Agricultural Land

In so far as any development proposals include agricultural land the need has to be observed of the future requirements of feeding the country in view of the serious concerns for world food shortages and the estimated large increase in the population of the world and particularly this country. It will not be environmentally acceptable to pursue a policy of importing food which could be grown in this country. Sent under separate cover (email), is an article from the business edition of the Daily Telegraph dated 13th October 2009 and stressed in that article is the second paragraph which refers to the shortage of quality farmland as the global population expands. The agricultural land on the north side of Hall Road is top quality (Grade one) and is a prime example of land which will be needed in the future.

3. Social Housing

The Housing Waiting list statistics shown at para 2.38 of the consultation document shows 44.4% of the demand for social housing to be located in Rayleigh against 29% for Rochford. There is therefore a greater need for social housing in Rayleigh and the Core Strategy does not indicate that a greater proportion of social housing will be provided in Rayleigh. Furthermore no statistics have been provided in respect of the Housing Waiting List so it is unclear as to the exact extent of the need for social housing in the district

PPG2 para 3.2 states:-

Inappropriate development is, by definition, harmful to the Green Belt. It is for the applicant to show why permission should be granted. Very special circumstances to justify inappropriate development will not exist unless the harm by reason of inappropriateness, and any other harm, is clearly outweighed by other considerations. In view of the presumption against inappropriate development, the Secretary of State will attach substantial weight to the harm to the Green Belt when considering any planning application or appeal concerning such development.

3.4 The construction of new buildings inside a Green Belt is inappropriate unless it is for the following purposes:

- agriculture and forestry (unless permitted development rights have been withdrawn);
- essential facilities for outdoor sport and outdoor recreation, for cemeteries, and for other uses of land which preserve the openness of the Green Belt and which do not conflict with the purposes of including land in it;
- limited extension, alteration or replacement of existing dwellings;
- limited infilling in existing villages, and limited affordable housing for local community needs under development plan policies according with PPG3,
- limited infilling or redevelopment of major existing developed sites identified in adopted local plans, which meets the criteria in paragraph C3 or C4 of Annex C1.

As land proposed to be developed is in the Green Belt these policies should apply to the proposals for reallocation.

4. Roads and Transport

Traffic congestion in Hall Road and on the outskirts of Rochford town is a frequent occurrence particularly at peak times. Additional development in west Rochford on the scale proposed will force additional traffic on to both Hall Road and Cherry Orchard Way and thence on to the A127 or via Warners Bridge towards Southend Town Centre - both routes are regularly congested. The junction improvements proposed will not solve the issue because it was acknowledged in the East of England Plan paras 4.57 and 4.58 that in the morning peak period traffic flows on the A127 already exceed capacity in the westbound direction which is expected to become worse by 2031. It is also acknowledged that traffic flows already exceed capacity on several sections of the A13 and are forecast to increase further. There is currently no bus service serving Hall Road or Cherry Orchard Way. It was also acknowledged in the Core Strategy document that 84% of households have cars.

If the employment proposals north of Aviation Way which have been included as part of the airport expansion and development scheme proceed the traffic impact would be even worse. Furthermore the pedestrian access under the bridge at Rochford station already poses dangers to pedestrians particularly for those in wheelchairs and prams with no potential for access improvements. The increased traffic flow generated by development proposals will exacerbate the dangers.

Emergency services must be able to gain access to incidents and a significant further increase in traffic flows that will result from these proposals will jeopardise their effective operation.

A full transport assessment is required to ensure the provisions of PPG13 para 23 can be met before reallocating green belt land and ensure achievement of the key planning objective set out in para 19 of PPG13 to ensure that developments are accessible by public transport walking and cycling to promote social inclusion particularly for those who do not have regular use of a car. The emphasis in the Core Strategy on social housing provision makes this requirement particularly important. Para 40 of PPG13 requires that this same policy should be applied in rural areas where public transport is less available.

5. Water supply

Para 4.70 of the East of England Plan showed a deficit of -50 -20 mega litres per day and further acknowledges that unless the supply of water and related infrastructure is improved it will be a barrier to development from 2015. Any

Full Text: Policy H2 - Extensions to residential envelopes and phasing and Appendix H1

We acknowledge that this policy for the Core Strategy appropriately sets out the broad areas for extensions to residential envelopes and phasing. However it does not clearly identify the release of green field land and does not identify specific areas, although it is implied that this would involve redefining the Green Belt Boundary.

The identification to extend the existing settlement of Hockley is wholly supported. However the justification for the proposal to extend the envelope and phasing for only West Hockley is unclear. There is no objection to the principle of extending West Hockley; however the LDF should ensure that land allocations are evenly spread both throughout the plan period and throughout Hockley.

Summary: Observations and suggestions relating to the identification to extend the existing settlement of Hockley.

Change to Plan It is felt that areas in North Hockley should also be considered for expansion which would make a valuable contribution to the existing community, and with suitable accessibility and connection with public transport.

Accordingly the policy should be amended to omit "West" from West Hockley and also in Appendix H1. On the key diagram the symbol identifying extensions to residential development should be non-site specific and relate clearly to the settlement as a whole in order not to prejudge actual land release.

Full Text: We support the proposed extensions to residential envelopes.

The Council intend to maintain a flexible approach on phasing of housing. We would suggest the policy would be made more sound if the indicative housing provision for each settlement were regarded as a approximate figure and that the final housing provision be established through the Allocations development plan document.

For consistency with other policies, including the Regional Spatial Strategy where the housing provision is identified as a minimum figure, Policy H2 should expressly state that the housing provision for each settlement represents the minimum housing provision.

Agent: N/A

Full Text: Object to 220 houses on Rawreth Industrial Estate & 550 houses North of London Road Rayleigh.

This part of Rayleigh has been extensively developed over the last 1-15 years with the character of the area now changed dramatically. The area is now one big housing development and the roads are now very busy.

Since the development and construction of the additional houses on the old Reads Nursery site, traffic in Downhall Park Way (especially from the junction with Rawreth Lane to Sweyne Park) is very busy and dangerous with cars parked all along the road and near junctions.

Additional traffic along Rawreth Lane will create further delays when using this area.

Any new housing should be developed in other parts of Rochford as Rayleigh has now been overdeveloped.

Summary: Object due to overdevelopment of Rayleigh.

Change to Plan Housing to be built in other parts of Rochford.

Full Text: The proposed releases of land for development at Hullbridge and Canewdon are considered to be unsustainable and therefore unsound. New housing should be directed to those areas with a close and more sustainable relationship with Southend including the second tier settlement of Great Wakering which is wrongly omitted as a location for expansion prior to 2021. Development to the south-west of Great Wakering would successfully relate to the Star Lane Industrial Estate which is earmarked under Policy H1 for residential use.

Summary: The proposed releases of land for development at Hullbridge and Canewdon are considered to be unsustainable and therefore unsound. New housing should be directed to those areas with a close and more sustainable relationship with Southend including the second tier settlement of Great Wakering which is wrongly omitted as a location for expansion prior to 2021. Development to the south-west of Great Wakering would successfully relate to the Star Lane Industrial Estate which is earmarked under Policy H1 for residential use.

Change to Plan Policy H2 should be amended to exclude South West Hullbridge and South Canewdon. This dwelling provision should be redistributed between first tier settlements and Great Wakering, specifically (in relation to the latter) land to the south-west of Great Wakering. This approach will be sound because it will accord with the principles of sustainable development as set out in national planning policy and the RSS.

Full Text:

In our view, the Core Strategy is unsound because draft Policy H2 is neither justified nor consistent with National Policy.

Whilst our clients, Stolkin and Clements (Southend) LLP, agree that it is sound to designate green belt land for residential development; the areas designated in Policies H2 and H3 are not the most appropriate areas and land at Tithe Park, should be designated within Policy H2/H3 for c. 390 dwellings.

We have previously submitted a masterplan for Tithe Park during the preferred options consultation and this masterplan is provided again for information.

Consistency with National Policy

Policy H2 is unsound because it is not consistent with the following National Policy:-

PPS1 provides the overarching Government planning advice for the delivery of sustainable development through the planning system.

Paragraph 13 sets out the key principles:

(i) "Development plans should ensure that sustainable development is pursued in an integrated manner, in line with the principles for sustainable development set out in the UK strategy. Regional planning bodies and local planning authorities should ensure that development plans promote outcomes in which environmental, economic and social objectives are achieved together over time.

(ii) Regional planning bodies and local planning authorities should ensure that development plans contribute to global sustainability by addressing the causes and potential impacts of climate change - through policies which reduce energy use, reduce emissions (for example, by encouraging patterns of development which reduce the need to travel by private car, or reduce the impact of moving freight), promote the development of renewable energy resources, and take climate change impacts into account in the location and design of development."

Paragraph 16 of PPS1 confirms that development plans should address accessibility (both in terms of location and physical access) for all members of the community to jobs, health, housing, education, shops, leisure and community facilities. Paragraph 27 (v) reiterates this, stating that, in preparing development plan documents, planning authorities should seek to ensure that everyone can access services or facilities on foot, bicycle or public transport rather than having to rely on access by car, whilst recognising that this may be more difficult in rural areas.

Paragraph 20 confirms that development plan policies should take into account the protection of the wider countryside and the impact of the proposed development on landscape quality.

PPS3 sets out the national planning policy framework for delivering the Government's housing objectives. Paragraph 36 states that the Government's policy is to ensure that housing is developed in suitable locations which offer a range of community facilities and with good access to jobs, key services and infrastructure.

PPG13 sets out the Government's planning guidance on transport planning. Paragraph 4 sets out the following objectives:-

1. promote more sustainable transport choices for both people and for moving freight;
2. promote accessibility to jobs, shopping, leisure facilities and services by public transport, walking and cycling, and
3. reduce the need to travel, especially by car.

In summary the Core Strategy is not consistent with the following two objectives of national policy:

- Minimising the need to travel
- Protecting the wider countryside and landscape quality

Minimising the need to travel

Core Strategy Submission Document

16199 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

The Core Strategy Submission Document recognises that a high proportion of the Rochford workforce commutes out of the District, with 30% travelling to work in Southend (Paragraph 2.53).

It states that:-

"the strength of the spheres of influence of the large neighbouring centres of Southend, Basildon and Chelmsford means that traffic is drawn through Rochford District's own centres to them. This not only has an impact on traffic congestion in general, but also engenders concern with regards to air quality within the District's town centres." (Paragraph 2.62)

Paragraph 6.5 of the Core Strategy states that the Council recognises that diverting development and population growth away from rural areas to existing urban areas can assist in achieving sustainability objectives.

Draft Policy H2 proposes various extensions to existing settlements. However, these extensions will inevitably lead to increased car use from a greater number of commuters.

A more sustainable option is to provide a residential extension to Southend on the Tithe Park site.

As detailed in the 'Tithe Park' masterplan (August 2008), the site is within 10 minutes walk of the shopping and associated amenities of the Asda superstore, the local shops situated on the Broadway, Southend, and individual local shops within Shoeburyness. It is within 10 minutes walk of a number of primary and secondary schools. Furthermore, the site is within comfortable cycling distance of Shoeburyness Railway Station with direct links to London Fenchurch Street as well as local stops within Southend including Southend Central Railway Station from where the town centre amenities can easily be accessed. There are also bus stops situated to the south of the site along Eagle Way.

Tithe Park is therefore better connected than some of the other locations set out in Policy H2, for example, South West Hullbridge and South Canewdon, which is not within comfortable cycling distance of a railway station. It will also have no harmful impact on the traffic congestion within Rochford Borough which, some of the other locations suggested in the Core Strategy will as they are likely to be home to commuters to Southend who will travel to Southend everyday by motor car.

Protecting the wider countryside and landscape quality

Draft Policy H2 proposes several extensions to existing settlements. Whilst, the Core Strategy does not allocate specific sites, it is important that the locations set out in Core Strategy Policy H2/ H3 are able to provide sites which are well related to their settlement and do not impact on the surrounding landscape.

Tithe Park abuts the urban area of Southend to the south and west and therefore will have an acceptable impact in terms of the overall openness of the countryside.

Justification

Draft Policy H2 is not sufficiently justified because it is not the most appropriate strategy when considered against reasonable alternatives, as required by paragraphs 4.36 - 4.38 of PPS12 (Justification of Core Strategies). In particular, the proposed location of housing, as an extension to the Southend urban area, is a more sustainable option and therefore a more appropriate strategy.

The Strategic Housing Land Availability Statement (SHLAA) had not been published at the time of the submission version consultation, only a summary table had been produced. It is therefore impossible to understand how Draft Policy H2 is underpinned by this key part of the evidence base.

However, having considered the other documents in the evidence base, including the Strategic Environmental Assessment Baseline Information Profile 2008 - 2009, it is clear that Tithe Park should be considered sequentially preferable to the areas identified in Draft Policy H2. For example:-

- There are a number of local wildlife sites located to the west of Hockley;
- There are areas of Ancient Woodland situated to the west of Hockley;
- West Great Wakering and South Canewdon is situated within the Crouch and Roach Farmland Landscape Area which has a higher landscape sensitivity than the Tithe Park site which is located within the South Essex Coastal Towns Landscape Area; and
- Depending on the sites chosen, there is a possibility that land south west of Hullbridge and east of Ashington will be in Flood Risk Zone 2 or 3

Given these findings it is clear that the proposed sites are not based on a robust and credible evidence base.

Summary:

The Core Strategy is unsound because draft Policy H2 is neither justified nor consistent with National Policy.

The areas designated in Policy H2 are not the most appropriate areas and land at Tithe Park, should be designated within Policy H2/H3 for c. 390 dwellings.

We support the identification of land North of London Road, Rayleigh as one of the allocated growth areas/urban extensions in this policy.

We agree that development should be comprehensively planned, and support the principle of providing a range of other uses and infrastructure to serve any urban extension west of Rayleigh. However, such infrastructure must be reasonably associated with the impacts of the development. The scale and nature of such infrastructure that we could provide will be dependant upon the scale and nature of development accepted on the option land (see further representations below).

Full Text: General amendments sought

Whilst we appreciate that the Core Strategy is not the vehicle to identify the precise boundaries of these residential growth/development areas, we do however consider that the key diagram is too vague and there should be a clearer identification of growth areas. It is not possible to ascertain the extent/location of likely development areas (not just North of London Road) and therefore their relationship to existing residents/road network etc. Therefore it is difficult to know what impact any such development will have on surrounding residents/the road network etc. The Core Strategy can be fairly specific in identifying sites, even if precise boundaries are not defined.

No appropriate density ranges are given within the Core Strategy, so again it is difficult to ascertain the likely land area required to achieve the number of units required/specified.

We believe that appropriate density ranges should be specified (a separate policy). Our considerable experience of urban extensions indicate that typical density ranges are from 35 to 45 dwellings per hectare for a whole site, where these schemes also include large percentages of affordable housing.

Summary: Clarification sought regarding the boundaries of the allocation for North of London Road, Rayleigh, and regarding density parameters.

Full Text: Unsound: (i) not consistent with national policy (ii) not effective (not deliverable/not flexible) (iii) not justified

(1) We consider it unsound as drafted, on the grounds that it fails to be consistent with policy set out in the East of England Plan. Policy H1 of the RSS expresses housing requirements as minimum levels to be achieved and directs planning authorities to similarly express requirements as minimal. To provide certainty that the RSS housing targets will be met (although see representations below), the housing numbers specified in this policy should be expressed as minimums.

(2) We consider that in addition to the need to state that dwelling numbers are minimums, wording should also be added which states that "the actual amount of development will be determined by environmental and infrastructure capacity considerations, and the detailed consideration of master plans for each site", and that "there may be a possible requirement for greater housing numbers on some sites should other sources of housing, such as that on identified appropriate brownfield sites, not come forward as anticipated". We believe this to be a sensible and flexible approach. This will allow for appropriate flexibility in the plan.

(3) We argue that one or more of the greenfield sites identified for 2015 onwards should be brought forward in this policy, to ensure national/regional targets or annual targets are met. Whilst we recognize that the council "will maintain a flexible approach with regards to the timing of the release of land for residential development to ensure a five year supply" (bottom of Policy H2), we consider that there is enough evidence at this time to bring forward one or more of the Greenfield sites now.

Rather than repeat arguments put forward in our representations to Policy H1, we refer you to them in regard to our belief that required (RSS) 5 year housing targets will not be achieved because of an over reliance upon brownfield sites that we believe will not be delivered in the timescales anticipated by the council.

(4) Bearing in mind our representations regarding housing delivery rates and the over reliance placed upon and constraints associated with the development of identified brownfield sites (see policy H1 reps), we argue that as well as bringing forward one or more of the Greenfield sites identified in Policy H2 as 2015-2021, the number of units for one or more of the Greenfield sites be increased to make up for what we consider will be a shortfall in the delivery of housing on brownfield sites. We particularly recommend that because of the significant delivery constraints to the proposed redevelopment of the Rawreth Lane Industrial Estate, further housing units be identified for the land we promote, north of London Road, Rayleigh, as a replacement for the number of units identified for this industrial estate.

Again, rather than repeat arguments put forward in our representations to Policy H1 (see also Policy ED3 reps), we refer you to them in regard to our belief that required (RSS) housing targets will not be able to be achieved for the plan period because of an over reliance upon brownfield sites that we believe will either not be delivered in the timescales anticipated by the council, or may not come forward at all in the plan period.

(5) We refer to the infrastructure requirements for each site set out in Appendix H1, and referred to in this policy.

It should be made explicit that the level of infrastructure to be provided with a development will be reasonably related to the impact of that development. Circular 5/05 and the emerging/published DCLG guidance on the use of CIL, makes it clear that new developments/contributions from new development can not be used to resolve existing deficiencies (only, proportionally, those deficiencies made worse by new development).

Whilst some infrastructure requirements will be required to adhere to other council policies, it should be made clear that the majority of infrastructure requirements for each development site listed in Appendix H1 will be specified in future master plans/planning permissions when the precise impacts of the development are understood and assessed. It would be inappropriate to specify infrastructure requirements at this time when the precise scale and nature of development is not determined.

With regard to (2) to (4) above, we believe that the site we promote, with the addition of land under other ownership north of London Road (west of Rayleigh), can

- A) Be delivered (in part) prior to 2015
- B) Accommodate more than the identified 550 units

Core Strategy Submission Document

O - 16212 - 8650 - Policy H2 - Extensions to residential envelopes and phasing - ii, iii

16212 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

A) In terms of the land which we promote, there are no on or off-site hindrances to delivery that we are aware of in terms of infrastructure requirements e.g. no highway or service infrastructure constraints. The land we promote is in single ownership (to which we have an option), so there are no land assembly issues. Whilst other land ownerships north of London road could be included within the development of this area e.g. council owned sport pitch area, we are confident that there will not be any significant delay in bringing forward such land as part of a comprehensive development scheme for the area.

The site was in fact identified as being required by 2015 in the Preferred Options version of the Core Strategy, and we have received no justification from the council as to why it is now identified as being required for the period of 2015-2021.

We believe that development of our site could commence as soon as the site has a defined/adopted development allocation and boundary, and planning permission is granted. We are happy to discuss with the council the appropriate timing of submission of any planning application and how this would affect the timing of commencement of development/delivery of units. We are happy to fast track a planning application if the council consider this appropriate and would be required this to meet housing targets/needs.

We had set out a possible delivery timetable for the site we promote in our representations to the SHLAA consultation in April 2009. We suggested that for us to achieve the provision of 450 units (or a range of 400 to 500 units) by 2015 for example, planning permission would need to be granted by, at latest, early to mid 2012 (so an application submitted prior to the end of 2011). With time then required to achieve the submission and sign off of any pre-commencement requirements, and to account for a lead in time prior to commencement of infrastructure works, it is likely that development could then commence by early 2013 (first occupations prior to the end of that year).

We would currently envisage a build rate of between 200 to 250 housing units a year. This is of course dependant upon a number of factors, particularly regarding affordable housing delivery, such as the level of affordable housing grant available and location of such housing/pepper potting.

B) We believe that the land we have under option, on its own or with land north of London Road in other ownerships, can provide for more than 550 units.

In fact, 650 units were identified in the Preferred Options version of the Core Strategy. We have not been informed by the council (there is no explanation in the Core strategy) why the number identified for this area has been reduced. There is no reasoning/justification within the Core Strategy as to why the figure of 550 units has been chosen.

We consider the key factor in limiting the number of units is the issue of defining where the appropriate revised green belt boundary should be set for the western edge of any development west of Rayleigh. We consider that there are a number of possible options for the green belt boundary, but a boundary could easily be drawn to enable enough land to be developed for a greater number of units, without further detriment to the landscape and character of the area, or without causing any coalescence with properties in Rawreth Village.

We are able, on the land under our option, to provide for a significant strategic gap or buffer between any new development and Rawreth village and the A1245. Significant green infrastructure could be incorporated into this space, and/or the land remain, in part, in agricultural use if considered appropriate. The nature and use of the strategic gap and location of open space will be determined through a master plan for the site.

We will work with the council to bring forward the strategic growth of land north of London Road as early as possible/appropriate to help ensure that the RSS targets are being met.

We consider that of the Greenfield sites identified in the plan, land north of London Road Rayleigh (land under our control) should accommodate greater numbers of dwellings.

The reasons for this is that Rayleigh, by far, is the most sustainable location for growth in Rochford, and land to the west of Rayleigh, north of London Road, the most appropriate, accessible and sustainable location for an urban extension to Rayleigh (as evidenced by its choice as the only urban extension to Rayleigh in the Core Strategy). Other possible sites considered for Rayleigh have serious policy, environmental or access/capacity constraints to delivery.

Rayleigh has the greatest variety and widest base of retail and other services of any settlement in Rochford. It also benefits from being the most accessible in terms of strategic highway links and capacity (particularly the western side of Rayleigh), and has the largest population and town centre. It has the highest housing waiting list demand and therefore probably the highest demand for affordable housing. With a new employment "park" also being identified for west of Rayleigh, a greater variety of job offers should also be available.

We are surprised that planned housing growth however, as set out in both policies H2 and H3, distribute numbers fairly evenly over first and second tier settlements, even though Rayleigh is clearly the largest and most sustainable town/location for development.

Combined (total) green belt allocations, set out in policies H2 & H3 lead to:

Tier 1

Core Strategy Submission Document

O - 16212 - 8650 - Policy H2 - Extensions to residential envelopes and phasing - ii, iii

16212 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Rayleigh 550 units (2001 population 30,196)
Rochford/Ashingdon 1200 units (combined population 10,775)
Hockley/Hawkwell 225 units (combined population 20,140)

Tier 2
Hullbridge 500 units (pop 6,445)
Great Wakering 250 units (pop 5,512)

When you take into account that some of the larger identified brownfield development sites in Rayleigh are not likely to come forward in the plan period, particularly Rawreth Industrial Estate (220 units), there appears to be very little growth in Rayleigh when considered against other less sustainable towns/locations in Rochford. Whilst Rayleigh has experienced more growth in previous years than other towns, this is not a reason alone to direct larger development quantum to other, less sustainable locations.

Therefore, for the above reasons, we believe that the Core Strategy be amended to identify a larger allocation of dwelling numbers for land North of London Road, Rayleigh.

Summary:

1. the housing numbers specified in this policy should be expressed as minimums.
2. A change of wording is suggested to ensure flexibility
3. one or more of the greenfield sites identified for 2015 onwards should be brought forward in this policy
4. the number of units for one or more of the Greenfield sites be increased to make up for what we consider will be a shortfall in the delivery of housing on brownfield sites.
5. the level of infrastructure to be provided with a development will be reasonably related to the impact of that development.

Change to Plan

Changes necessary to make Policy H2 sound

Whilst we consider that these matters are of sufficient importance to question the soundness of the Plan as drafted, we do not consider that it goes to the heart of the plan. We consider that minor changes proposed by the EiP Inspector, or made by the Borough Council in response to our representations, can be made as part of the Examination process, to make the plan sound.

1. We would propose that the housing requirements for each strategic growth site be expressed as a minimum in accordance with the RSS for the East of England.
2. We put forward the following additional words for Policy H2: "the actual amount of development will be determined by environmental and infrastructure capacity considerations, and the detailed consideration of master plans for each site" and that "there may be a possible requirement for greater housing numbers on some sites should other sources of housing, such as that on identified appropriate brownfield sites, not come forward as anticipated".
3. Land North of London Road, Rayleigh, should be brought forward from "Dwellings 2015 to 2021" to the "Dwellings by 2015" period.
4. The council provides justification as to why only 550 units have been identified for North of London Road, Rayleigh (as opposed to the 650 units identified in the Preferred Options or a higher number), and why Rayleigh has a relatively small growth allocation compared to other less sustainable towns. After further consideration by the council of the deliverability of identified brownfield sites (in the SHLAA) in Rayleigh (and Rochford as a whole), particularly with regard to the proposed redevelopment of the larger existing employment sites such as the Rawreth Lane Industrial Estate, the numbers allocated for Rayleigh (North of London Road), be increased. Please see also our representations regarding the deliverability of the Rawreth Lane Industrial Estate in Policies H1 and ED3.
5. It should be made explicit that the level of infrastructure to be provided with a development will be reasonably related to the impact of that development and that infrastructure requirements for each site listed in Appendix H1 will be specified in future master plans/planning permissions when the precise impacts of the development are understood and assessed.

We agree with the general locations and phasing of residential properties over the plan period, however, in light of the current economic conditions and the need to maintain an adequate five year supply; the policy needs to adopt a flexible approach with regards the timing and release of land for residential development.

In order to ensure flexibility, this policy needs to make reference to Policy H3, in case the locations allocated under Policy H2 do not come forward in the required timeframe or deliver the required number of dwellings.

Fourth Paragraph - amend as follows:

The Council will maintain a flexible approach with regards to the timing of the release of land for residential development to ensure a constant five-year supply of land. If the locations within Policy H2 do not come forward in the required timeframe or deliver the required number of dwellings, then locations with Policy H3 should be brought forward to address this shortfall.

The proposal in the Rochford Core Strategy for this many houses in the Ward of Hawkwell West is UNSOUND because the vital requirements of PPS12 are not met in terms of sustainability, and, therefore, the location of Hawkwell West (South Hawkwell) should be removed by The Inspector and the allocation moved to a sustainable location. In summary the reasons that development in this location is unsustainable under PPS12 are as follows:

Travel

- limited public transport
- increased car use causing heavy congestion
- inability to improve highways
- distance from shops
- distance from rail stations

Environment

- semi rural location unsuitable for large development
- complete loss of character
- loss of green belt
- loss of wildlife
- NO social, economic or environmental benefits whatsoever

In addition the Core Strategy is UNSOUND because it does not fulfil the principles that are expressly stated in the Core Strategy as it relates to the proposal for Hawkwell.

For all the aforementioned reasons, we have come to the conclusion that we must strongly object to Rochford District Council's plans to allow 175 new houses to be built in Hawkwell.

Full Text: Objection to Rochford Core Strategy 175 new houses in Hawkwell is UNSOUND.

Further to my previous Emails, your letter dated 14th September and an E-invitation from Kay Tinson, I wish to register, once again, my objections to the proposed development as captioned above.

The Rochford Core Strategy (RCS) proposal for the Ward of Hawkwell West is unsound because the location cannot sustain this many houses under the terms of the Government's Planning Policy PPS12.

The RCS is intended to protect the character of existing settlements and specifically '...seeks to take advantage of development opportunities that will provide social, economic and environmental benefits...'

However, it is difficult to see where any such benefits would arise from this settlement, whereas its detrimental effect on the character of Hawkwell is patently obvious.

The RCS states that '...there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected..' and yet this proposed development screams out as an example of plugging a green gap to complete yet another strip coalescence of built settlements in Hawkwell - using an unsustainable number of dwellings.

The Christmas Tree farm is part and parcel of Hawkwell West and is also a mini eco-system in itself. Building up this area would destroy another green area of Hawkwell with the resultant loss of character and wildlife, for the sake of an unsustainable and unbeneficial development.

The RCS intends to:

'..reduce the requirement to travel...'
have planning '...well related to existing public transport where possible...'
'..locate development in areas where alternatives to car use are more viable...' and
'...mitigate the impact on the existing network...'

However, the proposed development doesn't tick any of these boxes.

The requirement to travel, whether from 175 or 330 houses, will occur and remain because the site is near neither the shops, nor the railway station, nor any local amenities - with the exception of the leisure centre, which usually has a busy car park!

The planning for this site clearly doesn't relate to existing public transport since it is not within reasonable walking distance of Hockley or Rochford railway stations and Hawkwell is served by but one bus per hour, from Rayleigh and Southend h no immediate prospect for change).

Given the above, new residents will use their cars out of necessity and this will add to the horrendous congestion problem that already exists on the B1013 Main Road in Hawkwell and Rectory Road. Such has been the increase in volume of traffic using the B1013 over the last few years - at all times of the day; not only during the rush hour and not only during the week - that it is becoming a question of if rather than when you can cross the road (on foot) or join the main highway from a side road (by car). I encounter both problems on a daily basis and I know that any additional traffic would inevitably exacerbate this problem.

Furthermore, there is no prospect of mitigating the impact of additional traffic because there is no room to develop the highway infrastructure on either of the aforementioned roads (B1013 and Rectory Road) which surround the proposed development.

In short, there is a piece of land in Hawkwell which could accommodate a number of new houses...but even the most basic research shows that in terms of location, environment, character and infrastrucutre, any development of that site would be unsustainable.

Therefore I suggest that the proposed development is UNSOUND.

Summary: The Rochford Core Strategy (RCS) proposal for the Ward of Hawkwell West is unsound because the location cannot sustain this many houses under the terms of the Government's Planning Policy PPS12.

In short, there is a piece of land in Hawkwell which could accommodate a number of new houses...but even the most

Further to our recent correspondence on this subject in September and to your letter dated 21 September 2009, concerning the Core Strategy Pre-Submission Consultation, my wife and I wish to re-affirm that the proposal in the Rochford Core Strategy, for this many houses in the ward of Hawkwell West is UNSOUND, because the vital requirements of PPS12, are not met in terms of sustainability and therefore, the location of Hawkwell West (South Hawkwell), should be removed by the inspector and the allocation moved to a sustainable location. In summary the reasons that development in this location is unsustainable under PPS12 are as follows:

Travel:

The public transport system in the Rectory Road area is totally inadequate, with buses to Rayleigh or Southend on an hourly schedule, in spite of repeated appeals to the bus company to considerably improve all services around this area, there is little response.

As nearly all of the schools, shops and railway stations are a considerable walking distance from the village, this means that the car is the regular means of transport to all of these places, which at certain times of the day already causes heavy congestion at the main junctions in Rectory Road. The proposal to build such a large number of houses in the middle of Hawkwell village, would increase the number of vehicle movements by possibly another 1500 per day, which would bring Rectory Road to a complete standstill as there is no real possibility to widen or improve the other highways in the area. The increase in air pollution on people living along this road would be totally unacceptable.

Environment:

Our village of Hawkwell is in a semi rural location, which is unsuitable for a large development such as this. The proposal for a housing estate in the middle of the village, would be totally out of character within a lovely green belt area that has sustained the village for hundreds of years in different forms. The proposed area is a haven for all kinds of wildlife and to concrete over this area would be irresponsible and would surely cause untold flooding in the area, with only a small brook to accommodate the water which would naturally be absorbed in the woodland areas. Clearly there are no social, economic or environmental benefits whatsoever, to be gained by such a development in this area of natural beauty.

In addition the Core Strategy is UNSOUND because it does not fulfil the principles that are expressly stated in the Core Strategy as it relates to the proposal for Hawkwell. Please see the following:

The Core Strategy talks about protecting the character of the existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. No such benefits would apply to this location and development would be materially detrimental to the character of the existing settlement in Hawkwell West. It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected'. This limit has already been exceeded in Hawkwell West.

The Core Strategy says 'locate development in areas where alternatives to car use are more viable', 'reduce the requirements to travel' and accompany any development with requisite highway infrastructure to 'mitigate their impact on the existing network'. It is not possible to do this in Hawkwell West as there is no space for development of local roads, especially in Rectory Road and any development here would increase the requirement to travel, especially by car. Moving on to public transport the Core Strategy states that 'planning should be well related to existing public transport where possible'. There is just one bus to and from Southend/Rayleigh per hour with no prospect of Arriva providing an appropriate service in the long term.

Finally, such a large scale development would lead to an unwelcome strip coalescence of built settlements which is not in line with Council policy.

In consideration of the aforementioned points, we trust that the council will reject any future development in the village of Hawkwell.

Summary: Reference: Objection to Rochford Core Strategy, 175 houses in Hawkwell is UNSOUND.

Full Text: Objection to Rochford Core Strategy, 175 houses in Hawkwell is UNSOUND.

I am writing to object to the above proposal as so many new houses in the ward of Hawkwell West is UNSOUND because the vital requirements of PPS12 are not met in terms of sustainability and therefore the location of Hawkwell West should be removed by the Inspection and the allocation moved to a sustainable location. My reasons are as follows:

We have limited public transport with only one bus an hour between Rayleigh and Southend. There is little or no possibility that this situation will change in the long term. The railway station is not within comfortable walking distance of the planned site. The local shops are not close by. Because of these factors, transport by car will be vital and the existing roads are already over congested and will not be able to sustain the extra volumes of traffic generated by such a large number of new houses.

Hawkwell is a beautiful semi-rural area which will be destroyed by the loss of valuable green belt. The population would be greatly increased almost overnight and the character of this village would be destroyed. There is currently an abundance of varied wild life living on the planned site which would be lost forever. To sum up, there are NO social, economic or environmental benefits whatsoever with regard to this plan.

In addition the Core Strategy is UNSOUND because it does not fulfil the principles expressed therein as follows:

The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. No such benefits would apply to this location and development would be materially detrimental to the character of Hawkwell West. It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected'. This limit has already been exceeded in Hawkwell West.

The Core Strategy says 'locate development in areas where alternatives to car use are more viable'. As stated above, this is not possible in Hawkwell West. The Core Strategy also states that 'planning should be well related to existing public transport where possible', 'reduce the requirement to travel' and accompany any development with requisite highway infrastructure to 'mitigate their impact on the existing network'. There is no space in Hawkwell West for the development of local roads. As I have already explained above, there is little likelihood that public transport in this area would be improved. Finally, such a large scale development would lead to an unwelcome accumulation of new build houses disproportionate to the area which is not in line with Council policy.

Summary: Objection to Rochford Core Strategy, 175 houses in Hawkwell is UNSOUND.

2. Objection to Planning Application of 330 houses by David Wilson Homes.

Summary:

Objection to Rochford Core Strategy of 175 houses in Hawkwell is unsound because the vital requirements of PPS12 are not met in terms of sustainability. It is unsustainable under the PPS12 as follows:

TRAVEL - we have very limited public transport and even buses are often cut out for no reason
increase of cars
inability to improve highways
distance from shops and railway

ENVIRONMENT - semi rural location unsuitable for large development
loss of character
loss of green belt (green belt was protected by past governments and even if it is only 1% now what about the percentages taken in future. Green belt is sacrosanct!
loss of wildlife
NO social, economic or environmental benefits whatsoever.

Full Text: Re: Objection to the Core Strategy, 175 houses in Hawkwell is unsound.

I am writing to object to the proposed housing development in Hawkwell. I believe it to be unsound because of the requirements of PPS12 are not met in terms of sustainability. Therefore the proposal should be removed by the inspector and moved to a sustainable location.

It is unsustainable because of the following:

1. There is a very limited, and deteriorating, public transport service here.
2. There are already serious bottlenecks at the Rectory Road railway bridge and at Nursery Corner, ie either side of the proposed development site.
3. There are no alternatives for the increased numbers of vehicular movements and no prospect of road improvements.
4. There are no shops or railway stations within walking distance, therefore there will be even more vehicle movements. See 2 above.
5. We are in a semi rural loction here. It is not suitable for a large development. We have lost a large part of the identity and character of Hawkwell over the years because of the so-called Ribbon development and all the in-fill building that has been allowed and seemingly encouraged by RDC.
6. The loss of more Green Belt land is not acceptable.
7. There will be significant loss of wildlife and habitat. If not immediately then surely in the future. Learn the previous lessons from around the world that when we interfere with nature it always comes back to bite in one way or another.
8. I am unable to see any social or economic benefits within the proposed development. There is only one business close by that will gain, that being Clements Hall. Surely that gain will only be marginal.
9. This whole proposal is not in keeping with the existing core strategy. It does not benefit Hawkwell socially, economically or environmentally. It will intensify the housing density, affecting the character of Hawkwell. It is not related to existing public transport availability. It certainly will not reduce the requirement to travel or be any help to people already living in Hawkwell that travel on a daily basis.

Summary: I am writing to object to the proposed housing development in Hawkwell. I believe it to be unsound because of the requirements of PPS12 are not met in terms of sustainability.

It is unsustainable because of the following:

Full Text: Objection to Rochford Core Strategy, 175 houses in Hawkwell UNSOUND

The proposal in the Rochford Core Strategy for this many houses in the Ward of Hawkwell West is UNSOUND because the vital requirements of PPS12 are not met in terms of sustainability and, therefore, the location of Hawkwell West should be removed by The Inspector and the allocation moved to a sustainable location. In summary the reasons that development in this location is unsustainable under PPS12 are as follows:

1. Travel

1. Rectory Road has always been busy and since the development of Cherry Orchard Way this has been exacerbated by a constant stream of traffic with queues forming at the Nursery Corner/B1013 junction throughout the day but especially during the morning and evening rush hours. It cannot take any more feeder roads.
2. The proposal for 330 new dwellings will mean more cars. As most households now have at least two cars the number of journeys per day could increase by 1500, there would also be the extra traffic caused by tradesmen, the services eg gas, electric etc and visitors to the new residents.
3. Rectory Road is also used by very heavy lorries serving, among other places the sports centre and a local farm at Windsor Road, these vehicles have great difficulty negotiating the nursery corner junction and regularly mount the grass verges.
4. For pedestrians, crossing the roads to get to the bus stop at this very busy junction is extremely dangerous because of the speed of traffic and the very limited vision.
5. The area has one bus an hour to Southend or Rayleigh, there is NO BUS SERVICE AFTER 6.30pm. ACCORDING TO THE LATEST TIME TABLE ISSUED BY ARRIVA! (Except on Saturday 7.30pm.) This makes a mockery of the intention to limit car usage!
6. There are no schools within safe walking distance.
7. There are no safe cycle tracks. The road is far too dangerous for any but the most competent cyclist.
8. The walk to Hockley rail station takes 25 minutes, to Rochford rail station it takes 40 minutes.
9. The one lane, traffic light controlled section of Rectory Road at the railway bridge causes a bottleneck and discourages drivers from using the eastern end of the road.

2. Environment

1. The development proposed would completely ruin the character of the area. The site proposed consists of mature shrub-land and woodland that has remained undisturbed for decades. It supports a great variety of wild life and is a natural appendage to the more open habitat provided by the adjacent Spencer's Park. The consequent loss of wildlife can not be justified.
2. The area absorbs a great amount of rain water and is a natural defence against flooding in the area. The brook and pond bordering Spencer's Park is only adequate to contain present rain water levels and could hardly cope with the extra pressure put on it from this development.
3. The density of the proposed development is three times greater than that of surrounding properties. Currently this is mainly a low level building area consisting mainly of bungalows, the proposed two and three storey buildings will be totally out of character.
4. There seems to be little provision for the influx of younger people, particularly teenagers who will require social facilities that are easily and cheaply available. The provisional figure of 30 school age children by David Wilson Homes is grossly underestimated.
5. The traffic movement implications have been dealt with under 'travel' above but the provision of a few footpaths and cycle tracks will in no way be adequate. These youngsters will not even have a safe walk to their various schools owing to the density and speed of the traffic using Rectory Road and/or the B1013.
6. Depending on the size and nature of the businesses in the proposed retail area, there is concern that outlets comprising market leaders will attract shoppers from outside the immediate area thus adding to the congestion on our roads.

In addition the Core Strategy is UNSOUND because it does not fulfil the principles that are expressly stated in the Core Strategy as it relates proposal for Hawkwell. Please see the following:

The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. No such benefits would apply to this location and development would be materially detrimental to the character of the existing settlement in Hawkwell West. It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected'. This limit has already been exceeded in Hawkwell West.

Core Strategy Submission Document

16405 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

The core strategy says 'locate development in areas where alternatives to car use are more viable', 'reduce the requirement to travel' and accompany any development with the requisite highway infrastructure to 'mitigate their impact on the existing network'. It is not possible to do this in Hawkwell West as there is no space for development of local roads, especially in Rectory Road, and any development here would increase the requirement to travel, especially by car. Moving on to Public Transport the Core Strategy states that 'planning should be well related to existing public transport where possible'. There is just one bus to and from Southend/Rayleigh per hour with no prospect of Arriva providing an appropriate service in the long term.

Finally, such a large scale development would lead to an unwelcome strip coalescence of built settlements which is not in line with council policy.

Summary:

Full Text: Objection to Rochford Core Strategy, 175 houses in Hawkwell is UNSOUND.

We write this letter with regards to the 175 houses that you wish to build in our community. We strongly object to the building of these houses on our green belt land. This is a semi rural area with a village like feel and this will be lost if building goes ahead. This location just cannot benefit from this development at all. You/they may say they will build extra doctors/health surgeries, schools etc but what about the things that will be lost such as:

loss of green belt
loss of wildlife
a complete loss of character
the fact that the location is unsuitable for large development

The roads just cannot take any extra traffic and there is no space for development on the local roads, especially Rectory Road. We are some distance from the shops and the train station. There is just one bus to and from Southend/Rayleigh per hour and Arriva have no intention of providing an appropriate service in the long term. This means all these extra people will need to travel by car, hence cloggin gup the roads!

We would just like to point out that when we brought our property, we did so because of its location. It was sold to us as semi rural and we thought it an ideal area to raise our family. If we wanted to live and raise our family in the middle of a housing estate, that is what we would have brought!

We strongly urge you to take our points on board and put a stop to this development. Please listen to your community!

Full Text:

I would like to record my objections to the Rochford Core Strategy. 175 additional houses in Hawkwell is for the following reasons a completely unsound strategy.

1. The increase in car use caused by the proposed housing increase will cause even heavier congestion at the Spa junction (Hockley), railway bridge junction (Rochford) and along Rectory Road itself.
2. There is no way the highways can be improved to ease the congestion already in existence and due to the increase should this proposal be implemented can only get worse. Rectory Road is already built up to such an extent the highway cannot be improved enough to cope with the additional traffic envisaged.
3. Shops from Rectory Road area are accessible only by car. Car parking facility at the Main Road and Golden Cross shopping centres are already inadequate during most of the day.
4. Public transport from Hawkwell is almost non-existent. A car ride to the nearest railway station (more road congestion) or one bus per hour to Rayleigh/Southend with no prospect of improved service from Arriva.

The environmental issue is also a very serious issue. Hawkwell is a semi-rural location with Green Belt land and wild life as part of its character. Should this strategy be implemented these characteristics will be lost and the whole character of Hawkwell dramatically changed. I find no social, economic or environmental benefits from the Strategy whatsoever.

The whole strategy is unsound because it fails to follow the Government Planning Policy PPS12 on all the points listed above.

Hawkwell therefore should be exempt from this development and moved to a more sustainable location!

Agent: N/A

Full Text: Local Development Framework Core Strategy Submission

I understand that RDC was under government instruction to come up with a Core Strategy proposal, and I believe that it has done a reasonable job in trying to satisfy each parish. However, I have 2 objections with regard to the soundness of the latest proposal in the Hockley area.

Objection

There is currently a traffic flow issue on the Hockley Road at peak times. With the additional proposed housing allocations in Rochford, Hawkwell and Hockley, and the associated increase in number of vehicles, the Spa roundabout in Hockley will become gridlocked. There is no satisfactory solution provided in the Core Strategy submission to overcome the problem of road networks. There is no inexpensive solution to the growing problem. Also, no account has been taken of the further increased traffic related to the proposed airport expansion.

Objection

The latest version of the Core Strategy proposes to relocate existing businesses from Eldon Way and Foundry Industrial Estates in Hockley to greenbelt land in the vicinity of Southend Airport, and to redevelop the estates for commercial, retail, leisure, community, and residential purposes. The number of proposed residential units is not stated independently in the proposal (although it is shown in the Hockley Town Centre Development Plan), but is reported to be 150 - 200 dwellings. The previous version of the Core Strategy did not show any additional housing in the centre of Hockley.

The Hockley Parish Plan (published October 2007) states that there should be no new large housing estates in Hockley due to insufficient infrastructure in terms of schools, healthcare, leisure facilities and road networks. It also states that there should be no loss of greenbelt or open spaces due to housing development. Both of these conditions are broken by the Eldon Way proposal.

The Parish Plan also discusses the traffic flow issues in the centre of Hockley and the approach roads from Rayleigh, Rochford and Ashingdon. The local roads are narrow and could not cope with the additional vehicles generated by 150 - 200 new dwellings in the centre of Hockley, and would be unbearable during the development period with a constant flow of construction lorries.

In a recent Resident Survey in Hockley, completed in October 2009, with reference to Hockley Centre Redevelopment, 87% of responses were against moving businesses out of Eldon Way to make way for major redevelopment, and if redevelopment was enforced, the least favoured type of development was shown to be residential units with just over 1% of response support.

Summary:

Objection

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Respondent: Mr David Jefferies [9614]

1 Thorpe Road
Hockley
Hawkwell
SS5 4EP
UK

Agent: N/A

Full Text: Objection to Rochford Core Strategy, 175 houses in Hawkwell IS UNSOUND

The proposal in the Rochford Core Strategy (the RDC Policy for local development) for this many houses in the Ward of Hawkwell West is UNSOUND because the vital requirements of PPS12 (the Government's Planning Policy) are not met in terms of sustainability, and, therefore, the location of Hawkwell West (South Hawkwell) should be removed by The Inspector and the allocation moved to a sustainable location.

In summary the reasons that development in this location is unsustainable under PPS12 are as follows:

1) Travel

- limited public transport;
- increased car use causing heavy congestion;
- inability to improve highways;
- distance from shops; and
- distance from rail stations.

2) Environment

- semi-rural location unsuitable for large development;
- complete loss of character;
- loss of green belt;
- loss of wildlife; and
- NO social, economic or environmental benefits whatsoever.

In addition, the Core Strategy is UNSOUND because it does not fulfil the principles that are expressly stated in the Core Strategy as it relates to the proposal for Hawkwell.

The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. No such benefits would apply to this location and development would be materially detrimental to the character of the existing settlement in Hawkwell West. It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected'. This limit has already been exceeded in Hawkwell West.

The Core Strategy says 'locate development in areas where alternatives to car use are more viable', 'reduce the requirement to travel', and accompany any development with requisite highway infrastructure to 'mitigate their impact on the existing network'. It is not possible to do this in Hawkwell West, as there is no space for development of local roads, especially in Rectory Road, and any development here would increase the requirement to travel, especially by car. Moving on to Public Transport the Core Strategy states that 'planning should be well related to existing public transport where possible'. There is just one bus to and from Southend/Rayleigh per hour with no prospect of Arriva providing an appropriate service in the long term.

Finally, such a large scale development would lead to an unwelcome strip coalescence of built settlements which is not in line with Council policy.

Summary:

The proposal in the Rochford Core Strategy (the RDC Policy for local development) for this many houses in the Ward of Hawkwell West is UNSOUND because the vital requirements of PPS12 (the Government's Planning Policy) are not met in terms of sustainability. In summary the reasons that development in this location is unsustainable under PPS12 are as follows:

1) Travel

- limited public transport;
- increased car use causing heavy congestion;
- inability to improve highways;
- distance from shops; and
- distance from rail stations.

2) Environment

- semi-rural location unsuitable for large development;
- complete loss of character;
- loss of green belt;
- loss of wildlife; and
- NO social, economic or environmental benefits whatsoever.

In addition, the Core Strategy is UNSOUND because it does not fulfil the principles that are expressly stated in the Core

Core Strategy Submission Document

16429 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Strategy as it relates to the proposal for Hawkwell.

The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. No such benefits would apply to this location and development would be materially detrimental to the character of the existing settlement in Hawkwell West. It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected'. This limit has already been exceeded in Hawkwell West.

The Core Strategy says 'locate development in areas where alternatives to car use are more viable', 'reduce the requirement to travel', and accompany any development with requisite highway infrastructure to 'mitigate their impact on the existing network'. It is not possible to do this in Hawkwell West, as there is no space for development of local roads, especially in Rectory Road, and any development here would increase the requirement to travel, especially by car. Moving on to Public Transport the Core Strategy states that 'planning should be well related to existing public transport where possible'. There is just one bus to and from Southend/Rayleigh per hour with no prospect of Arriva providing an appropriate service in the long term.

Finally, such a large scale development would lead to an unwelcome strip coalescence of built settlements which is not in line with Council policy.

Change to Plan The location of Hawkwell West (South Hawkwell) should be removed by The Inspector and the allocation moved to a sustainable location.

Full Text: We are objecting to the proposed building of 175 houses on Green Belt Land in Hawkwell. the main reasons for our objection are:

TRAVEL

- We have very limited public transport
- Which will add to the already congested roads (try getting out of our road at peak times)
- inability to improve highways
- distance from shops causing more people to use their cars and clog up the roads
- distance from railway stations

ENVIRONMENT

- our beautiful semi-rural location should be left as just that it is not suitable for large development
- the character of the area would be lost for ever bigger is not better
- the loss of our very important Green Belt which should remain to fulfill the job it was intended to do
- where will the wildlife go? It is already under extreme pressure we don't need hunting or culling just count the fox and badger corpses on our roads
- We can see NO social, economic or environmental benefits that these plans would bring.

Full Text:

I am writing to object to the above proposal as so many new houses in the ward of Hawkwell West is UNSOUND because the vital requirements of PPS 12 are not met in terms of sustainability and therefore the location of Hawkwell West should be removed by the Inspector and the allocation moved to a sustainable location. My reasons are as follows:

We have limited public transport with only one bus an hour between Rayleigh and Southend. There is little or no possibility that this situation will change in the long term. The railway station is not within comfortable walking distance of the planned site. The local shops are not close by. Because of these factors, transport by car will be vital and the existing roads are already over congested and will not be able to sustain the extra volumes of traffic generated by such a large number of new houses.

Hawkwell is a beautiful semi-rural area which will be destroyed by the loss of valuable green belt. The population would be greatly increased almost overnight and the character of this village would be destroyed. There is currently an abundance of varied wild life living on the planned site which would be lost forever. To sum up, there are NO social, economic or environmental benefits whatsoever with regard to this plan.

In addition the Core Strategy is UNSOUND because it does not fulfil the principles expressed therein as follows:

The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. No such benefits would apply to this location and development would be materially detrimental to the character of Hawkwell West. It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected'. This limit has already been exceeded in Hawkwell West.

The Core Strategy says 'locate development in areas where alternatives to car use are more viable'. As stated above, this is not possible in Hawkwell West. The Core Strategy also states that 'planning should be well related to existing public transport where possible', 'reduce the requirement to travel' and accompany any development with requisite highway infrastructure to 'mitigate their impact on the existing network'. There is no space in Hawkwell West for the development of local roads. As I have already explained above, there is little likelihood that public transport in this area would be improved. Finally, such a large scale development would lead to an unwelcome accumulation of new build houses disproportionate to the area which is not in line with Council policy.

Summary:

I am writing to object to the above proposal as so many new houses in the ward of Hawkwell West is UNSOUND because the vital requirements of PPS 12 are not met in terms of sustainability. My reasons are as follows:

We have limited public transport with only one bus an hour between Rayleigh and Southend. There is little or no possibility that this situation will change in the long term. Full Text:

I am writing to express my objection to the Rochford Core Strategy which proposes to add 175 houses to the ward of West Hawkwell. My understanding is that the strategy is intended to take advantage of development opportunities which provide social, economic and environmental benefits to the community. In fact there are no such benefits. However there are considerable disbenefits.

The roads in the area are already extremely busy in particular the B1013 and Rectory Road with a particular bottleneck at their junction. There is no ability to improve them particularly as each is accessed via a low and narrow railway bridge. Additional house will add yet more traffic compounded by the extremely limited public transport available to travel to the natural shopping areas to the east in Rochford and the west in Hockley. I fail to see how this squares within the strategy's aim of locating development where alternatives to car use are more viable.

There will be a loss of green belt land and an adverse effect on wild life. This will lead to a loss of the semi rural characters of the area. Indeed the strategy notes that there is a limit to the how much infilling and intensification existing settlements can sustain without their character being adversely affected. This limit has been reached in West Hawkwell. An increase in housing of the size envisaged is likely to lead to a continuous strip of urban development stretching from Rochford to Hawkwell destroying the separate identity of both.

For the above reasons I contend that the part of the core strategy related to Hawkwell West is unsound because it is not justified and should be deleted.

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Respondent: Rawreth Parish Council (Mrs H Bloomfield) [7342] **Agent:** N/A

Rawreth Parish Council
103 Downhall Park
Way Rayleigh
Essex
SS6 9QZ
01268 631821

Full Text:

LDF - Preferred Options - Rayleigh conurbation.

On behalf of Rawreth Parish Council I confirm that this letter is a formal response of objection to the final draft of Rochford District Councils Core Strategy Preferred Options document.

Firstly, at no time has the Parish of Rawreth been included or mentioned in any "Tier" on page 33 of the document, the criteria for allocation of houses - within the Core Strategy. If it had been included it should have been in Tier 4 and this is, therefore, UNSOUND.

The Parish Council believes that to develop 550 houses in one place within area no: 144, land to the north of London Road and then to add a further 220 to the Rawreth Industrial Estate area will totally destroy the character and rural outlook of Rawreth and surrounding areas. It will destroy the residents' "strong sense of identity within their own settlement" and is, therefore, UNSOUND.

The huge development of 550 houses is totally unacceptable. The land north of London Road is good quality agricultural land which is protected by the Green Belt -GB1 - fulfils all purposes under PPG2 and should be retained as such. Once used for development this land can never be returned to agricultural use, and if you continue to erode into our Green Belt and farmland it will be lost forever.

The Parish Council believe a proportion of the houses required to be built in our area should compliment and enhance Rawreth, cause as little extra congestion to our already heavily overcrowded roads as possible and provide a pleasant environment for those people wishing to move to the area. This particular area is part of the "Gateway to Rochford" and is the "strategic buffer" between Rayleigh and Wickford. Reference is made in the Core Strategy document to "avoiding coalescence" of villages/towns, however a development of this size immediately erodes the buffer between Rayleigh, Rawreth and Wickford, starts coalescence, destroys the rural character of Rawreth and, therefore, is UNSOUND.

The Core Strategy Document details Rochford District Councils priorities and objectives and details how the role of the Core Strategy features in achieving these. In support of the Parish Councils observations and alternative proposals they comment as follows.

Page 5 "Fostering greater community cohesion"

Development of land between Rawreth Lane and north of London Road will not give any community cohesion at all, it will simply be an extension to the west of Rayleigh giving residents no real sense of belonging, they will live within the Parish of Rawreth, yet they will be considered as living in Rayleigh as has been proved with other developments along Rawreth Lane such as Laburnum Way.

Page 12 "Priority 5 Essex roads are safer less congested and everyone has access to essential services"

The roads and infrastructure in the Rawreth area are completely full to capacity. The A127, A1245, A129 London Road, Rawreth Lane and Watery Lane just cannot take any more traffic and the proposed development on land to the north of London Road will increase traffic to a completely unsustainable level. On numerous occasions this year incidents within and on the outskirts of the Parish have brought traffic to a standstill for hours along London Road, Rawreth Lane, Watery Lane/Beeches Road and the Hullbridge Road. It took some residents 1 ¼ hours to proceed along Rawreth Lane and into Hullbridge - a distance of 1 1/2 miles.

The proposed development at the western edge of Hullbridge, which is, in fact, largely in Rawreth would also greatly increase the traffic problems in the area. Rawreth Parish Council understand there would be a proposal to "widen/straighten" Watery Lane/Beeches Road, with a roundabout at the junction with the Hullbridge Road. This is an extremely dangerous junction even at the present time and would become increasingly so. There is also the question of where the traffic would go when it reaches Battlesbridge at the Western end, it cannot possibly cross the Bridge as this is "restricted" and in a Conservation Area, therefore, it would have to turn left and proceed to the A1245 - a very dangerous junction.

Beeches Road/Watery Lane is also shown in the document as a new cyclist route. Surely this is a conflict of interest, a road widening/straightening proposal coupled with a cycle route.

Page 33 "Tier Settlements"

Nowhere in the Core Strategy Document is Rawreth Parish actually mentioned, it features in the "all other settlements tier 4" and is referred to as "land north of London Road Rayleigh" or "West Rayleigh" yet, the housing allocation of 550 dwellings between 2015 and 2021 and the 220 planned for the Rawreth Industrial Estate is the largest that any area is taking. Rawreth Parish currently has 380 dwellings and an electorate of 812, yet the proposed housing figures are set to increase the overall number of dwellings in the Parish by 203%.

Pages 34 to 36 "The efficient use of land for housing" and "Extensions to residential envelopes and phasing"

The Core Strategy Document states that "the Council recognises the importance of making best use of brownfield land" and "whilst the Council acknowledge that the housing requirement stipulated in the East of England Plan is a minimum, it must also be mindful of the need to maintain Green Belt as far as possible" yet the proposed 550 houses on the land

Core Strategy Submission Document

16467 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

north of London Road will all be built on Green Belt land of high agricultural value. The document states that "the Council will direct development to the most sustainable locations on the edge of settlements having regard to:"

"The potential to avoid areas of constraint (such as areas at risk of flooding, sites of ecological importance"

"The historical, agricultural and ecological value of land"

"The potential to create a defensible Green Belt Boundary and

"The avoidance of coalescence with neighbouring settlements"

Yet these key factors all seem to have been ignored when choosing the site to the north of London Road and, therefore, the proposal is UNSOUND. The Parish of Rawreth has a history of flooding, the land in Rawreth Lane will drain into the already overloaded brook system and the Services in the area would be unable to cope with this increase in housing - drains and sewers are already working to capacity. Heavy rain earlier in the year resulted in flooding in Watery Lane and the Rawreth Brook system has been very close to flooding twice already this year. During a meeting between the Parish Council and the Environment Agency we were advised that this situation will worsen with increased housing.

Page 42 "Gypsy and Traveller Accommodation"

This section details the need for an allocation of 15 pitches by 2011, it also states that they "will examine the potential of current unauthorised sites to meet this need" and that "sites will be allocated in the west of the District" The west of the District is in fact Rawreth, but yet again the Parish name has not been detailed. The Parish already has an unauthorised site which is the subject of an enforcement case and although well kept is on the brow of a hill on a main highway with restricted access which Essex County Council have already raised concerns about, this is not a site that should be considered as part of the requirement due to its location, but also, why is the allocation of all 15 pitches being detailed to one area?

Page 43 to 44 "Appendix 1"

Details of all the infrastructure to accompany residential development is listed, yet there are no detailed costs, have these been done? And are these achievable? Large numbers of housing in one area, as stated in the infrastructure requirements, will necessitate a new primary school. County figures suggest that there will be surplus places in Rayleigh schools even with new housing. Obviously these will be in the wrong parts of the town so increasing the risk that an existing school could close. It makes sense to spread the development in smaller sites around the town, avoiding closure and preventing unnecessary provision of a new school.

Page 57 "Strategies, Activities and Actions - The Green Belt"

The document states that "The Council will continue to support the principals of restricting development in the Green Belt, as set out in PPG2 and will preserve the character and openness of the Green Belt" it further states that "a small proportion of the District's Green Belt will have to have its designation reviewed to allow development" The entire development of 550 houses planned for land north of London Road is all on Green Belt land as is the land at Hullbridge, how does this equate to a "small proportion"?

The Councils own Policy GB1- Green Belt Protection states "The Council will allocate the minimum amount of Green Belt land necessary to meet the District's housing and employment needs" and that they will "direct development away from the Green Belt as far as is practicable and will prioritise the protection of the Green Belt land based on how well the land helps achieve the purposes of the Green Belt".

This area of land confirms all 5 purposes of the national PPG2 - Green Belt:-

It prevents the unrestricted sprawl of western Rayleigh

It provides a barrier to prevent the ultimate merging of Rayleigh, Rawreth and Wickford

It assists in safeguarding the countryside from encroachment

It preserves the setting and special character of historic towns

Assists in urban regeneration, by encouraging the recycling of derelict and other urban land

Rawreth Parish Council have observed that there are a number of sites that were put forward in the "Call for Sites" that are pre-used brownfield land in the Green Belt land, and as such would prove beneficial and in their opinion should have been considered for development. Their non-inclusion as "brownfield" sites makes the current proposals

UNSOUND:

Site No; 73 Hambro Nursery a site of approximately 3.93 hectares, coupled with the adjacent site Clovelly, would provide between 200 and 250 houses in an area of approximately 4.85 hectares this area would have good access directly from the A1245 and if expanded north westward to include land up to and around the Village Hall, approximately another 2.08 hectares could produce between 50 and 80 further houses. This area could be accessed either from the slip road (Chelmsford Road) to the south of the Nevendon Garage or from Church Road.

Both of these sites would remove the need for extra traffic along the A129 and Rawreth Lane which are both already operating well over maximum capacity. This development would require a footbridge for pedestrians, cyclists and horses over the A1245.

Rawreth Parish Council believe these proposals would be sensible infill of these areas and would be on "Brownfield" sites where current businesses are not particularly progressive and would not result in the loss of many jobs. Our figures are quite conservative and we believe that if these sites were chosen a much reduced number of houses would need to be built "North of London Road" on Green Belt land.

Phase 2 - With regard to the houses that are proposed for the Northeast corner of Rawreth/Hullbridge, the Parish Council are concerned that any development would cause considerable extra congestion to the immediate roads. We understand that the thoughts are to "straighten" and improve parts of Watery Lane and Beeches Road to provide access to and through Battlesbridge - a conservation area. Recent experience of deep flooding in Watery Lane with the road closed for several days on 3 occasions in the early part of 2009 proves that this proposal is completely unsustainable. The local drainage systems simply cannot take the amount of run-off experienced now and with further development this

Core Strategy Submission Document

16467 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

would increase the problem.

If this development is to go ahead, the Parish Council believe that a relief road should be built, from the end of Watery Lane, skirting to the west of the Rayleigh Park Estate, crossing Rawreth Lane at a mini-roundabout and entering a vastly improved A129 at approximately Lower Barn Farm. This would take any necessary traffic in and out of the area efficiently.

The Parish Council further believe that the Michelins Farm site No: 49 would be an ideal site for the Rawreth Industrial Estate. This would adjoin proposed industrial sites within the Basildon District and would provide excellent road and transport links. Rawreth Parish Council also proposed that the land opposite Michelins Farm could be used to re-site the illegal Gypsy/Traveller site that is currently situated on the busy A1245. The land opposite Michelins Farm would not only be a much safer site for Gypsy/Traveller pitches, but the correct use of the land would also ensure the environmental improvement of the site as a whole.

All of the above proposals were submitted to Rochford District Council, but they were not taken into consideration in the final draft resulting in the predominant use of Green Belt land for development, bounded by already congested roads and, therefore, the proposals are UNSOUND.

Summary:

The Parish Council believes that to develop 550 houses in one place within area no: 144, land to the north of London Road and then to add a further 220 to the Rawreth Industrial Estate area will totally destroy the character and rural outlook of Rawreth and surrounding areas. It will destroy the residents' "strong sense of identity within their own settlement" and is, therefore, UNSOUND.

The huge development of 550 houses is totally unacceptable. The land north of London Road is good quality agricultural land which is protected by the Green Belt -GB1 - fulfils all purposes under PPG2 and should be retained as such. Once used for development this land can never be returned to agricultural use, and if you continue to erode into our Green Belt and farmland it will be lost forever.

The Parish Council believe a proportion of the houses required to be built in our area should compliment and enhance Rawreth, cause as little extra congestion to our already heavily overcrowded roads as possible and provide a pleasant environment for those people wishing to move to the area. This particular area is part of the "Gateway to Rochford" and is the "strategic buffer" between Rayleigh and Wickford. Reference is made in the Core Strategy document to "avoiding coalescence" of villages/towns, however a development of this size immediately erodes the buffer between Rayleigh, Rawreth and Wickford, starts coalescence, destroys the rural character of Rawreth and, therefore, is UNSOUND.

Agent: N/A

Full Text: I wish to object on the grounds of unsoundness or legally non compliant due to the following points:

- Producing a heavy weight document that prevented printing and general distribution was an unfair method of consultation.
 - This document does not fully take into consideration the impact of the JAAP report and the reports for the proposed redevelopment of Hockley, Rochford and Rayleigh.
 - The stated government policy of using 60% brown field sites first before green field seems to have been reversed, with many potential sites for building being of a green field nature.
 - If the 175 homes were to be located in one place it will change the nature of the village. We believe it would be better to spread them throughout the Hawkwell area. Consideration should be given to the proximity of shops and schools as due to the lack of public transport additional car usage would result.
 - That comprehensive consultation has not taken place with ECC, other district councils, local parish / town councils, residents associations and other interested parties in and around our district.
 - The additional homes will put an enormous strain on the infrastructure of our area, particularly the road system, which has not been addressed in the document.
 - Loss of Green Belt in our area, which would change our village into a town.
 - Additional vehicles on the roads from the building of the new homes, the additional residents, their delivery services and visitors and the proposed airport expansion traffic.
 - Additional demand on our doctors and dentists.
 - Additional demand on schools and social services.
 - The number 7 and 8 bus has now been reduced to mainly one bus an hour and there is now no evening number 8 service.
 - Additional demand on gas, electric, telephone, water, sewers and surface / storm water drainage.
 - Moving Eldon Way and the Foundry Estate to a green belt site at the airport area will increase mileage for employees and the lack of public transport will limit employment to car users. We believe cycling would be a poor and unrealistic substitute.
 - ECC have stated that the B1013 is now running at 72% capacity. The Core Strategy proposal would bring the traffic to an unbearable level. No details and estimated costs are given of the many road improvement we believe would be necessary as listed below.
 - This area is enclosed by the River Crouch, the sea and the Thames and is only properly accessed from the west. For this reason we believe the sensible place to locate additional homes would be in the western part of Rochford district.
 - We believe that no major infrastructure improvements have been carried out in the Hawkwell area for more than 30 years. We also believe that the following infrastructure improvements in the Hawkwell / Hockley area, that are not included in the Core Strategy document, should be addressed before any additional homes are built:
1. Replacement of Rectory Road Railway Bridge for two-way traffic.
 2. Computer controlled traffic lights at the Rectory Road / Hall Road junction.
 3. Upgrade Rectory Road and widen road and footpath at the Christmas Tree Farm area.
 4. Upgrade the B1013 Hall Road and provide missing and upgrade existing pavements.
 5. Proper main road street lighting for the B1013 Hall Road and B1013 Rayleigh Road.
 6. A cycle path route from Rochford through Hockley to Rayleigh.
 7. A new pelican crossing in B1013 Main Road near Tudor Way.
 8. Return to two buses an hour in both directions for the 7 and 8 services between Southend and Rayleigh and the return of the 8 evening bus service.
 9. Improvements to all services including gas, electric, telephone, water, sewers and surface / storm water drainage.
 10. Increase capacity at all the local Schools in the area.
 11. Increase capacity at all the local Doctors and Dentists and hospital services in the area.
 12. Increase ambulance, fire and police emergency services.
 13. Provide and run a youth club in the Hawkwell area.
 14. To provide and run allotments in the Hawkwell area.
 15. To extend the existing Cherry Orchard Park to Mount Bovers Lane and Hockley Woods.
 16. Replace the existing Hockley Spa roundabout with a wider traffic light junction complete with pedestrian cross lights.
 17. Install a double mini roundabout at Station Road and Station Approach junction with Spa Road for Hockley Station.
 18. Install a mini roundabout on the B1013 at Folly Lane.
 19. Make up / Upgrade Plumberow Avenue through to Lower Road in Hockley complete with pavements, main road street lighting and a mini roundabout at the Lower Road junction.
 20. Upgrade Watery Lane / Beeches Road in Hullbridge from Lower Road complete with pavements, main road street lighting and a mini roundabout at the Lower Road junction.

16477 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Summary: I wish to object on the grounds of unsoundness or legally non compliant due to the following points:

- Producing a heavy weight document that prevented printing and general distribution was an unfair method of consultation.
- This document does not fully take into consideration the impact of the JAAP report and the reports for the proposed redevelopment of Hockley, Rochford and Rayleigh.
- The stated government policy of using 60% brown field sites first before green field seems to have been reversed, with many potential sites for building being of a green field nature.
- If the 175 homes were to be located in one place it will change the nature of the village. We believe it would be better to spread them throughout the Hawkwell area. Consideration should be given to the proximity of shops and schools as due to the lack of public transport additional car usage would result.
- That comprehensive consultation has not taken place with ECC, other district councils, local parish / town councils, residents associations and other interested parties in and around our district.
- The additional homes will put an enormous strain on the infrastructure of our area, particularly the road system, which has not been addressed in the document.
- Loss of Green Belt in our area, which would change our village into a town.
- Additional vehicles on the roads from the building of the new homes, the additional residents, their delivery services and visitors and the proposed airport expansion traffic.
- Additional demand on our doctors and dentists.
- Additional demand on schools and social services.
- The number 7 and 8 bus has now been reduced to mainly one bus an hour and there is now no evening number 8 service.
- Additional demand on gas, electric, telephone, water, sewers and surface / storm water drainage.
- Moving Eldon Way and the Foundry Estate to a green belt site at the airport area will increase mileage for employees and the lack of public transport will limit employment to car users. We believe cycling would be a poor and unrealistic substitute.
- ECC have stated that the B1013 is now running at 72% capacity. The Core Strategy proposal would bring the traffic to an unbearable level. No details and estimated costs are given of the many road improvement we believe would be necessary as listed below.
- This area is enclosed by the River Crouch, the sea and the Thames and is only properly accessed from the west. For this reason we believe the sensible place to locate additional homes would be in the western part of Rochford district.
- We believe that no major infrastructure improvements have been carried out in the Hawkwell area for more than 30 years.

Change to Plan We also believe that the following infrastructure improvements in the Hawkwell / Hockley area, that are not included in the Core Strategy document, should be addressed before any additional homes are built:

1. Replacement of Rectory Road Railway Bridge for two-way traffic.
2. Computer controlled traffic lights at the Rectory Road / Hall Road junction.
3. Upgrade Rectory Road and widen road and footpath at the Christmas Tree Farm area.
4. Upgrade the B1013 Hall Road and provide missing and upgrade existing pavements.
5. Proper main road street lighting for the B1013 Hall Road and B1013 Rayleigh Road.
6. A cycle path route from Rochford through Hockley to Rayleigh.
7. A new pelican crossing in B1013 Main Road near Tudor Way.
8. Return to two buses an hour in both directions for the 7 and 8 services between Southend and Rayleigh and the return of the 8 evening bus service.
9. Improvements to all services including gas, electric, telephone, water, sewers and surface / storm water drainage.
10. Increase capacity at all the local Schools in the area.
11. Increase capacity at all the local Doctors and Dentists and hospital services in the area.
12. Increase ambulance, fire and police emergency services.
13. Provide and run a youth club in the Hawkwell area.
14. To provide and run allotments in the Hawkwell area.
15. To extend the existing Cherry Orchard Park to Mount Bovers Lane and Hockley Woods.
16. Replace the existing Hockley Spa roundabout with a wider traffic light junction complete with pedestrian cross lights.
17. Install a double mini roundabout at Station Road and Station Approach junction with Spa Road for Hockley Station.
18. Install a mini roundabout on the B1013 at Folly Lane.
19. Make up / Upgrade Plumberow Avenue through to Lower Road in Hockley complete with pavements, main road street lighting and a mini roundabout at the Lower Road junction.
20. Upgrade Watery Lane / Beeches Road in Hullbridge from Lower Road complete with pavements, main road street lighting and a mini roundabout at the Lower Road junction.

Full Text:

As explained in other representations submitted on behalf of the Aston Unit Trust and Mr J Needs, the Core Strategy fails to set out a long term, robust and flexible strategy for development as required under PPS12. Policy H2 compounds these concerns by being inflexible and distributing greenfield allocations in a manner which is contrary to the Council's objectives and will not deliver a pattern of sustainable development.

The main deficiencies of Policy H2 are

- (a) there is no reason to split the housing provision between H2 (pre 2021) and Policy H3 (post 2021). The Core Strategy should contain a single allocations policy dealing with the full plan period of at least 15 years. By separating the sites into two periods, there is no clear mechanism to (for example) accelerate H3 sites if there is a shortfall in the H2 sites
- (b) there is no contingency strategy if any of the H2 sites fail to come forward or guidance on what sites should be additionally allocated if other parts of the land supply fail
- (c) the number of dwellings allocated to each settlement in Policy H2 does not represent a distribution which will maximise the chances of achieving a more sustainable pattern of development. In particular, it is unclear why, as the largest town in the District (30,196 people, para 2.21), Rayleigh is allocated no greenfield dwellings prior to 2015, only 500 dwellings between 2015 and 2021 and no dwellings after 2021 (Policy H3). In contrast, Rochford / Ashingdon (population 10,775) is proposed to accommodate 1,200 dwellings during the full plan period (H2 and H3), and Hullbridge (population 6445) has the same allocation as Rayleigh of 500 dwellings, despite being one fifth of its size.

Whilst it is accepted that the size of a settlement does not automatically mean it is the most sustainable settlement for further development, the Core Strategy makes the following factual statements about Rayleigh which suggest it is the most sustainable settlement in the District

- (i) it is the largest settlement in the District (2.21)
- (ii) it has the best access to services in the District (2.68)
- (iii) Rayleigh has the highest percentage of demand (44.4%) in terms of the Housing Waiting List (2.35)
- (iv) Rayleigh provides the most comprehensive range of town centre facilities (12.13)
- (v) Rayleigh is the principal centre in the District and maintains a much greater share of its convenience and comparison shopping than any other area of the District (12.18).

Paragraph 2.39 encapsulates what is (correctly) the distribution strategy for additional housing

"As well as directing housing growth to areas of need / demand, and away from unsustainable locations subject to constraints, the Council must consider the relationship of housing growth to areas of employment growth".

It is difficult to reconcile this comment with (for example) the proposal to identify the same number of greenfield allocations (500 in H2 and H3) in both Rayleigh and Hullbridge. Hullbridge is a second tier settlement and the plan comments on the less sustainable nature of these settlements as follows

"The second tier comprises Hullbridge and Great Wakering. These settlements have a more limited range of services and access to public transport is relatively poor".

It is noted that the first of the 'Transport' objectives (p102) is

"deliver developments that will reduce reliance on the private car, and that are well related to the public transport network".

This is also reflected in Policy T1 which starts by stating

"Developments will be required to be located and designed in such a way as to reduce reliance on the private car".

It therefore appears that the objective of the Core Strategy to deliver the most sustainable pattern of development is not reflected in the proposed greenfield housing distribution in Policies H2 and H3.

The decision not to locate more greenfield development in Rayleigh does not reflect an absence of available and sustainable sites.

For example, the Aston Unit Trust and Mr J Needs have land at Wellington Road, north east of Rayleigh and south of the

Core Strategy Submission Document

O - 16482 - 8324 - Policy H2 - Extensions to residential envelopes and phasing - i, ii, iii

16482 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

B1013

which is capable of accommodating up to 200 dwellings. This land (see plan) is outside the Upper Roach Valley Policy Area and is well located to the wide range of facilities provided in the town. It could, therefore, represent a sustainable eastern extension to the largest town in the District with the highest level of housing need. It is also a location where many trips could be made without requiring the use of a private car.

The logical conclusion of this representation is that the balance of H2 and H3 sites should be adjusted to give a higher level of development in Rayleigh and less in the second and third tier settlements. Rayleigh should also be the priority area of search for additional greenfield allocations if further sites are required. This would accord with the new spatial strategy Policy H*.

The plan could be made sound by amalgamating Policies H2 and H3 into a single policy covering the whole plan period.

"Extensions to residential envelopes to 2025

The residential envelopes of existing settlements will be extended in the broad areas set out below and indicated on the Key Diagram to contribute to land supply in the period to 2025.

Area

Rayleigh North of London Road - 550 Dwellings by 2025
North East Rayleigh, south of the B1013 - 200 Dwellings by 2025
Other sites at Rayleigh - 320 Dwellings by 2025
West Rochford - 600 Dwellings by 2025
West Hockley - 50 Dwellings by 2025
South Hawkwell - 175 Dwellings by 2025
Ashingdon - 400 Dwellings by 2025
Hullbridge - 200 Dwellings by 2025
Great Wakering - 250 Dwellings by 2025
Canewdon - 40 Dwellings by 2025

Total Dwellings by 2025 - 2785

The detailed location and quantum of development will be articulated within the Allocations DPD (rest of policy unchanged)

It is considered that our participation at the oral part of the public examination would assist the Inspector for two main reasons

- Sellwood Planning has a detailed knowledge of the Rochford area, appeared at the last Local Plan Inquiry and was a participant at the RSS public examination. This direct knowledge of the local area and the statutory Development Plan may be of assistance to the Inspector

- Sellwood Planning has experience in promoting major schemes through Core Strategies (eg. 7,000 dwellings in Ashford, 5,750 dwellings in Dover, 2,500 dwellings in Horsham and 1,200 dwellings in Newmarket) and the emerging body of evidence of what constitutes a sound Core Strategy and what is unsound. Our experience indicates that, in a number of respects, the submitted Core Strategy is unsound in its present form.

Summary:

As explained in other representations submitted on behalf of the Aston Unit Trust and Mr J Needs, the Core Strategy fails to set out a long term, robust and flexible strategy for development as required under PPS12. Policy H2 compounds these concerns by being inflexible and distributing greenfield allocations in a manner which is contrary to the Council's objectives and will not deliver a pattern of sustainable development.

The main deficiencies of Policy H2 are

(a) there is no reason to split the housing provision between H2 (pre 2021) and Policy H3 (post 2021). The Core Strategy should contain a single allocations policy dealing with the full plan period of at least 15 years. By separating the sites into two periods, there is no clear mechanism to (for example) accelerate H3 sites if there is a shortfall in the H2 sites

(b) there is no contingency strategy if any of the H2 sites fail to come forward or guidance on what sites should be additionally allocated if other parts of the land supply fail

(c) the number of dwellings allocated to each settlement in Policy H2 does not represent a distribution which will maximise the chances of achieving a more sustainable pattern of development. In particular, it is unclear why, as the largest town in the District (30,196 people, para 2.21), Rayleigh is allocated no greenfield dwellings prior to 2015, only 500 dwellings between 2015 and 2021 and no dwellings after 2021 (Policy H3). In contrast, Rochford / Ashingdon (population 10,775) is proposed to accommodate 1,200 dwellings during the full plan period (H2 and H3), and Hullbridge (population 6445) has the same allocation as Rayleigh of 500 dwellings, despite being one fifth of its size.

Whilst it is accepted that the size of a settlement does not automatically mean it is the most sustainable settlement for

Core Strategy Submission Document

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

further development, the Core Strategy makes the following factual statements about Rayleigh which suggest it is the most sustainable settlement in the District

(i) it is the largest settlement in the District (2.21)

(ii) it has the best access to services in the District (2.68)

(iii) Rayleigh has the highest percentage of demand (44.4%) in terms of the Housing Waiting List (2.35)

(iv) Rayleigh provides the most comprehensive range of town centre facilities (12.13)

(v) Rayleigh is the principal centre in the District and maintains a much greater share of its convenience and comparison shopping

than any other area of the District (12.18).

Paragraph 2.39 encapsulates what is (correctly) the distribution strategy for additional housing

"As well as directing housing growth to areas of need / demand, and away from unsustainable locations subject to constraints, the Council must consider the relationship of housing growth to areas of employment growth".

It is difficult to reconcile this comment with (for example) the proposal to identify the same number of greenfield allocations (500 in H2 and H3) in both Rayleigh and Hullbridge. Hullbridge is a second tier settlement and the plan comments on the less sustainable nature of these settlements as follows

"The second tier comprises Hullbridge and Great Wakering. These settlements have a more limited range of services and access to public transport is relatively poor".

It is noted that the first of the 'Transport' objectives (p102) is

"deliver developments that will reduce reliance on the private car, and that are well related to the public transport network".

This is also reflected in Policy T1 which starts by stating

"Developments will be required to be located and designed in such a way as to reduce reliance on the private car".

It therefore appears that the objective of the Core Strategy to deliver the most sustainable pattern of development is not reflected in the proposed greenfield housing distribution in Policies H2 and H3.

The decision not to locate more greenfield development in Rayleigh does not reflect an absence of available and sustainable sites.

For example, the Aston Unit Trust and Mr J Needs have land at Wellington Road, north east of Rayleigh and south of the B1013

which is capable of accommodating up to 200 dwellings. This land (see plan) is outside the Upper Roach Valley Policy Area and is

well located to the wide range of facilities provided in the town. It could, therefore, represent a sustainable eastern extension to the

largest town in the District with the highest level of housing need. It is also a location where many trips could be made without requiring the use of a private car.

The logical conclusion of this representation is that the balance of H2 and H3 sites should be adjusted to give a higher level of development in Rayleigh and less in the second and third tier settlements. Rayleigh should also be the priority area of search for additional greenfield allocations if further sites are required. This would accord with the new spatial strategy Policy H*.

Change to Plan The plan could be made sound by amalgamating Policies H2 and H3 into a single policy covering the whole plan period.

Agent: N/A

Full Text: REF: Rochford Core Strategy - 175 Houses in Hawkwell

I feel I must write to you objecting to the above number of houses in Hawkwell West as being unsound. This location is not sustainable in that it will cause an increase in car usage to a point of heavy congestion. At present it takes me quite a while to drive onto the B1013 whether turning right to head for Southend or left towards Hockley and Rayleigh.

The development is situated between Hockley and Rochford railway stations and necessitates the use of a car to reach either of these locations. There is limited public transport in this area and I cannot see any improvement in the near future. A similar reasoning exists for the shops which can only be accessed by car.

Unless the highways can be improved in the area mentioned we can only look forward to gridlock in this region.

I feel that the requirements of PPS12 are not being met in the manner they are intended. From an environmental point of view this development creates a loss of character and I cannot see any social, economic or environmental benefits for the existing settlements.

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Respondent: Ms S Funk [14225]

8 Hazelwood
Hawkwell
Essex
SS5 4HP

Agent: N/A

Full Text: Objection to Rochford Core Strategy, 175 houses in Hawkwell is UNSOUND

The proposal in the Rochford Core Strategy for this many houses in the Ward of Hawkwell West is UNSOUND because the vital requirements of PPS12 are not met in terms of sustainability and therefore the location of Hawkwell West should be removed.

The reasons why development in this location is unsustainable are as follows:

Travel

Limited public transport - to take just two examples - there is a bus to Southend at 8.03am and the next one isn't until 9.24am - when I used it recently it didn't turn up (apparently a frequent occurrence). The No. 8 bus does not meet the public needs due to infrequent service, unreliability and does not offer an evening service. Not all buses go into Rayleigh - people will have to change their bus at Hockley and catch a train or another bus. This will mean people have no choice but to use their cars leading to...

Increased car use causing heavy congestion as all transport from this development will enter the B130 at Thorpe Road or from Rectory Road. Already the B130 is recognised as the busiest B road in the UK. An increase in traffic will result in a safety issue with emergency vehicles unable to gain access as roads are narrow in places, particularly Rectory Road.

Inability to improve the highways adequately within Hawkwell West now or in the future does not make this development sustainable.

Distance from shops. From Rectory Road to reach the small parade of shops on Main Road is a 20 minute walk with an incline, 30 minutes to Hockley which one has to walk up White Hart Hill, 30 minutes plus to Golden Cross parade of shops. Impossibility for many elderly people or parents with very young children.

Distance from Rail Stations - Hockley is a 30 minute walk from Rectory Road uphill and 50 minutes to Rochford, impractical for many people.

Environment

The site of the planning application is unsuitable for a large development.

Complete loss of character. To place 330 or even 175 properties in the area will be detrimental to the character of Hawkwell West. At the moment Hawkwell West viewed by air or even by google earth shows quite clearly this area to be a hamlet of existing properties, green belt areas with trees and shrubs, surrounded by agriculture fields. To squeeze this development into this space which is green belt with numerous trees and shrubs will make Hawkwell West into suburbia, it will lose its village, semi rural outlook which is important to local residents.

Part of the site, 9 acres already has a tree preservation order granted when local residents asked RDC woodlands officer to intervene when the owner in recent times started to remove trees. Does this not merit the importance of the character of the area that RDC woodland officer thought part of the site was worth of a tree preservation order and thus retaining the character of the area? Why is this now being dismissed?

Loss of green belt land. We cannot afford to lose green belt and anywhere in Hawkwell West.

Loss of wildlife. In Spencer's Park you can see all bird species that live and nest in the proposed site, I regularly see wood pigeons, woodpeckers, jays, together with many of our loved songbirds. Badgers and bats are known to live on the site, is it of no consolation to the wildlife that the proposed site developer has taken this into account and left a small park area protecting the wildlife, an area surrounded by properties and human activity. How can wildlife be protected during the noisy building process, simply the cannot.

In addition the Core Strategy is UNSOUND because it does not fulfil the principals that are stated in the document as it relates to the proposal for Hawkwell West. The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. No such benefits would apply to this location and development would be materially detrimental to the character of the existing settlements in Hawkwell West. It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely effected', this limit has already been exceeded in Hawkwell West.

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

The core strategy says 'locate development in areas where alternatives to car use are more viable' and 'reduce the requirement to travel' and accompanying any development with requisite highway infrastructure to 'mitigate their impact on existing network'. It is not possible to do this in Hawkwell West as there is not room for development of highways, especially in Rectory Road and any developing in this area would increase the requirement to travel, especially by car.

Moving onto Public Transport it states that. There is just one bus to and from Southend/Rayleigh running hourly but does not offer an evening service, with no prospect of Arriva providing an appropriate service in the long term.

Finally, such a large scale development would lead to an unwelcome strip coalescence of built settlements which is not in line with Council policy.

Therefore for all the reasons given in this letter, I most strongly object to the two proposals outlined at the start of this letter.

Summary:

The reasons why development in this location is unsustainable are as follows:

Travel

Limited public transport - to take just two examples - there is a bus to Southend at 8.03am and the next one isn't until 9.24am - when I used it recently it didn't turn up (apparently a frequent occurrence). The No. 8 bus does not meet the public's needs due to infrequent service, unreliability and does not offer an evening service. Not all buses go into Rayleigh - people will have to change their bus at Hockley and catch a train or another bus. This will mean people have no choice but to use their cars leading to...

Increased car use causing heavy congestion as all transport from this development will enter the B130 at Thorpe Road or from Rectory Road. Already the B130 is recognised as the busiest B road in the UK. An increase in traffic will result in a safety issue with emergency vehicles unable to gain access as roads are narrow in places, particularly Rectory Road.

Inability to improve the highways adequately within Hawkwell West now or in the future does not make this development sustainable.

Distance from shops. From Rectory Road to reach the small parade of shops on Main Road is a 20 minute walk with an incline, 30 minutes to Hockley which one has to walk up White Hart Hill, 30 minutes plus to Golden Cross parade of shops. Impossibility for many elderly people or parents with very young children.

Distance from Rail Stations - Hockley is a 30 minute walk from Rectory Road uphill and 50 minutes to Rochford, impractical for many people.

Environment

The site of the planning application is unsuitable for a large development.

Complete loss of character. To place 330 or even 175 properties in the area will be detrimental to the character of Hawkwell West. At the moment Hawkwell West viewed by air or even by google earth shows quite clearly this area to be a hamlet of existing properties, green belt areas with trees and shrubs, surrounded by agriculture fields. To squeeze this development into this space which is green belt with numerous trees and shrubs will make Hawkwell West into suburbia, it will lose its village, semi rural outlook which is important to local residents.

Part of the site, 9 acres already has a tree preservation order granted when local residents asked RDC woodlands officer to intervene when the owner in recent times started to remove trees. Does this not merit the importance of the character of the area that RDC woodland officer thought part of the site was worth of a tree preservation order and thus retaining the character of the area? Why is this now being dismissed?

Loss of green belt land. We cannot afford to lose green belt and anywhere in Hawkwell West.

Loss of wildlife. In Spencer's Park you can see all bird species that live and nest in the proposed site, I regularly see wood pigeons, woodpeckers, jays, together with many of our loved songbirds. Badgers and bats are known to live on the site, is it of no consolation to the wildlife that the proposed site developer has taken this into account and left a small park area protecting the wildlife, an area surrounded by properties and human activity. How can wildlife be protected during the noisy building process, simply the cannot.

In addition the Core Strategy is UNSOUND because it does not fulfil the principals that are stated in the document as it relates to the proposal for Hawkwell West. The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. No such benefits would apply to this location and development would be materially detrimental to the character of the existing settlements in Hawkwell West. It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely effected', this limit has already been exceeded in Hawkwell West.

Full Text: Objection to Rochford Core Strategy, 175 Houses in Hawkwell

Dear Mr Scrutton,

The proposal in the Rochford Core Strategy for this many houses in the Ward of Hawkwell is unsound since the requirements of PPS12 are not met in terms of sustainability. Therefore the location of Hawkwell West should be removed by the Inspector, and the allocation moved to a sustainable location.

The reasons that development in this location is unsustainable under PPS12 are as follows:

Travel

- â€¢ Limited public transport
- â€¢ Increased car use causing heavy congestion
- â€¢ Inability to improve highways
- â€¢ Distance from shops
- â€¢ Distance from rail stations

Environment

- â€¢ Semi-rural location is unsuitable for large development
- â€¢ Complete loss of character
- â€¢ Loss of Green Belt
- â€¢ Loss of wildlife
- â€¢ No social, economic or environmental benefits

In addition, the Core Strategy is unsound as it does not fulfil the principles that are expressly stated in the Core Strategy as it relates to the proposal for Hawkwell:

The Core Strategy states that it 'seeks to take advantage of development Opportunities that will provide social, economic and environmental Benefits'

No such benefits can apply to this location, in fact development would be detrimental to the character of the existing settlement in Hawkwell West (in contradiction of the stated aims of the Core Strategy), The Core Strategy also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected'. 175 new houses in West Hawkwell will far exceed this limit.

The Core Strategy says 'locate development in areas where alternatives to car use are more viable'; 'reduce the requirement to travel', and accompany any development with requisite highway infrastructure to 'mitigate their impact on the existing network'. It is not possible to do this in Hawkwell West as there is no space for the development of local roads, particularly in Rectory Road, and any development here would increase the requirement to travel, especially by car.

In respect of Public Transport, the Core Strategy states that 'planning should be well related to existing public transport'. There is just one bus to and from Southend/Rayleigh per hour, with no prospect of Arriva providing and appropriate service in the long term.

Finally, such a large scale development would lead to an unwelcome strip coalescence of built settlements which is not in line with Council policy.

We sincerely hope that Rochford District Council considers these matters very carefully, and concludes, with many residents of Hawkwell, that this housing development is unsustainable.

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Respondent: Mrs Patricia James [7865]

8 Hazelwood
Hawkwell
Essex
SS5 4HP

Agent: N/A

Full Text: Objection to Rochford Core Strategy, 175 houses in Hawkwell is UNSOUND

As a resident in Hawkwell West together with my family who for the past four generations have also resided in the area enables me to have an in-depth knowledge of the local area and its inhabitants.

Hawkwell West during my lifetime has seen only small scale property development, the largest possibly my own road Hazelwood with 26 houses. Clements Hall Sports Centre was built which together with properties known as Royers and Spencer's, the 'offering' or bargaining between land owners and RDC of 'let me build here and you can have some land for public open space' which gave the area Spencers Park together with the adjacent development. Apart from this Hawkwell West has only seen small developments or small scale infilling a few properties at a time mostly when a property with large garden is demolished and two or three properties built in the place of one. Although I may not always approve of backyard development or intensified infilling we have not seen an application for a proposed development such as envisaged by David Wilson Homes for Hawkwell West of 330 properties or even that has been proposed in the Rochford Core Strategy of 127 properties.

One the building of Clements Hall Sports Centre, the access road was originally planned for Sweyne Avenue, local residents objected and the plan was put forward that a new access road should be built, now called Clements Hall Way. A public inquiry was held at Rayleigh, it was decided by the Inspector that 'she would only allow the access road on the condition that it would form a barrier to prevent any further encroachment of green belt land between the existing remaining properties (one was removed to make space for the road) to the East along Rectory Road and to the West along Rectory Road to Main Road Hawkwell'.

The Inspector saw the importance of retaining the green belt land (now the proposed site for development) and the character of the area when she granted permission for the road but with safeguards in place to protect the green belt. The same should still apply today. Why is the Inspectors decision now being dismissed and ignored by RDC? This is the same area that David Wilson Homes envisages 300 properties and has applied to RDC for outline planning permission and I suspect will be the suggested site for Hawkwell West RDC within the Core Strategy for 127 properties.

The proposal in the Rochford Core Strategy for this many houses in the Ward of Hawkwell West is UNSOUND because the vital requirements of PPS12 are not met in terms of sustainability and therefore the location of Hawkwell West should be removed.

The reasons why development in this location is unsustainable are as follows:

Travel

Limited public transport, one bus an hour that does not meet the publics needs due to infrequent service, unreliability and does not offer an evening service.

Increased car use causing heavy congestion as all transport from this development will enter the B130 at Thorpe Road or from Rectory Road. Already the B130 is recognised as the busiest B road in the UK. All access roads leading onto the B130 can be seen now with cars stacking to enter at every road junction and mini roundabouts en route at most times of the day and particularly at rush hours. One accident between Rochford, Hawkwell and Hockley causes gridlock, an increase in traffic will result in a safety issue with emergency vehicles unable to gain access as roads are narrow in places, particularly Rectory Road. The planning application suggests two access points onto Rectory Road and Thorpe Road onto Main Road - all converge onto the B130 a B road at the capacity already of an A road making this an unrealistic proposal with no possibility of improvement other than what has been suggested at the mini-roundabout junction of Rectory Road, Hall Road, Main Road B130. This is an inadequate improvement to solve an excess traffic problem.

Inability to improve the highways adequately within Hawkwell West now or in the future does not make this development sustainable.

Distance from shops. From Rectory Road to reach the small parade of shops on Main Road is a 20 minute walk with an incline, 30 minutes to Hockley which one has to walk up White Hart Hill, 30 minutes plus to Golden Cross parade of shops. Impossibility for many elderly people or parents with very young children with shopping too.

Distance from Rail Stations - Walking Hockley 30 minutes from Rectory Road uphill and 50 minutes to Rochford, impractical for many people without their own transport and an unreliable bus service. Cycling may not be a choice for all or even convenient for the majority.

Core Strategy Submission Document

16571 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Environment

The site of the planning application is unsuitable for a large development as it sits in the middle of a semi rural location near agriculture land, green belt areas with limited existing properties, mostly bungalows and detached properties. The application suggests 'landmark buildings' three stories high amongst detached and semi detached properties, completely out of keeping with the area..

Complete loss of character. To place 330 or even 175 properties in the area will be detrimental to the character of Hawkwell West. At the moment Hawkwell West viewed by air or even by google earth shows quite clearly this area to be a hamlet of existing properties, green belt areas with trees and shrubs, surrounded by agriculture fields. To squeeze this development into this space which is green belt with numerous trees and shrubs will make Hawkwell West into suburbia, it will lose its village, semi rural outlook which is important to local residents.

Part of the site, 9 acres already has a tree preservation order granted when local residents asked RDC woodlands officer to intervene when the owner in recent times started to remove trees. Does this not merit the importance of the character of the area that RDC woodland officer thought part of the site was worth of a tree preservation order and thus retaining the character of the area? Why is this now being dismissed?

Loss of green belt land. We cannot afford to lose green belt and anywhere in Hawkwell West.

In addition there will be far too much green belt land lost if developments go ahead in neighbouring villages which will impact on our area too. I would like to preserve the little we have in Hawkwell West for future generations to enjoy, not for them to wish that we had not been more sensitive to the local environment by allowing such developments to go ahead.

Loss of wildlife. From my address you will be aware that I live on the north side of Spencer's Park, a park that at the moment is enjoyed by all bird species that live and nest in the proposed site, I regularly see wood pigeons, woodpeckers, jays, together with many of our loved songbirds. Badgers and bats are known to live on the site, is it of no consolation to the wildlife that the proposed site developer has taken this into account and left a small park area protecting the wildlife, an area surrounded by properties and human activity. How can wildlife be protected during the noisy building process, simply the cannot.

There are NO social, economical or environmental benefits to be gained with this development of 330 houses and in addition the Core Strategy is UNSOUND because it does not fulfil the principals that are stated in the document as it relates to the proposal for Hawkwell West. The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. No such benefits would apply to this location and development would be materially detrimental to the character of the existing settlements in Hawkwell West.

It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely effected', this limit has already been exceeded in Hawkwell West.

The core strategy says 'locate development in areas where alternatives to car use are more viable' and 'reduce the requirement to travel' and accompanying any development with requisite highway infrastructure to 'mitigate their impact on existing network'. It is not possible to do this in Hawkwell West as there is not room for development of highways, especially in Rectory Road and any developing in this area would increase the requirement to travel, especially by car.

Moving onto Public Transport it states that 'planning should be well related to existing public transport where possible'.. There is just one bus to and from Southend/Rayleigh running hourly but does not offer an evening service, with no prospect of Arriva providing an appropriate service in the long term.

Finally, such a large scale development would lead to an unwelcome strip coalescence of built settlements which is not in line with Council policy.

Therefore for all the reasons given in this letter, I most strongly object to the two proposals outlined at the start of this letter.

Full Text: Objection to Rochford Core Strategy - 175 Houses in Hawkwell is UNSOUND.

We are writing formally to express our strong objection to the Rochford Core Strategy concerning 175 houses in Hawkwell as UNSOUND.

In brief our objections are based on the following:

The proposed site is on greenbelt/woodland and will impact on wildlife in the area as well as climate change. A large and highly concentrated housing development is totally out of character with the "open" and semi-rural nature of the area.

The proposals to build a significant number of houses close together including flats and three storey properties would not be in keeping with properties in Hawkwell which are primarily detached or semi detached bungalows or houses. The local transport or highways will not be able to support the significant increase in demand_ particularly commuting and local car journeys arising from 330 houses in such a concentrated area. The B1013 is already one of the busiest roads in this part of Essex.

Local bus services are very infrequent and almost non-existent in the late evenings.

Apart from the increase in demand for local doctor and dentist services, local schools are unlikely to be able to accommodate the significant increase in demand for school places.

Overall, we firmly believe that these proposals will adversely affect the social, economic and environmental nature of the area, and we therefore strongly object to Council Members approving this part of the Rochford Core Strategy application.

1. We are instructed by our client, Fairview New Homes, to submit comments on the published Core Strategy Submission Document. For ease specific reference has been made in accordance with the paragraph and policy numbers as contained in the published document. We would like the opportunity to represent our Client at the forthcoming Examination of the Core Strategy DPD and would be grateful for confirmation that this is possible.

2. Fairview New Homes have an interest in a parcel of land to the South West of Rayleigh Town Centre, as indicated on the attached site location plan. This land was previously identified in the Core Strategy Preferred Options documents to provide an urban extension to the south west of Rayleigh. This option has now been withdrawn in the Core Strategy Submission document and it is on this basis these representations are provided to the Council.

3. The Submission Core Strategy has been considered against the requirements set out at Paragraph 4.36 of PPS12 requiring core strategies to be justifiable and effective in order to be found sound, as follows:

Justified:

- i. Founded on a robust and credible evidence base
- ii. The most appropriate strategy when considered against the reasonable alternatives

Effective:

- i. Deliverable - the Core Strategy should show how the vision, objectives and strategy for the area will be delivered and by whom, and when, including who is responsible for implementing different elements of the strategy and when
- ii. Flexible - a strategy is unlikely to be effective if it cannot deal with changing circumstances. Plans should show how they will handle contingencies.
- iii. Able to be monitored - monitoring is essential for an effective strategy and will provide the basis on which the contingency plans within the strategy would be triggered.

4. To summarise our comments, Fairview New Homes strongly object to the Core Strategy as is currently presented on the basis the document is currently unsound for a number of reasons:

â€¢ The lack of robust and credible evidence base

â€¢ Failure to clearly discount reasonable alternatives

â€¢ The effectiveness of the plan is also considered to be flawed and the Council's approach to deliverability and flexibility is questioned.

5. Fundamentally, we question the soundness of the Core Strategy due to the lack of available evidence to support the choices made by the Council. In particular, there is a strong reliance on the findings of the 2009 Strategic Housing Land Availability Assessment (SHLAA) although it is understood this document is not due to be published for consideration alongside the Core Strategy. We, therefore, reserve the right to submit additional comments to the Core Strategy consultation following the publication of the SHLAA.

6. The 2009 SHLAA is clearly listed at Paragraph 1.29 of the submission Core Strategy as one of the evidence base documents the Council have drawn upon when drafting the Core Strategy. The documents listed are all considered to have played an important role in informing the Core Strategy. PPS12 also recognises at Paragraph 4.37 the importance of demonstrating how choices made in the plan are backed up by factual evidence identified in evidence base documents.

7. As a starting point it is important to state it is Fairview New Homes greatest concern there is no background provided within the Core Strategy document, or indeed any of the available evidence base documents, identifying why the Local Planning Authority has chosen to remove some of the sites previously proposed for housing development. In addition, there is also no justification as to why the retained urban extension sites are more suitable than those removed from the draft plan.

8. The following provides specific comments in response to the relevant areas of the Core Strategy.

Housing

9. It is stated at Paragraphs 4.10-4.12 that the Council have adopted a balanced approach when locating new housing between higher tier settlements and lower tier settlements. Although there is no detail provided as to how the Council

Core Strategy Submission Document

16611 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

intend on implementing this balanced approach or how the strategic allocation of housing contributes to the balance required. Our Client cannot support this approach until further detail is understood as to the proportion of housing being allocated to each settlement tier.

10. The proposed distribution of housing development during the plan period does not appear to be proportionately allocated between the various settlement tiers. We would argue that development should be distributed proportionately in line with the size of the settlement in order to benefit for available services and facilities. Rayleigh recognised as having best access to services within the district at Paragraph 2.68 of the Core Strategy. On this basis it is considered the development should primarily be directed to Rayleigh with a proportionate level of housing to the remaining settlements in the District.

Policy H1 - The efficient use of land for housing

11. In general the use of residential extensions to meet the remaining housing requirement that cannot be delivered through the redevelopment of appropriate previously developed land is supported by Fairview New Homes.

12. It is understood there is a need to prioritise use of brownfield land in line with national policy requirements but this needs to be a carefully balanced and realistic approach in identifying appropriate urban extensions to accommodate the majority of the District's housing, as identified in the table at Paragraph 4.6 and later at Paragraph 4.15.

13. Policy H1 sets out that the Council will seek the redevelopment of Rawreth Lane Industrial Estate, Foundry Industrial Estate, Stambridge Mills and Star Lane Industrial Estate. Without sight of the 2009 SHLAA it is not possible to understand whether the Council's choice to release employment land for housing is appropriate and Fairview New Homes cannot, therefore, support this element of Policy H1. This objection is further amplified by the fact additional employment land is required but is yet to be identified.

Policy H2 - Extensions to residential envelopes and phasing

14. The Council's intention to provide a balanced strategy for housing provision is mentioned again at Paragraph 4.18. The comments made at Paragraphs 9 and 10 above are also relevant in this respect.

15. In comparing the Preferred Options Core Strategy Document and Submission Core Strategy Document there is a significant reduction in the number of housing units being provided in urban extensions pre 2015, from 1450 dwellings to 775. From discussions with the Local Planning Authority it is understood the Council are seeking to provide the District's housing requirements by increased development densities. From the evidence available in the Submission Core Strategy and summary of SHLAA sites a number of the sites identified as urban extensions have in fact been allocated a reduced number of dwellings, including the land to the north of London Road, Rayleigh. We would, therefore, consider the approach taken by the Local Planning Authority to provide the required level of housing is untenable and unjustified.

16. In discounting preferred options PPS12 makes clear at Paragraph 4.38 the requirement for Local Planning Authorities to consider and evaluate reasonable alternatives. As set out above, the choices the Council have pursued have not been substantiated and without the consideration of reasonable alternatives the Core Strategy cannot be considered justified and therefore unsound.

17. However, this is our opinion based only on discussions with the Local Planning Authority rather than a thorough evidence base and we will consider the evidence in detail when it become available and provide further comment.

18. Paragraph 4.19 of the draft Core Strategy details the Council's primary factors in determining the location of future urban extensions. It is presumed the Council have assessed each of the proposed urban extension sites against the following criteria and that this information is contained within the SHLAA, although we have not been provided with any evidence of this to assess. It can be demonstrated that the land identified on the attached site location plan meets all of the requirements set out below.

â€¢ The proximity and relationship to existing centres, facilities, services

â€¢ The availability of infrastructure and/or the potential for additional infrastructure to be provided for development in such areas

â€¢ The potential to reduce private car dependency

â€¢ The potential to avoid areas of constraint (such as areas at risk of flooding, sites of ecological importance, public safety zone etc)

â€¢ The historical, agricultural and ecological value of land

â€¢ The impact on highway network (including availability and impact on existing network, as well as potential for improvements to be delivered)

â€¢ The relationship of development locations to the District's area of employment growth

â€¢ The potential to create a defensible Green Belt boundary

â€¢ The avoidance of coalescence with neighbouring settlements

19. In summary, Fairview's land is sustainably located in particularly close proximity to Rayleigh Town Centre and train station. In addition, the location of the land provides a natural extension and rounding of settlement boundary. An extension to Rayleigh in this location offers no opportunity for coalescence with neighbouring settlements nor does it constitute urban sprawl.

Core Strategy Submission Document

16611 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Policy H2 - Extensions to residential envelopes and phasing

20. Although it is stated a flexible approach to the timings of the release of land will be maintain no explanation is provided as to why some sites are considered suitable for development pre 2015 and others post 2015. Paragraph 4.22 elaborates further to state a number of factors have been considered when determining the phasing of strategic housing sites although this information is not clearly available to assess.

21. As stated above the principle of releasing certain areas of greenbelt land is considered the best approach to meeting the Council's housing provision requirements. However, Fairview New Homes object to the omission of the land to the South West of Rayleigh for housing development as previously identified in the Core Strategy Preferred Options document. The site identified on the attached site location plan has been assessed against the Council's criteria, as set out at Paragraph 18 above and each requirement can be met. Without any clear explanation as to why this site has been discounted and the only other strategic housing site identified in Rayleigh is located further away from Rayleigh Town Centre and the associated services and facilities including the train station, Fairview New Homes object to Policy H2.

22. As considered at the outset of these representations the draft Core Strategy cannot be considered robust, and therefore sound, without clear justification and evidence base.

Policy H3 - Extension to residential envelopes post-2021

23. Policy H3 is supported on the basis that the release of greenbelt land is required for housing and this is the most appropriate approach to meet the Council's housing requirements, as set out at Paragraph 21 above.

24. However, it is unclear why some of the sites previously identified for housing development pre 2015 up until 2021 in the Preferred Options Core Strategy document have now been allocated for development post 2021, such as South East Ashingdon. It is stated at Paragraph 4.24 of the Submission Core Strategy document those areas identified for post 2021 development may not be immediately deliverable. However, there is no information available to understand why these sites are now no longer considered suitable for pre 2015 development as they were in December 2008. As a result, Fairview New Homes consider Policy H3 to be unjustified and therefore unsound.

Affordable Housing

25. The acute need for additional affordable housing is recognised at Paragraph 4.30. It is unclear from the draft Core Strategy document exactly how much affordable housing is required in the District in the plan period.

26. However, taking the starting point as set out at Paragraph 4.30 that the Thames Gateway South Essex Strategic Housing Market Assessment requires 131 net additional affordable dwellings per year which constitutes 52% of the District's overall annual housing target. In order to achieve this target using the Council's proposed policy requirement that new housing developments are to provide 35% affordable housing, 375 new dwellings would need to be developed each year. This calculation does not account for those developments with fewer than 15 dwellings which have no requirement to provide affordable housing or developments which cannot viably afford to provide non-market housing.

27. An annual requirement of 250 dwellings is identified at Paragraph 4.2 of the Core Strategy which would leave a significant short fall of affordable housing and act to compound the current situation. The approach taken by the Council ultimately accepts there will always be a shortfall in affordable housing provision and does not seek to redress this. We do not, therefore, consider this to be a robust or justified approach to achieving affordable housing in the District.

28. It is, therefore, considered in order to meet the District's affordable housing requirement additional housing land should be identified in order to ensure a wholesale increase in housing provision to address the Council's shortfall in affordable housing and meet the targets set for the plan period. The most appropriate and effective method by which to secure affordable housing provision is through developing large sites that are viably able to offer affordable housing units.

29. During the consultation of the submission Core Strategy the Council's Housing Strategy (2009) was not available and we reserve the right to make further comment on this document following the publication of this evidence.

The Green Belt

30. It is fully accepted by the Council that the Green Belt boundary is currently too tightly drawn and the release of some Green Belt land is necessary to meet the District's development requirements. However, it needs to be demonstrated that the areas of Green Belt land to be lost are justified and located in the most appropriate area and that areas of release land do not undermine the principle of the Green Belt.

31. It is understood from Paragraph 6.7 of the Submission Core Strategy the Council will seek to examine the degree to which current Green Belt land is helping to achieve the purposes of the Green Belt when considering reallocating land. However, areas of Green Belt are proposed to be reallocated for urban extensions prior to this research being undertaken.

Core Strategy Submission Document

16611 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

32. Fairview New Homes fully support the justified retention of the areas of Green Belt where appropriate and the release of Green Belt land where needed. However, at present the proposed Housing policies and Green Belt policies are not coherent and the reallocation of certain areas of Green Belt is not based on a credible evidence base.

Environmental Issues

Policy ENV4 - Sustainable Drainage Systems (SUDS)

33. Fairview New Homes would like to support the flexibility contained within Policy ENV4 which recognises it is not always viably possible to incorporate SUDS in all developments.

Policy ENV8 - On Site Renewable and Low Carbon Energy Generation

34. We would also like to support Policy ENV8 on the same basis as Policy ENV4 in that it is important that the production of energy from renewable or low carbon sources is only required where it is viably possible so as not to resulting in developments not coming forward.

Transport

Policy T8 - Parking Standards

35. Fairview New Homes object to Policy T8 as it is currently contrary to National Policy requirements as set out in PPG13 which contains maximum parking standards. Indeed, this is recognised at Paragraph 10.27 of the Submission Core Strategy document. Enforcing minimum parking standards is not consistent with local or national sustainability aims and should not be an approach pursued by the Council.

Summary:

Policy H2 - Extensions to residential envelopes and phasing

14. The Council's intention to provide a balanced strategy for housing provision is mentioned again at Paragraph 4.18. The comments made at Paragraphs 9 and 10 above are also relevant in this respect.

15. In comparing the Preferred Options Core Strategy Document and Submission Core Strategy Document there is a significant reduction in the number of housing units being provided in urban extensions pre 2015, from 1450 dwellings to 775. From discussions with the Local Planning Authority it is understood the Council are seeking to provide the District's housing requirements by increased development densities. From the evidence available in the Submission Core Strategy and summary of SHLAA sites a number of the sites identified as urban extensions have in fact been allocated a reduced number of dwellings, including the land to the north of London Road, Rayleigh. We would, therefore, consider the approach taken by the Local Planning Authority to provide the required level of housing is untenable and unjustified.

16. In discounting preferred options PPS12 makes clear at Paragraph 4.38 the requirement for Local Planning Authorities to consider and evaluate reasonable alternatives. As set out above, the choices the Council have pursued have not been substantiated and without the consideration of reasonable alternatives the Core Strategy cannot be considered justified and therefore unsound.

17. However, this is our opinion based only on discussions with the Local Planning Authority rather than a thorough evidence base and we will consider the evidence in detail when it become available and provide further comment.

18. Paragraph 4.19 of the draft Core Strategy details the Council's primary factors in determining the location of future urban extensions. It is presumed the Council have assessed each of the proposed urban extension sites against the following criteria and that this information is contained within the SHLAA, although we have not been provided with any evidence of this to assess. It can be demonstrated that the land identified on the attached site location plan meets all of the requirements set out below.

â€¢ The proximity and relationship to existing centres, facilities, services

â€¢ The availability of infrastructure and/or the potential for additional infrastructure to be provided for development in such areas

â€¢ The potential to reduce private car dependency

â€¢ The potential to avoid areas of constraint (such as areas at risk of flooding, sites of ecological importance, public safety zone etc)

â€¢ The historical, agricultural and ecological value of land

â€¢ The impact on highway network (including availability and impact on existing network, as well as potential for improvements to be delivered)

â€¢ The relationship of development locations to the District's area of employment growth

â€¢ The potential to create a defensible Green Belt boundary

â€¢ The avoidance of coalescence with neighbouring settlements

19. In summary, Fairview's land is sustainably located in particularly close proximity to Rayleigh Town Centre and train station. In addition, the location of the land provides a natural extension and rounding of settlement boundary. An extension to Rayleigh in this location offers no opportunity for coalescence with neighbouring settlements nor does it constitute urban sprawl.

Full Text: Representations on behalf of Fairview New Homes

1. We are instructed by our client, Fairview New Homes, to submit comments on the published Core Strategy Submission Document. For ease specific reference has been made in accordance with the paragraph and policy numbers as contained in the published document. We would like the opportunity to represent our Client at the forthcoming Examination of the Core Strategy DPD and would be grateful for confirmation that this is possible.

2. Fairview New Homes have an interest in a parcel of land to the South West of Rayleigh Town Centre, as indicated on the attached site location plan. This land was previously identified in the Core Strategy Preferred Options documents to provide an urban extension to the south west of Rayleigh. This option has now been withdrawn in the Core Strategy Submission document and it is on this basis these representations are provided to the Council.

3. The Submission Core Strategy has been considered against the requirements set out at Paragraph 4.36 of PPS12 requiring core strategies to be justifiable and effective in order to be found sound, as follows:

Justified:

- i. Founded on a robust and credible evidence base
- ii. The most appropriate strategy when considered against the reasonable alternatives

Effective:

- i. Deliverable - the Core Strategy should show how the vision, objectives and strategy for the area will be delivered and by whom, and when, including who is responsible for implementing different elements of the strategy and when
- ii. Flexible - a strategy is unlikely to be effective if it cannot deal with changing circumstances. Plans should show how they will handle contingencies.
- iii. Able to be monitored - monitoring is essential for an effective strategy and will provide the basis on which the contingency plans within the strategy would be triggered.

4. To summarise our comments, Fairview New Homes strongly object to the Core Strategy as is currently presented on the basis the document is currently unsound for a number of reasons:

â€¢ The lack of robust and credible evidence base

â€¢ Failure to clearly discount reasonable alternatives

â€¢ The effectiveness of the plan is also considered to be flawed and the Council's approach to deliverability and flexibility is questioned.

5. Fundamentally, we question the soundness of the Core Strategy due to the lack of available evidence to support the choices made by the Council. In particular, there is a strong reliance on the findings of the 2009 Strategic Housing Land Availability Assessment (SHLAA) although it is understood this document is not due to be published for consideration alongside the Core Strategy. We, therefore, reserve the right to submit additional comments to the Core Strategy consultation following the publication of the SHLAA.

6. The 2009 SHLAA is clearly listed at Paragraph 1.29 of the submission Core Strategy as one of the evidence base documents the Council have drawn upon when drafting the Core Strategy. The documents listed are all considered to have played an important role in informing the Core Strategy. PPS12 also recognises at Paragraph 4.37 the importance of demonstrating how choices made in the plan are backed up by factual evidence identified in evidence base documents.

7. As a starting point it is important to state it is Fairview New Homes greatest concern there is no background provided within the Core Strategy document, or indeed any of the available evidence base documents, identifying why the Local Planning Authority has chosen to remove some of the sites previously proposed for housing development. In addition, there is also no justification as to why the retained urban extension sites are more suitable than those removed from the draft plan.

8. The following provides specific comments in response to the relevant areas of the Core Strategy.

Housing

9. It is stated at Paragraphs 4.10-4.12 that the Council have adopted a balanced approach when locating new housing between higher tier settlements and lower tier settlements. Although there is no detail provided as to how the Council

Core Strategy Submission Document

16612 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

intend on implementing this balanced approach or how the strategic allocation of housing contributes to the balance required. Our Client cannot support this approach until further detail is understood as to the proportion of housing being allocated to each settlement tier.

10. The proposed distribution of housing development during the plan period does not appear to be proportionately allocated between the various settlement tiers. We would argue that development should be distributed proportionately in line with the size of the settlement in order to benefit for available services and facilities. Rayleigh recognised as having best access to services within the district at Paragraph 2.68 of the Core Strategy. On this basis it is considered the development should primarily be directed to Rayleigh with a proportionate level of housing to the remaining settlements in the District.

Policy H1 - The efficient use of land for housing

11. In general the use of residential extensions to meet the remaining housing requirement that cannot be delivered through the redevelopment of appropriate previously developed land is supported by Fairview New Homes.

12. It is understood there is a need to prioritise use of brownfield land in line with national policy requirements but this needs to be a carefully balanced and realistic approach in identifying appropriate urban extensions to accommodate the majority of the District's housing, as identified in the table at Paragraph 4.6 and later at Paragraph 4.15.

13. Policy H1 sets out that the Council will seek the redevelopment of Rawreth Lane Industrial Estate, Foundry Industrial Estate, Stambridge Mills and Star Lane Industrial Estate. Without sight of the 2009 SHLAA it is not possible to understand whether the Council's choice to release employment land for housing is appropriate and Fairview New Homes cannot, therefore, support this element of Policy H1. This objection is further amplified by the fact additional employment land is required but is yet to be identified.

Policy H2 - Extensions to residential envelopes and phasing

14. The Council's intention to provide a balanced strategy for housing provision is mentioned again at Paragraph 4.18. The comments made at Paragraphs 9 and 10 above are also relevant in this respect.

15. In comparing the Preferred Options Core Strategy Document and Submission Core Strategy Document there is a significant reduction in the number of housing units being provided in urban extensions pre 2015, from 1450 dwellings to 775. From discussions with the Local Planning Authority it is understood the Council are seeking to provide the District's housing requirements by increased development densities. From the evidence available in the Submission Core Strategy and summary of SHLAA sites a number of the sites identified as urban extensions have in fact been allocated a reduced number of dwellings, including the land to the north of London Road, Rayleigh. We would, therefore, consider the approach taken by the Local Planning Authority to provide the required level of housing is untenable and unjustified.

16. In discounting preferred options PPS12 makes clear at Paragraph 4.38 the requirement for Local Planning Authorities to consider and evaluate reasonable alternatives. As set out above, the choices the Council have pursued have not been substantiated and without the consideration of reasonable alternatives the Core Strategy cannot be considered justified and therefore unsound.

17. However, this is our opinion based only on discussions with the Local Planning Authority rather than a thorough evidence base and we will consider the evidence in detail when it become available and provide further comment.

18. Paragraph 4.19 of the draft Core Strategy details the Council's primary factors in determining the location of future urban extensions. It is presumed the Council have assessed each of the proposed urban extension sites against the following criteria and that this information is contained within the SHLAA, although we have not been provided with any evidence of this to assess. It can be demonstrated that the land identified on the attached site location plan meets all of the requirements set out below.

â€¢ The proximity and relationship to existing centres, facilities, services

â€¢ The availability of infrastructure and/or the potential for additional infrastructure to be provided for development in such areas

â€¢ The potential to reduce private car dependency

â€¢ The potential to avoid areas of constraint (such as areas at risk of flooding, sites of ecological importance, public safety zone etc)

â€¢ The historical, agricultural and ecological value of land

â€¢ The impact on highway network (including availability and impact on existing network, as well as potential for improvements to be delivered)

â€¢ The relationship of development locations to the District's area of employment growth

â€¢ The potential to create a defensible Green Belt boundary

â€¢ The avoidance of coalescence with neighbouring settlements

19. In summary, Fairview's land is sustainably located in particularly close proximity to Rayleigh Town Centre and train station. In addition, the location of the land provides a natural extension and rounding of settlement boundary. An extension to Rayleigh in this location offers no opportunity for coalescence with neighbouring settlements nor does it constitute urban sprawl.

Core Strategy Submission Document

16612 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Policy H2 - Extensions to residential envelopes and phasing

20. Although it is stated a flexible approach to the timings of the release of land will be maintain no explanation is provided as to why some sites are considered suitable for development pre 2015 and others post 2015. Paragraph 4.22 elaborates further to state a number of factors have been considered when determining the phasing of strategic housing sites although this information is not clearly available to assess.

21. As stated above the principle of releasing certain areas of greenbelt land is considered the best approach to meeting the Council's housing provision requirements. However, Fairview New Homes object to the omission of the land to the South West of Rayleigh for housing development as previously identified in the Core Strategy Preferred Options document. The site identified on the attached site location plan has been assessed against the Council's criteria, as set out at Paragraph 18 above and each requirement can be met. Without any clear explanation as to why this site has been discounted and the only other strategic housing site identified in Rayleigh is located further away from Rayleigh Town Centre and the associated services and facilities including the train station, Fairview New Homes object to Policy H2.

22. As considered at the outset of these representations the draft Core Strategy cannot be considered robust, and therefore sound, without clear justification and evidence base.

Policy H3 - Extension to residential envelopes post-2021

23. Policy H3 is supported on the basis that the release of greenbelt land is required for housing and this is the most appropriate approach to meet the Council's housing requirements, as set out at Paragraph 21 above.

24. However, it is unclear why some of the sites previously identified for housing development pre 2015 up until 2021 in the Preferred Options Core Strategy document have now been allocated for development post 2021, such as South East Ashingdon. It is stated at Paragraph 4.24 of the Submission Core Strategy document those areas identified for post 2021 development may not be immediately deliverable. However, there is no information available to understand why these sites are now no longer considered suitable for pre 2015 development as they were in December 2008. As a result, Fairview New Homes consider Policy H3 to be unjustified and therefore unsound.

Affordable Housing

25. The acute need for additional affordable housing is recognised at Paragraph 4.30. It is unclear from the draft Core Strategy document exactly how much affordable housing is required in the District in the plan period.

26. However, taking the starting point as set out at Paragraph 4.30 that the Thames Gateway South Essex Strategic Housing Market Assessment requires 131 net additional affordable dwellings per year which constitutes 52% of the District's overall annual housing target. In order to achieve this target using the Council's proposed policy requirement that new housing developments are to provide 35% affordable housing, 375 new dwellings would need to be developed each year. This calculation does not account for those developments with fewer than 15 dwellings which have no requirement to provide affordable housing or developments which cannot viably afford to provide non-market housing.

27. An annual requirement of 250 dwellings is identified at Paragraph 4.2 of the Core Strategy which would leave a significant short fall of affordable housing and act to compound the current situation. The approach taken by the Council ultimately accepts there will always be a shortfall in affordable housing provision and does not seek to redress this. We do not, therefore, consider this to be a robust or justified approach to achieving affordable housing in the District.

28. It is, therefore, considered in order to meet the District's affordable housing requirement additional housing land should be identified in order to ensure a wholesale increase in housing provision to address the Council's shortfall in affordable housing and meet the targets set for the plan period. The most appropriate and effective method by which to secure affordable housing provision is through developing large sites that are viably able to offer affordable housing units.

29. During the consultation of the submission Core Strategy the Council's Housing Strategy (2009) was not available and we reserve the right to make further comment on this document following the publication of this evidence.

The Green Belt

30. It is fully accepted by the Council that the Green Belt boundary is currently too tightly drawn and the release of some Green Belt land is necessary to meet the District's development requirements. However, it needs to be demonstrated that the areas of Green Belt land to be lost are justified and located in the most appropriate area and that areas of release land do not undermine the principle of the Green Belt.

31. It is understood from Paragraph 6.7 of the Submission Core Strategy the Council will seek to examine the degree to which current Green Belt land is helping to achieve the purposes of the Green Belt when considering reallocating land. However, areas of Green Belt are proposed to be reallocated for urban extensions prior to this research being undertaken.

Core Strategy Submission Document

16612 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

32. Fairview New Homes fully support the justified retention of the areas of Green Belt where appropriate and the release of Green Belt land where needed. However, at present the proposed Housing policies and Green Belt policies are not coherent and the reallocation of certain areas of Green Belt is not based on a credible evidence base.

Environmental Issues

Policy ENV4 - Sustainable Drainage Systems (SUDS)

33. Fairview New Homes would like to support the flexibility contained within Policy ENV4 which recognises it is not always viably possible to incorporate SUDS in all developments.

Policy ENV8 - On Site Renewable and Low Carbon Energy Generation

34. We would also like to support Policy ENV8 on the same basis as Policy ENV4 in that it is important that the production of energy from renewable or low carbon sources is only required where it is viably possible so as not to resulting in developments not coming forward.

Transport

Policy T8 - Parking Standards

35. Fairview New Homes object to Policy T8 as it is currently contrary to National Policy requirements as set out in PPG13 which contains maximum parking standards. Indeed, this is recognised at Paragraph 10.27 of the Submission Core Strategy document. Enforcing minimum parking standards is not consistent with local or national sustainability aims and should not be an approach pursued by the Council.

Summary:

Policy H2 - Extensions to residential envelopes and phasing

20. Although it is stated a flexible approach to the timings of the release of land will be maintain no explanation is provided as to why some sites are considered suitable for development pre 2015 and others post 2015. Paragraph 4.22 elaborates further to state a number of factors have been considered when determining the phasing of strategic housing sites although this information is not clearly available to assess.

21. As stated above the principle of releasing certain areas of greenbelt land is considered the best approach to meeting the Council's housing provision requirements. However, Fairview New Homes object to the omission of the land to the South West of Rayleigh for housing development as previously identified in the Core Strategy Preferred Options document. The site identified on the attached site location plan has been assessed against the Council's criteria, as set out at Paragraph 18 above and each requirement can be met. Without any clear explanation as to why this site has been discounted and the only other strategic housing site indentified in Rayleigh is located further away from Rayleigh Town Centre and the associated services and facilities including the train station, Fairview New Homes object to Policy H2.

22. As considered at the outset of these representations the draft Core Strategy cannot be considered robust, and therefore sound, without clear justification and evidence base.

We are supportive that the council have identified housing provision within Hawkwell. It is considered that this location is sustainable due to its close proximity to existing town centres. The provision of development in this location will enable highway infrastructure improvements which will ease current congestion. Existing previously developed sites existing within Hawkwell, (e.g. Magees Nurseries) offer opportunities for redevelopment of Brownfield land in line with government objections. Furthermore there is sufficient adjacent land in this location to provide comprehensive development.

The change we would like to see is that policy H2 is altered to refer to North Hawkwell or generally Hawkwell. It is considered development can be better constrained by the existing railway in the north of Hawkwell and will prevent sprawl to the south however this will be further considered in the Allocations Document. The reference to Hawkwell within the Core Strategy should be less site specific within this general strategy.

Summary:

We are supportive that the council have identified housing provision within Hawkwell. It is considered that this location is sustainable due to its close proximity to existing town centres. The provision of development in this location will enable highway infrastructure improvements which will ease current congestion. Existing previously developed sites existing within Hawkwell, (e.g. Magees Nurseries) offer opportunities for redevelopment of Brownfield land in line with government objections. Furthermore there is sufficient adjacent land in this location to provide comprehensive development.

Full Text: The proposal to use the green belt agricultural land "North of London Road" for 550 dwellings is contrary to National policy PPG2. PPG2 give 5 purposes for the Green Belt and the land in question satisfies them all. Therefore the document is unsound in national policy terms and should be changed.

There are other brownfield sites that could be used for the 550 dwellings (some of which have been identified by Rawreth Parish Council).

Core Strategy Submission Development Plan Document (DPD) Proposal for Additional Housing in Rawreth/West of Rayleigh (North of London Road)

I am objecting to the proposal to build an additional 770 dwellings between London Road and Rawreth Lane, 220 on the Rawreth Industrial Estate site behind Makro (this extra amount curiously not mentioned!) and 550 on farmland (classed as green belt/green field) land. Whilst there may be some merit in a development on the Rawreth Industrial Estate, where units are rather old and could perhaps be moved to a more modern site, the proposal for the farmland is really a step too far for the reasons below:

The Government & Politicians of all parties keep banging on about climate change, carbon footprints and the possibility of not being able to grow enough food for everyone and YET here, a proposal to concrete over farmland which could be used to grow more local produce rather than flying products over thousands of miles; thereby not exactly helping the so called carbon footprint. This farmland should be saved to help safeguard the countryside from encroachment, instead of crating a vast housing estate, which seems utterly ridiculous. Derelict and other urban land should be considered as a first priority to assist in regeneration.

My fear and concern is that once the plan gets the green light, there will be no stopping the limitless sprawl of western Rayleigh and Rawreth, since there are similar green field sites along other parts of Rawreth Lane, which could ultimately fall prey to the chipping away of the remaining green belt/green field land. If this happened there would be nothing to prevent neighbouring towns merging into one another, which would totally take away this part of Rayleigh's distinctive character and pleasant community feeling (something which the Core Strategy Plan states it wants to safeguard!). It also greatly reduces habitats for birds and other wildlife, which is very important to many of us.

The development would put a massive pressure on the roads and amenities around Rayleigh, which would have a very detrimental effect. This is not a case of nimbyism as this part of Rayleigh & Rawreth has already seen extensive development in recent years. There really needs to be a balance of green areas and housing not the total saturation and erosion of the countryside that would take place if this proposal were allowed to happen.

Summary: The proposal to use the green belt agricultural land "North of London Road" for 550 dwellings is contrary to National policy PPG2. PPG2 give 5 purposes for the Green Belt and the land in question satisfies them all. Therefore the document is unsound in national policy terms and should be changed.

Objection to Rochford Core Strategy, 175 Houses in Hawkwell is UNSOUND
The above proposal is totally and without any doubt UNSOUND for the following reasons.

Limited choice of public transport.

The ultimate increase in car use which could cause heavy congestion along with more traffic noise. As we live on the main road in Hawkwell, which would carry most of the extra traffic, I can assure you that the level of noise etc. which already exists is problematic enough already.

The area in question simply does NOT have the ability to improve the highways.

Because of the distance to shopping facilities it would necessitate the majority of new residents having to shop by car.

There are no local rail stations in the proposed area thus, once again causing nay new residents having to get to and from Hockley/Rochford rail stations by car.

On the environment issue:

This is a semi rural location which is totally unsuitable for further development. In actual fact we are of the strong opinion that the area has already well and truly reached its limit.

If the proposal did go ahead the area would take on a complete change of character. Once green belt is built on it is lost forever.

Wildlife is suffering enough and any more new homes would cause further loss.

We cannot see any benefits whatsoever arising socially, economically nor environmentally. If anything they have already decreased.

If we had had any inkling that the proposals would be put forward we would never have moved here in the first place. It was the area that we liked but it had already changed with enough new homes having been built.

WE DO NOT NEED NOR WANT ANY MORE.

Full Text: Policy H2 - Extensions to residential envelopes and planning

Summary: The Respondent finds the document to be unsound in its present form, however were the amendments set out in these representations to be incorporated then it is considered that the document will be sound. The general locations identified in the Core Strategy (CS) are supported. However, the respondent has prepared an indicative master plan illustrating an option for the broad locations in Ashingdon. This demonstrates that the site known as East Ashingdon could accommodate more than 150 dwellings and it must be recognised that to deliver enhancements to King Edmund School and remain viable, these sites will need to deliver this quantum of development. There is no justification for the phasing of the residential site and therefore policies H2 and H3 should be combined. In addition, the means by which the sites are identified are too vague and the general locations are not consistent with the key diagram.

Full text: The purpose of providing the Illustrative Master plan (drawing ref: 97069/07) is to demonstrate that there is sufficient land available within the locations to accommodate the growth; in fact, the area could take more. The master plan is designed to be illustrative to show what could be achieved and is by no means the only layout option. In addition, the master plan illustrates a workable and tested improvement to the access to King Edmund School and shows a possible location for the 3.0 hectare expansion of the school, required by policy CLT 3. It is understood that it may be more viable to build a new school either on the existing site or on adjacent land. The master plan option caters for such an eventuality as well as providing options for the layout of housing and public open space. The respondent has commissioned a Highway Access Strategy, which considers the optimum location of access points to serve the land parcels.

The land parcel in the broad location identified in the Core Strategy as East Ashingdon is largely free of constraint and both developable and deliverable in the first five years of the plan period. Sufficient housing land is available to exceed the allocations set out in Policies H2 and there are many advantages to the location, which would allow for additional growth. The respondent owns approximately 28 hectares of land in the general vicinity of the broad locations of "East" and "South-East" Ashingdon abutting the urban area, which would accommodate up to 1000 residential units at 40 dwellings per hectare, as well as providing an additional 3.0 hectares for expansion of the school. The land is available and developable in the short term. It has the following advantages in terms of developability:

- * the site contains a main sewer complete with existing manholes;
- * un-contaminated land in arable use;
- * falls within flood zone 1;
- * abuts the urban area;
- * is accessible and within walking distance of a secondary and three primary schools, shops, services and public transport;
- * accessible to main drainage facilities and utilities;
- * within agricultural land classification 3;
- * located in an area free of special or important landscape or biodiversity designations; and
- * does not contain any important ecological or sensitive habitat areas.

In relation to the Green Belt and the five purposes of including land within the Green Belt:

- * the land parcels would round off or infill the urban edge;
- * there is no possibility of coalescence, the nearest settlement is several miles to the east;
- * the urban extensions will not encroach into the countryside, much beyond the existing urban edge; and
- * the location does not interfere or impact on the setting or special character of a historic town or settlement.

The land parcels are capable of exceeding the allocations set out in the Core Strategy whilst enhancing the access and size of King Edmund School, a vital component in the District's infrastructure. The development will result in only limited harm to the character and appearance of the countryside and as such, the Council should give greater consideration to the production of more detailed assessment through the Site Allocations DPD and an early planning application.

1. Land at East Ashingdon is capable of accommodating a higher level of development

As identified above, and demonstrated by the accompanying masterplan, land at East Ashingdon is actually capable of accommodating approximately around 150 dwellings and this should be reflected in Policy H2.

The allocations in Policy H2 should also allow for flexibility in the number of units possible on any given allocation. A clear statement should be included in the policy, which identifies that the allocations assigned to each location are minimum requirements reflecting advice in KSS14 and would be reliant on the developability of individual sites. Whilst the Council has been reluctant to be specific on the land parcels involved, it has chosen to be specific on the number of

Core Strategy Submission Document

O - 16664 - 8069 - Policy H2 - Extensions to residential envelopes and phasing - i, ii, iii

16664 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

units it expects from each of the broad locations. On further analysis, it could be quite possible that a lack of constraints in a particular area might prompt the possibility, or even the desirability, of providing additional units in any given location. The policy does not appear to allow for this and should be amended to explain that the numbers assigned to any given area are not fixed and that further consideration will be given to the eventual number of units on a site by site basis, through the Allocations DPD. If land such as the site at Stambridge Mill does not come forward, the policy as currently drafted provides no flexibility to ensure that alternative sites come forward.

2. There is no justification for the phasing of development

The Council's limited reasoning for phasing set out in the Core Strategy is not justified. It is also contradicted by the statement found in policies H2 and H3 which states;

"We will maintain a flexible approach with regards to the timing of the release of land for residential development to ensure a constant five year supply of land".

The phasing is either necessary for a material reason set out in the document or the allocation of land will be flexible to ensure a continuous five year supply is maintained. If the phasing is to remain, more detailed explanation is required. In the absence of any reasoned justification, it appears that the main reason for the phasing is to stagger the release of land over the plan period. Staggering development in this way is not necessary if the authority is maintaining a constant 5 year supply. RSS14 advocates that the allocations it provides the districts are minimums and that authorities should not see them as ceilings. The CS is presented in such a way as to imply that the Council could suspend development, if demand exceeds any particular phase. Such an approach, of applying the brakes to keep in line with the phasing of the plan, would be completely at odds with RSS14 and the Government's approach to housing delivery. The Core Strategy does not provide for the possibility of the market delivering more than the RSS minimum allocation or at a faster rate than the phasing allows; this is inflexible and contrary to PPS3, paragraph 52 which recognises the importance of a flexible supply of land for housing. This comment is made without prejudice to our client's land at East Ashingdon as this land can be delivered in the early part of the plan period in accordance with the policy.

3. The means by which the sites are identified is too vague.

Whilst the respondent supports the general locations identified in the CS, the means by which the land is identified is considered too vague. The respondent does not agree with the Council's opening statement in this section of the Strategy, which states:

"It is not the purpose of the Core Strategy to set out precise locations for new development - this is done through the Allocations Development Plan Document".

Whilst it may not be necessary in Rochford to identify the exact boundaries of strategic sites, the information that is given is too vague. The advice in Planning Policy Statement 12, Local Spatial Strategy (PPS 17, 2008) is that:

"Core Strategies may allocate strategic sites for development. The Core Strategy looks to the long term. It may be beneficial to delivery of its objectives for details of key sites to be included in it, where these sites are central to the achievement of the strategy and where investment requires a long lead-in"

Further, at paragraph 4.3, it states:

"it is essential that the core strategy makes clear spatial choices about where developments should go in broad terms. This strong direction will mean that the work involved in the preparation of any subsequent DPDs is reduced. It also means that decisions on planning applications can be given a clear steer immediately."

There can be little dispute, that the greenfield locations identified in the Core Strategy are essential to the delivery of the spatial strategy. At present, the district cannot demonstrate a 5 year supply of housing land, as required by PPS3. The lack of a 5 year supply may result in a rash of early planning applications coming forward on greenfield land, which could undermine the Council's spatial strategy and the preparation of the Allocations DPD. To guard against this and to channel development towards the most appropriate locations, the Council has the option of being more site specific in its Core Strategy. This option would in principle be supported by PPS12 and could apply to the delivery of one or more of the Ashingdon locations identified in Policy H2 and thus assist the Council in demonstrating a five year supply of housing land.

It is acknowledged in Policy H2 that the Council will be flexible with regard to the timing of the release of land to ensure a five year supply of land. Therefore, there is no reason not to be site specific on sufficient land that will bring forward development to meet the Council's current 5 year shortfall. The respondent feels that the land north and south of Brays Lane would be one such location, which could be specifically allocated in the Core Strategy. The land has been broadly identified by the Core Strategy and its early release would ensure a continuous five year supply, assist in the delivery of public open space, a long held aspiration of the Local Plan and more importantly, resolve a long standing and the pressing need to improve access to King Edmund School.

4. The names of the allocations are misleading and are not consistent with the Key Diagram

Whilst the respondent supports the allocations described as East and South-East Ashingdon and the locations indicated on the Key Diagram, the names given to the allocations causes unnecessary confusion.

The Key Diagram does not have symbols identifying the extensions to the residential envelope at geographical

Core Strategy Submission Document

O - 16664 - 8069 - Policy H2 - Extensions to residential envelopes and phasing - i, ii, iii

16664 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

locations, which correspond with land that would be understood as East and South-East Ashingdon. The Ashingdon parish boundary terminates along Brays Lane. The land south of Oxford Road is thus fully within Rochford. We submit that the allocation under policy H2 covering land north and south of Brays Lane should be described as South Ashingdon. The land south of Oxford Road should be described as North East Rochford.

The infrastructure requirements set out in Appendix H1 appear to be linked to the individual greenfield release of land and therefore the provision of site specific contributions, not district wide off-site provision. The infrastructure required for each release set out in Appendix H1 can be adequately secured through Planning Obligations attached to the planning consents relating to the individual releases of land. The obligations would then ensure that the infrastructure for the site took place ahead of occupation.

Proposed Amendment to Policy H2: In order to maximise the development potential and delivery of sites and make the policy sound, the following changes should be made to the policy:

- * Combine policies H2 and H3 and delete reference to the different time periods;
- * Amend "East Ashingdon" to read "South Ashingdon" and "South-East Ashingdon" to read "North-East Rochford"; and
- * Amend the capacity of the site identified as East Ashingdon (i.e. north and south of Brays Lane) to 150 dwellings.

Masterplan/Facilities plan Council ref AE22

Summary:

Summary: The Respondent finds the document to be unsound in its present form, however were the amendments set out in these representations to be incorporated then it is considered that the document will be sound. The general locations identified in the Core Strategy (CS) are supported. However, the respondent has prepared an indicative master plan illustrating an option for the broad locations in Ashingdon. This demonstrates that the site known as East Ashingdon could accommodate more than 150 dwellings and it must be recognised that to deliver enhancements to King Edmund School and remain viable, these sites will need to deliver this quantum of development. There is no justification for the phasing of the residential site and therefore policies H2 and H3 should be combined. In addition, the means by which the sites are identified are too vague and the general locations are not consistent with the key diagram.

Masterplan/Facilities plan Council ref AE22

Change to Plan

Proposed Amendment to Policy H2: In order to maximise the development potential and delivery of sites and make the policy sound, the following changes should be made to the policy:

- * Combine policies H2 and H3 and delete reference to the different time periods;
- * Amend "East Ashingdon" to read "South Ashingdon" and "South-East Ashingdon" to read "North-East Rochford"; and
- * Amend the capacity of the site identified as East Ashingdon (i.e. north and south of Brays Lane) to 150 dwellings.

Full Text: ROCHFORD CORE STRATEGY SUBMISSION DOCUMENT, SEPTEMBER 2009
RESPONSE OF ESSEX COUNTY COUNCIL

1. General Comment

Essex County Council welcomes and broadly supports the Core Strategy prepared by Rochford District Council. The Strategy contains policies and proposals that address the spatial characteristics, issues and opportunities facing the District whilst respecting the distinctive qualities of the different settlements and parts of the District.

The County Council fully supports the maintenance of a strong policy approach to protection of the Green Belt and of the quality of environmental assets in the District whilst making adequate housing and employment provision within the District. The Core Strategy presents an approach that emphasises a balance of opportunity through the District and recognition of emerging economic prospects in the District and neighbouring areas. The intended preparation of more detailed Action Area Plans for London Southend Airport and its environs and for each of the three town centres of Rayleigh, Rochford and Hockley will further enhance the approach of the Core Strategy. The emphasis on the three town centres is particularly welcomed as offering a stimulus to improvement in the services and facilities available locally within the District whilst also affording possibilities of increased community focus.

2. Housing Distribution and Locations

The East of England Plan requires Rochford to provide a minimum of 3,790 additional dwellings between 2006 and 2021. In addition, provision for a further 1,000 dwellings should be made between 2021 and 2025 to ensure delivery of housing for at least 15 years from adoption of the Core Strategy (expected in 2010). Of this total requirement the District Council has identified a capacity of 2,000 dwellings through a Strategic Housing Land Availability Assessment. This means that the Core Strategy has to identify locations for about 1,750 dwellings to be delivered before 2021 and a further 1,000 dwellings between 2021 and 2025.

Policy H1 (The efficient use of land for housing) is supported. However, prioritisation of the reuse of previously developed land within settlements for additional housing is unlikely to provide a sufficient source of provision due to the generally residential nature of existing settlements in the district and the absence of potentially large sites of previously developed land. The assessment of potential for additional housing provision within settlements already includes the proposed re-allocation to substantially residential use of 4 existing employment areas.

Within Policy H2 (Extensions to residential envelopes and phasing) and Policy H3 (Extension to residential envelopes post-2021) the District Council has adopted a balanced approach to the distribution of additional housing locations, which is based on identification of tiers of settlements defined by reference to their accessibility to jobs, services and facilities (some of which lie outside the District) and the need to protect the valued environments within the District. This approach is generally supported, although implementation and delivery of individual schemes should give further thought to securing sustainable functional relationships between proposed development locations and availability of jobs, services and facilities.

The proposed scale and phasing of development at each of the identified locations in Policy H2 and Policy H3 should be capable of being supported by County Council service groups, provided that adequate and timely funding is available. The County Council would wish to work with the District Council to ensure that future infrastructure and facilities would serve and give benefit to the existing adjoining community as well as to the new development. In this respect it is noted that the Core Strategy proposes preparation by the District Council of a Planning Obligations and Standard Charges document (Policy CLT1). The District Council's document should fully reflect the County Council's own approach to this matter as set out in the County Council's 'Developer's Guide to Infrastructure Contributions'.

3. Economic Development

The approach to Employment Growth (Policy ED1) is supported. Given the economic structure of Rochford District the support to be given to protection and enhancement of the role of small and medium sized businesses; enhancement of the District's commercial centres; and development of a skills training academy is particularly welcome. These measures will assist in building on the existing economic resource of the District.

Proposals for the comprehensive development of London Southend Airport and its environs (Policy ED2) are supported.

Core Strategy Submission Document

S - 16687 - 9072 - Policy H2 - Extensions to residential envelopes and phasing - None

16687 Support

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

The further elaboration of proposals through an Area Action Plan will provide a firm foundation to realise the economic regeneration and growth opportunities presented by effective use of the Airport. The recognition of the potential environmental impact of the Airport and the commitment to work to mitigate any adverse impacts on the environment and local amenities is fully supported.

The location of the proposed Eco-Enterprise Centre to the North of London Southend Airport (Policy ED4) is supported. Creation of the Centre would assist reduction of the rate of business start-up failure in the district. Further the proposed location for the Centre would afford a clear offer to businesses within an area of varied business activity.

The continued protection and enhancement of existing employment land (Policy ED3) is supported, as is the identification of 4 existing employment sites for appropriate alternative, substantially residential, uses. Each of the 4 sites affords particular issues and opportunities whereby their redevelopment for other uses and relocation of existing occupiers would confer advantage for the immediately neighbouring areas and for the District as a whole.

4. Town Centres

The town centres of Rayleigh, Rochford and Hockley, and future plans for them, are closely linked to the economic development of the District but also present the opportunity to offer greater community focus within the District. The varied approach being taken to each of these town centres is supported (Policy RTC4, RTC5 and RTC6), notably the recognition of the role and purpose of the town centres beyond retail uses.

The contribution that the County Library service could make to plans for the town centres should not be overlooked. The 5 libraries in the District are substantial footfall draws in their localities and act as a 'community anchor store'. This has knock-on effects in encouraging use of neighbouring retail and service facilities. Further the Library service is currently looking at co-location opportunities for other services within the libraries which would enable them to act as a community focus.

5. Transport

The transport aspects of the Core Strategy are well balanced in identifying potential measures that would meet the needs of existing residents and businesses in the District as well as needs arising from future development. The approach reflects and makes good reference to the transportation aspirations of the County Council. The policy emphasis on close working between the District Council and the County Council to advance the transport aspirations is welcomed and fully supported.

In relation to parking standards (Policy T8 and Paragraph 10.30) the review undertaken by Essex County Council in conjunction with the Essex Planning Officers Association has now been completed. Revised parking standards have been agreed and signed off as County Supplementary Guidance, in accordance with PPS12, and is being applied by the County Council as Local Highways Authority.

6. Coastal Protection Belt

Policy ENV2 (Coastal Protection Belt) is not supported because in its current form it is not a suitable or effective replacement policy for Policy CC1 of the Replacement Structure Plan. Structure Plan Policy CC1 (The Undeveloped Coast - Coastal Protection Belt) currently remains a 'saved' policy of the Essex and Southend-on-Sea Replacement Structure Plan, April 2001 (following a direction of the Secretary of State, dated 27th September 2007, under paragraph 1(3) of Schedule 8 to the Planning and Compulsory Purchase Act 2004). The existing Policy CC1 reads, 'Within the Coastal Protection Belt defined in adopted local plans there shall be the most stringent restrictions on development within the rural and undeveloped coastline situated outside existing built-up areas, and any development which is exceptionally permitted within this Belt shall not adversely affect the open and rural character, historic features or wildlife.'

Core Strategy Policy ENV2 should be revised to include specific reference to,

- * Definition of the boundary of the Coastal Protection Belt in another Development Plan Document;
- * the application of the most stringent restrictions on development within the rural and undeveloped coastline;
- * any development exceptionally permitted not adversely affecting the open and rural character, historic features or wildlife.

7. Historic Environment

The importance of the historic environment in Rochford District is clearly identified within the Core Strategy document. Nevertheless, the policy guidance could be usefully enhanced to promote consideration and enhancement of the historic environment and use of the historic environment to shape place. This would be achieved by the following amendments to the Core Strategy,

- * Policy ENV1 (Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites) should be amended by deletion of the final sentence and its replacement with, 'The Council is committed to the protection, promotion and enhancement of the diverse historic landscape and extensive surviving archaeological deposits of the District.'

Core Strategy Submission Document

S - 16687 - 9072 - Policy H2 - Extensions to residential envelopes and phasing - None

16687 Support

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

* Paragraph 8.15 of the supporting text should be amended to better support the suggested amendment to Policy ENV1. The existing text of Paragraph 8.15 should be deleted in its entirety and replaced by,
The historic environment of Rochford District has developed through a history of human activity that spans over 450,000 years. Much of the resource lies hidden beneath the ground in the form of archaeological deposits. Other elements such as the historic landscape, the pattern of field, farms, woods and grazing marsh which characterise the District, are a highly visible record of millennia of agriculture, industry and commerce. Of particular significance are the coastal, island and estuarine areas where multi-period landscapes reflecting the exploitation of coastal and marshland resource survive. The District also includes the important historic medieval market towns of Rochford and Rayleigh.

* Page 16 (Sustainable Community Strategy Priority: Promoting a Greener District) should be amended to further support the approach to the Historic Environment. The fourth bullet of the Key Section/Policies of the Core Strategy should be amended to include the word 'historic', so that the first sentence of the bullet would read,
The Environment chapter seeks to protect and enhance the biodiversity, historic and natural environment of the District by protecting sites of local, national and international importance.

8. Community Infrastructure

The approach to Community Infrastructure is supported. The County Council would wish to work with the District Council to ensure that future community infrastructure and facilities would serve and give benefit to the existing adjoining community as well as to the new development. In this respect it is noted that the Core Strategy proposes preparation by the District Council of a Planning Obligations and Standard Charges document (Policy CLT1). The District Council's document should fully reflect the County Council's own approach to this matter as set out in the County Council's 'Developer's Guide to Infrastructure Contributions'.

In addition, it should be noted that,

* Some County Council services are not highly visible despite being regarded as highly desirable community services by local residents. The need to ensure adequate funding and contributions to enable these services to meet community expectations should be recognised and acknowledged in consideration of planning obligations and standard charges.

* The Adult Community Learning Centre at Rocheway, Rochford could be better located with regard to the wider Rochford/Castle Point area of service. Relocation of the Centre could provide opportunities both at the new location and for the current site.

* The Core Strategy should make specific reference to,

o Appendix H1, Location at South Canewdon: new Early Years and Childcare facilities;

o Policy CLT2, final sentence: insert after the words 'primary schools' the words 'and Early Years and Childcare facilities';

o Appendix CLT1, Other issues/comment: for Early years and childcare facilities add 'Land to be allocated within new residential areas, as appropriate'.

9. Implementation, Delivery and Monitoring

The inclusion in the Core Strategy of a section considering Implementation, Delivery and Monitoring is welcomed and supported. Nevertheless, the District Council, in moving towards implementation and delivery of the individual elements of the Core Strategy, should highlight those schemes and projects that are critical to achievement of other aspects of the Strategy.

Further, the monitoring proposal for Policy H6 (Lifetime Homes) and for Policy CP1 (Design) should be amended,

* Policy H6 (Lifetime Homes) - the identified monitoring tool is Core Indicator H6 Housing Quality Building for Life Assessments. The Building for Life Assessment methodology was devised to measure the overall design/layout quality of housing developments. It was not devised to measure compliance with Lifetime Homes, which is largely, but not exclusively, concerned with internal space standards and the provision of internal arrangements within dwellings to meet needs of all residents.

* Policy CP1 (Design) - the monitoring indicator proposed by the Core Strategy is not supported because it is unclear what the indicator would actually be measuring. The proposed indicator should be replaced by the Core Indicator, Housing Quality - Building for Life Assessments, as suggested by the County Council in its response to the Core Strategy Preferred Options, October 2008. A better approach would be to base evaluation and monitoring of Policy CP1 on the Commission for Architecture and the Built Environment's (CABE) 20 Building for Life principles, particularly as Government has endorsed these principles and is urging local authorities to use them to assess design quality. It is suggested that the monitoring arrangements for Preferred Option CP1 be deleted and replaced by the following text, 'The success of the implementation of this policy will be monitored by assessing schemes, or an appropriate sample of schemes, against the Commission for Architecture and the Built Environment's (CABE) Building for Life principles.'

10. Access to Housing

The Core Strategy notes the higher prevalence of older people in Rochford District and the need to support them. However, a more broadly based approach to access to housing should be adopted by Policies H4, H5 and H6. It should recognise the presence of other vulnerable adults in the community, for example, those with learning or mental health disability, and the range of possible forms of accommodation, including supported, sheltered and extra care accommodation. The high level of owner occupation in the District further emphasises the need for a broader approach. The emphasis on Lifetime Homes would not address the variety of future needs, whilst the potential exemptions to the

Core Strategy Submission Document

S - 16687 - 9072 - Policy H2 - Extensions to residential envelopes and phasing - None

16687 Support

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Summary: Lifetime Homes policy standard in Policy H6 are likely to act against demographic trends. Within Policy H2 (Extensions to residential envelopes and phasing) and Policy H3 (Extension to residential envelopes post-2021) the District Council has adopted a balanced approach to the distribution of additional housing locations, which is based on identification of tiers of settlements defined by reference to their accessibility to jobs, services and facilities (some of which lie outside the District) and the need to protect the valued environments within the District. This approach is generally supported, although implementation and delivery of individual schemes should give further thought to securing sustainable functional relationships between proposed development locations and availability of jobs, services and facilities.

The proposed scale and phasing of development at each of the identified locations in Policy H2 and Policy H3 should be capable of being supported by County Council service groups, provided that adequate and timely funding is available. The County Council would wish to work with the District Council to ensure that future infrastructure and facilities would serve and give benefit to the existing adjoining community as well as to the new development. In this respect it is noted that the Core Strategy proposes preparation by the District Council of a Planning Obligations and Standard Charges document (Policy CLT1). The District Council's document should fully reflect the County Council's own approach to this matter as set out in the County Council's 'Developer's Guide to Infrastructure Contributions'.

Full Text: Re: Objection to Rochford Core Strategy 175 Houses in Hawkwell is Unsound

The proposal in the Rochford Core Strategy for this many houses in the Ward of Hawkwell West in UNSOUND because the vital requirements of the Government's Planning Policy are not met in terms of sustainability, and, therefore, the location of Hawkwell West (South Hawkwell) should be removed by The Inspector and the allocation moved to a sustainable location. In summary the reasons that development in this location is unsustainable under the Planning Policy are as follows:

Travel

Limited public transport - one bus an hour
Increase car use causing heavy congestion - main road through Hawkwell is almost at its full capacity
Inability to improve highways - attended recent meeting involving Highways Department, there is no improvements to local roads in the foreseeable future
Distance from the shops
Distance from rail stations

Environment

Semi rural location unsuitable for large development
Complete loss of character - Hawkwell is a village, let's keep it a village.
Loss of green belt - green areas should be maintained so that the next generation can enjoy it as we have
Loss of wildlife - an area frequented by badgers, foxes and hawks
No social, economic or environmental benefits whatsoever

Further development in Hawkwell West does not comply to the Core Strategy because the criteria is that a development is located in an area where alternatives to car use are more viable, reducing the requirement to travel. There is no space for development of local roads, especially in Rectory Road and any development here would increase the requirement to travel, especially by car.

Finally, such a large-scale development would lead to an unwelcome strip coalescence of built settlements, which is not in line with the Council policy.

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Respondent: Ms C Dutton [8685]

84 Thorpe Road
Hawkwell
Essex
SS5 4JT

Agent: N/A

Full Text: Re: Public Consultation - LDF Core Strategy

I wish to register my objections to the proposal to build 175 houses in South Hawkwell (which does not exist and is in fact Hawkwell West), on the grounds that it is unsound and legally incompliant with the Council's own Core Strategy and the Government's PPS12 Policy for the following reasons:

Travel

The Core Strategy says 'locate development in areas where alternatives to car use are more viable', 'reduce the requirement to travel', and accompany any development with requisite highway infrastructure to 'mitigate their impact on the existing network'. It is not possible to do this in Hawkwell West as there is not space for development of local roads, especially in Rectory Road, and any development here would increase the requirement to travel, especially by car. Moving on to Public Transport the Core Strategy states that 'planning should be well related to existing public transport where possible'. There is just one bus to and from Southend/Rayleigh per hour with no prospect of Arriva providing an appropriate service in the long term.

I am told Essex County Council has already acknowledge concern with regard to the bottleneck at the railway bridge at St Mary's Church where additional traffic from other proposed developments in the District will 'rate run' to and from the B1013.

In Short:

- Limited public transport
- Increased car use causing heavy congestion
- Inability to improve highways
- Distance from shops
- Distance from rail stations

Environment

The Core Strategy talks about protecting the character of existing settlements and specifically 'seeks to take advantage of development opportunities that will provide social, economic and environmental benefits'. No such benefits would apply to this location and development would be materially detrimental to the character of the existing settlement in Hawkwell West. It also states 'there is a limit to how much infilling and intensification existing settlements can sustain without their character being adversely affected'. This limit has already been exceeded in Hawkwell West. This development, if it is to be off Rectory Road, will cause the urban coalescence of Hockley to Ashingdon via Hawkwell, surely this is not in line with spatial planning.

In Short:

- Semi rural location unsuitable for large development
- Complete loss of character
- Loss of green belt
- Loss of wildlife (I note the Environmental Report does not mention Muntjack deer located on the site)
- NO social, economic or environmental benefits whatsoever

I believe locations for development are based on the 'Call for Sites'. Surely locations should be based on the sustainability criteria within PPS12 and not on something that suits landowners? The proposal in the Rochford Core Strategy for this many houses in the Ward of Hawkwell West is UNSOUND because the vital requirements of PPS12 are not met in terms of sustainability, and therefore the location of Hawkwell West should be removed by The Inspector and the allocation moved to a sustainable location.

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Respondent: Mr J Robinson [10008]

Canewdon Hall Farm
Canewdon
Essex
SS4 3QW

Agent: N/A

Full Text: We are supportive that the council have identified housing provision with Canewdon. It is considered that this location is sustainable due to its location adjacent to the existing village. The provision of development in this location will enable existing village facilities to be supported and retained. Furthermore there is sufficient adjacent to the village to provide comprehensive development.

The change we would like to see is that policy H2 is altered to refer to North West Canewdon or simply Canewdon. It is considered development can be better located on Brownfield site of the farm yard and waste ground rather than Greenfield sites. Development in this location will be constrained by the existing contours of the land. The allocation of land will be further considered in the Allocations Document following the SHLAA and as such the reference to Canewdon within the Core Strategy should be less site specific within this general strategy.

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Respondent: Mr L A Norris [10076]

384 Rectory Road
Hawkwell
Essex
SS5 4JU

Agent: N/A

Full Text:

I submit herewith my objections to this Council's core strategy concerning future development of 175 houses in Hawkwell West.
In response to the proposal to build 175 (core strategy) or 30 (planning request Wilson homes) new homes off of Rectory Road Hawkwell. I find the proposal absolutely horrifying, totally insensitive to, out of keeping with, and a blot on the landscape for, the area proposed.

This proposed development is totally UNSOUND in my opinion for the following reasons. The infrastructure of the area will not sustain the influx of 1200+ people, our schools are already full and desperately short of teachers, there is only one NHS dentist with a huge waiting list and since the death of Dr Sen his Rochford and Hawkwell surgeries have been manned by locums as no full time Doctor can be found, in fact the Hawkwell surgery is to be closed for this reason. Our water pressure is limp to say the least, and there are on average 2 power cuts a year, after any kind of heavy rain the junction of Rectory Road and main road floods as the drain cannot take the flow. As for Rectory Road it is already struggling with the extra demand of traffic from Ashingdon cutting through to Cherry Orchard way and the A127. The approach from Rayleigh down Main Road past the Spa PH is a nightmare already and very often backs up from the Spa PH to Bullwood Hall. Ashingdon Road is a no go zone at school drop off/pick up times as are the roads around greensward academy/Hockley station area. These roads cannot cope with an additional 500+ cars and as far as I can see the only pathetic suggested remedy, is to widen the junction of Rectory Road and Main Road to allow 2 exits lanes, as this widening of the junction only goes a few metres it will do absolutely nothing to alleviate congestion at this junction, and what of return journeys into Rectory Road?

There is also a question of employment, we have a gross lack of local employment, and it therefore follows that the majority of the people moving into these homes will have to commute.

As for the land itself, much of it is green belt, so designated to stop exactly this kind of urban sprawl proposed. There is an area of trees to the rear of my property covered by a preservation order; I was told by one of "WILSON HOMES" representatives that some of the main substantive ones will be kept.

They "ALL" have a preservation order and they "ALL" must be kept.

I was told if they have an order they would be. However, I know darn well that if they are in the way, and they will be, they will just cut them down one dark night and pay the fine accepting it as a mild irritation.

And without a care for the environment or the wildlife these wooded areas support.

To summarise:

- We have limited public transport
- There will be increased car use causing heavy congestion
- An inability to improve highways
- An unwalkable distance from shops and railway
- This is a semi rural area unsuitable for large development which will suffer complete loss of character
- There will be a loss of wild life and habitat
- A loss of green belt
- No social, economic or environmental benefit
- There is also a limit to the infilling and intensification an existing settlement can sustain, a limit already exceeded n Hawkwell west
- All of these items are key to the core strategy

Finally

This proposal will completely change the environment in which I live and love. I do not want to live bordered on 3 sides by a huge housing estate and

On the fourth side by a really busy road with all the noise and pollution it will produce. I do not want to live through years of construction noise, and vehicles thundering past my house covering the road with mud and my house and garden in dust.

I ask you to reject this proposal

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Respondent: Hawkwell Residents Association (Mrs A Heath) **Agent:** N/A
[7423]

Hawkwell Residents Association
2 Englefield Close
Hawkwell
Essex
SS5 4LE

Full Text: The Hawkwell Residents Association has discussed the RDC Core Strategy Submission document and wishes to object on the grounds of unsoundness or legally non compliant due to the following points:

- Producing a heavy weight document that prevented printing and general distribution was an unfair method of consultation.
 - This document does not fully take into consideration the impact of the JAAP report and the reports for the proposed redevelopment of Hockley, Rochford and Rayleigh.
 - The stated government policy of using 60% brown field sites first before green field seems to have been reversed, with many potential sites for building being of a green field nature.
 - If the 175 homes were to be located in one place it will change the nature of the village. We believe it would be better to spread them throughout the Hawkwell area. Consideration should be given to the proximity of shops and schools as due to the lack of public transport additional car usage would result.
 - That comprehensive consultation has not taken place with ECC, other district councils, local parish/town councils, residents associations and other interested parties in and around our district.
 - The additional homes will put an enormous strain on the infrastructure of our area, particularly the road system, which has not been addressed in the document.
 - Loss of Green Belt in our area, which would change our village into a town.
 - Additional vehicles on the roads from the building of the new homes, the additional residents, their delivery services and visitors and the proposed airport expansion traffic.
 - Additional demand on our doctors and dentists.
 - Additional demand on schools and social services.
 - The number 7 and 8 bus has now been reduced to mainly one bus an hour and there is now no evening number 8 service.
 - Additional demand on gas, electric, telephone, water, sewers and surface/storm water drainage.
 - Moving Eldon Way and the Foundry Estate to a green belt site at the airport area will increase mileage for employees and the lack of public transport will limit employment to car users. We believe cycling would be a poor and unrealistic substitute.
 - ECC have stated that the B1013 is now running at 72% capacity. The Core Strategy proposal would bring the traffic to an unbearable level. No details and estimated costs are given of the many road improvement we believe would be necessary as listed below.
 - This area is enclosed by the River Crouch, the sea and the Thames and is only properly accessed from the west. For this reason we believe the sensible place to locate additional homes would be in the western part of Rochford district.
 - We believe that no major infrastructure improvements have been carried out in the Hawkwell area for more than 30 years. We also believe that the following infrastructure improvements in the Hawkwell/Hockley area, that are not included in the Core Strategy document, should be addressed before any additional homes are built:
1. Replacement of Rectory Road Railway Bridge for two-way traffic.
 2. Computer controlled traffic lights at the Rectory Road/Hal Road junction.
 3. Upgrade Rectory Road and widen road and footpath at the Christmas Tree Farm area.
 4. Upgrade the B1013 Hall Road and provide missing and upgrade existing pavements.
 5. Proper main road street lighting for the B1013 Hall Road and B1013 Rayleigh Road.
 6. A cycle path route from Rochford through Hockley to Rayleigh.
 7. A new pelican crossing in B1013 Main Road near Tudor Way.
 8. Return to two buses an hour in both directions for the 7 and 8 services between Southend and Rayleigh and the return of the 8 evening bus service.
 9. Improvements to all services including gas, electric, telephone, water, sewers and surface/storm water drainage.
 10. Increase capacity at all the local schools in the area.
 11. Increase capacity at all the local doctors and dentists and hospital services in the area.
 12. Increase ambulance, fire and police emergency services.
 13. Provide and run a youth club in the Hawkwell area.
 14. To provide and run allotments in the Hawkwell area.
 15. To extend the existing Cherry Orchard Park to Mount Bovers Lane and Hockley Woods.
 16. Replace the existing Hockley Spa roundabout with a wider traffic light junction complete with pedestrian cross lights.
 17. Install a double mini roundabout at Station Road and Station Approach junction with Spa Road for Hockley Station.
 18. Install a mini roundabout on the B1013 at Folly Lane.
 19. Make up/upgrade Plumberow Avenue through to Lower Road in Hockley complete with pavements, main road street lighting and a mini roundabout at the Lower Road junction.
 20. Upgrade Watery Lane/Beeches Road in Hullbridge from Lower Road complete with pavements, main road street lighting and a mini roundabout at the Lower Road junction.

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Respondent: Mr M Purkiss [14253]

Hawkwell Hall Farm
Rectory Road
Hawkwell
Essex
SS5 4LL

Agent: N/A

Full Text:

We are supportive that the council have identified housing provision with Hawkwell. It is considered that this location is sustainable due to its close proximity to existing town centres. The provision of development in this location will enable highway infrastructure improvements which will ease current congestion. Existing previously developed sites existing within Hawkwell, (e.g. Magees Nurseries) offer opportunities for redevelopment of Brownfield land in line with government objectives. Furthermore there is sufficient adjacent land in this location to provide comprehensive development.

The change we would like to see is that policy H2 is altered to refer to North Hawkwell or generally to Hawkwell. It is considered development can be better constrained by the existing railway in the north of Hawkwell and will prevent sprawl to the south however this will be further considered in the Allocations Document. The reference to Hawkwell within the Core Strategy should be less site specific within this general strategy.

Existing previously developed sites existing within Hawkwell, (e.g. Magees Nurseries) offer opportunities for redevelopment of Brownfield land in line with government objectives. Furthermore there is sufficient adjacent land in this location to provide comprehensive development.

Full Text: Core Strategy Submission Document - Rawreth

The local development framework which includes building 770 houses between London Road and Rawreth Lane. This plan is totally unsound for the following reasons:-

- i) We are a rural community, this development would double our population of Rawreth.
- ii) Productive farmland should not be allowed to be developed on. Food is going to be in serious short supply in the near future.
- iii) There are other Brownfield sites that can be used instead.
- iv) Building on this land will put unsustainable pressure on our B roads and amenities.
- v) We are unfortunate to have an Asda supermarket on our housing estate. We already suffer with noise from the lorries and refrigerated lorries, car alarms ringing in the car park. This development would double the amount of lorries into Asda and cars into the car park.
- vi) Please think how this will affect our lives.
- vii) Please put the existing residents health and welfare first.

Agent: N/A

Full Text:

I am writing to object to Rochford's Core Strategy for 175 houses in Hawkwell which I believe is unsound.

The proposal in the Rochford Core Strategy for this many houses in the Ward of Hawkwell West is unsound because the vital requirements of the Government's planning policy are not met in terms of sustainability, and therefore the Hawkwell West (South Hawkwell) should be removed by the inspector and the allocation moved to a sustainable location.

In summary I object to this application for the following reasons.

1. Increased congestion on roads. The B1013 and surrounding feeder roads are already nearing their safe maximum capacity.
2. Inability to improve highways. The current road ways cannot accommodate the increased traffic without significant widening and improvements.
3. Distance from shops. There are no shops located within walking distance of this development.
4. Limited public transport. The current bus service is poor and Arriva have no plans to improve it.
5. Distance from railway station. Distance to the railway station and the lack of public transport will only encourage the use of private cars.
6. Semi-rural location unsuitable for large scale development. Any large scale development would mean a continuous coalescence of development between Hockley and Ashingdon via Hawkwell with the subsequent loss of community identity.
7. Loss of green belt. It is the council's duty to protect Green Belt from development at all cost. Brown field sites should always be preferable.
8. Loss of wild life. Wildlife diversity in the area will be reduced and the loss of habitat will almost certainly see the extermination of Muntjac deer in the area.
9. Loss of character. Rochford District Council has a duty to promote healthy communities and maintain the character of the area.
10. No social economic or environmental benefits.
11. Drainage system is not built for more housing.

Summary:

The proposal in the Rochford Core Strategy for this many houses in the Ward of Hawkwell West is unsound because the vital requirements of the Government's planning policy are not met in terms of sustainability, and therefore the Hawkwell West (South Hawkwell) should be removed by the inspector and the allocation moved to a sustainable location.

Agent: N/A

Full Text: We wish to object to the above strategy as submitted because its not sound.

1. The Hockley town centre, Rochford town centre, Rayleigh town centre action plans have not been completed and the Jaap report has still not been finalised. There could be a planning inquiry into the planning application for the expansion of London Southend airport. That could well put in doubt the assumptions for employment growth predicted in the strategy. Also the site allocation document has not been released. The Housing allocation for West Hawkwell which is listed as South Hawkwell in the plan is not sound. It does not meet PPS12 (even at the reduced housing units to 175) for sustainability. There is limited public transport, resulting increased use of the car, heavy congestion, together with the inability to improve highways sufficiently to alleviate problems at junctions. The combination of the sites for West Rochford Ashingdon and Hockley will contribute to congestion on Hall Road Ashingdon Road and Rectory Road.

The distance from shops schools and train stations. The loss of trees hedges and greenbelts. The loss of character of the rural part of west Hawkwell. We believe that West Hawkwell/South Hawkwell allocation should be removed from the plan because the housing allocation will provide no social economic benefit. The Council says Rayleigh is the most suitable place for development but are not proposing any new development sites to be released prior to 2015.

The government's policy of 60% brownfield sites, and 40% greenbelt sites has not been met. Most of the housing and employment land proposed is in the greenbelt.

The proposed sites for housing and employment are unsound because their development, relies on relocation of industrial units to new sites to allow for housing on existing employment, relies on relocation of industrial units to new sites to allow for housing on existing employment sites.

For the above reasons we believe that the core strategy submission document is unsound.

Summary:

1. The Hockley town centre, Rochford town centre, Rayleigh town centre action plans have not been completed and the Jaap report has still not been finalised. Full Text: Policy H2 is unsound as it is unjustified, ineffective and contrary to government policy.

Policy H2 provides for the major release of several Greenfield sites that fall within areas protected by Green Belt policies. Land North of London Road, Rayleigh is identified to deliver some 550 dwellings. This land is at risk of flooding and/or development of this land is likely to significantly increase flooding at Rawreth Brook and Church Road.

Supporting document received Council ref AE23

Detailed flood risk assessment must be carried out, prior to possible identification of the site in the Core Strategy, to ascertain the flood risks arising from development of this land.

Policy H2 should also be amended to delete, or reduce the quantum of residential identified at London Road, Rayleigh. Hambro Nursery and Clovelly Works should be identified as a suitable and sustainable site for redevelopment of up to 90 dwellings (see attached brochure).

Suffolk
IP3 9JD
United Kingdom
01473 706007

Full Text: The background evidence includes the Essex Thames Gateway Water Cycle Study Scoping Report carried out by Scott Wilson and completed in March 2009 however the findings of this report have failed to be captured in the policies of the Core Strategy (with the exception of the water efficiency requirements related to the Code for Sustainable Homes in Policy ENV9).

The Scoping Report identifies that in terms of water resources, Essex and Suffolk Water are currently operating at a demand-supply deficit during dry years and that, although the approval of the Abberton reservoir scheme will largely alleviate these problems in the future, the deficit will remain until this scheme comes online in 2014. The Scoping Report therefore recommends that, as well as seeking high levels of water efficiency in new and existing developments, new development is phased up to 2014.

In addition to the water resources issue, the Scoping Study also that there are some potential capacity issues with both the Rochford Wastewater treatment works (WwTW) and the sewerage network associated with it which would need resolving around 2015. There might also be some issues with the quality of discharge from the Rayleigh East WwTW which will require further investigation but could be exacerbated by unphased growth.

In terms of water quality, the three WwTWs serving Rochford District - Rochford, Rayleigh East and Rayleigh West - discharge to tributaries of the Rivers Roach and Crouch which are Shellfish Waters and flow into areas designated under national and international environmental legislation (SSSI, SPA and Ramsar designations) and the water quality of these watercourses is generally poor. Page 48 of the Scoping Study states that further development draining to these three WwTWs has the potential to exacerbate the problem. Again further investigation is required into this issue.

In not addressing the findings of this report we deem the Core Strategy to be unsound in that it is not effective. This is because we do not believe that the Policies set out in the Core Strategy have clearly identified the infrastructure implications of the strategy and the delivery mechanisms and timescales for implementation have not been addressed. There is also an element of inflexibility in failing to recognise the findings of this report and the potential impact on growth delivery.

In order to make the Core Strategy sound, it must incorporate the findings of the Water Cycle Study Scoping Report and recognise the potential constraints to development delivery.

Referring to the report in Policy H2 would be an option. At this stage in the process we would consider it sufficient to include a statement about the intention to phase development in line with the findings of the Scoping Report and subsequent Outline and Detailed Stage Water Cycle Studies. The Site Allocations DPD would require more detailed information to inform the phasing so as to avoid bringing forward sites prematurely.

Please note that should the Inspector deem it necessary for us to attend the Examination in Public, we would be happy to do so but our preferred method at this time would be written representations.

Summary: The background evidence includes the Essex Thames Gateway Water Cycle Study Scoping Report carried out by Scott Wilson and completed in March 2009 however the findings of this report have failed to be captured in the policies of the Core Strategy (with the exception of the water efficiency requirements related to the Code for Sustainable Homes in Policy ENV9).

The Scoping Report identifies that in terms of water resources, Essex and Suffolk Water are currently operating at a demand-supply deficit during dry years and that, although the approval of the Abberton reservoir scheme will largely alleviate these problems in the future, the deficit will remain until this scheme comes online in 2014. The Scoping Report therefore recommends that, as well as seeking high levels of water efficiency in new and existing developments, new development is phased up to 2014.

In addition to the water resources issue, the Scoping Study also that there are some potential capacity issues with both the Rochford Wastewater treatment works (WwTW) and the sewerage network associated with it which would need resolving around 2015. There might also be some issues with the quality of discharge from the Rayleigh East WwTW which will require further investigation but could be exacerbated by unphased growth.

In terms of water quality, the three WwTWs serving Rochford District - Rochford, Rayleigh East and Rayleigh West - discharge to tributaries of the Rivers Roach and Crouch which are Shellfish Waters and flow into areas designated under national and international environmental legislation (SSSI, SPA and Ramsar designations) and the water quality of

Core Strategy Submission Document

16848 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

these watercourses is generally poor. Page 48 of the Scoping Study states that further development draining to these three WWTWs has the potential to exacerbate the problem. Again further investigation is required into this issue.

In not addressing the findings of this report we deem the Core Strategy to be unsound in that it is not effective. This is because we do not believe that the Policies set out in the Core Strategy have clearly identified the infrastructure implications of the strategy and the delivery mechanisms and timescales for implementation have not been addressed. There is also an element of inflexibility in failing to recognise the findings of this report and the potential impact on growth delivery.

Please note that should the Inspector deem it necessary for us to attend the Examination in Public, we would be happy to do so but our preferred method at this time would be written representations.

Change to Plan In order to make the Core Strategy sound, it must incorporate the findings of the Water Cycle Study Scoping Report and recognise the potential constraints to development delivery.

Referring to the report in Policy H2 would be an option. At this stage in the process we would consider it sufficient to include a statement about the intention to phase development in line with the findings of the Scoping Report and subsequent Outline and Detailed Stage Water Cycle Studies. The Site Allocations DPD would require more detailed information to inform the phasing so as to avoid bringing forward sites prematurely.

I am writing to object to Rochford's Core Strategy for 175 houses in Hawkwell which I believe is Unsound. The proposal in the Rochford core strategy for this many houses in the Ward of Hawkwell West is unsound because the vital requirements of the Governments planning policy are not met in terms of sustainability, and therefore the Hawkwell West (South Hawkwell) should be removed by the inspector and the allocation moved to a sustainable location.

In summary I object to his application for the following reasons.

1. Increased congestion on roads. The B1013 and surrounding feeder roads are already nearing their safe maximum capacity.
2. In ability to improve highways. The current road ways cannot accommodate the increased traffic without significant widening and improvements.
3. Distance from shops. There are no shops located within walking distance of this development.
4. Limited public transport. The current bus service is poor and Arriva have no plans to improve it.
5. Distance from railway station. Distance to the railway station and the lack of public transport will only encourage the use of private cars.
6. Semi-rural location unsuitable for large scale development. Any large scale development would mean a continuous coalescence of development between Hockley and Ashingdon via Hawkwell with the subsequent loss of community identity.
7. Loss of green belt. It is the council's duty to protect Green Belt from development at all cost. Brown field sites should always be preferable.
8. Loss of wild life. Wildlife diversity in the area will be reduced and the loss of habitat will almost certainly see the extermination of Muntjac deer in the area.
9. Loss of character. Rochford District Council has a duty to promote healthy communities and maintain the character of the area.
10. No social economic or environmental benefits.

Full Text: See accompanying Strutt & Parker Planning Document and Cannon Consulting Initial Highways Access and Accessibility Statement.

(Council ref AE27 and AE27a)

The Submission document fails the test of soundness for policy H2 in terms of not being justified. The removal of housing numbers from Rayleigh and in particular from south west Rayleigh is not founded on a robust and credible evidence base and it is not the most appropriate strategy when considered against reasonable alternatives of allocating sufficient housing in a tier 1 category town which meets the Council's sustainability criteria. Furthermore Policy H2 of the Submission DPD is not considered to be sufficiently flexible to deal with any changes to the RSS by being reliant on less sites and again fails the test on flexibility grounds.

The change required to the DPD to make Policy H2 sound is for the inclusion of the site to the south west of Rayleigh for at least 100 houses in the plan period.

Representation submitted in relation to proposed allocation of housing to the south west of Rayleigh and attendance required at examination to support the allocation of this site which is not in the submission document (see other responses to core strategy).

Full Text: Dear sirs

re Policy H2
Proposal for 550 houses on "land north of London Road

This proposal is UNSOUND. The farmland must be saved because :-

- a) It is a buffer against the unrestricted growth of Rayleigh. This is good farmland which safeguards the countryside from encroachment. Once development is allowed anywhere on it there is no natural stopping point before the A1245.
- b) Brown field sites have been put forward by Rawreth Parish Council which can be used and would enhance the centre of the village without damaging the community identity. The Core Strategy proposals would fragment the village over a large area and more than DOUBLE the population. It would not protect the character of Rawreth.
- c) Building on the land north of London Road would put UNSUSTAINABLE pressure on local roads and amenities, which are already at overcapacity at times.
- d) A large housing estate built on that site would greatly increase the risk of local flooding. Heavy rainfall currently filters down the hill through the ground before seeping into Rawreth Brook, which, further along its course enters a flood plain. "Run-off" from a lot of houses would certainly add to the already established problem that the brook is prone to flooding. This is UNSUSTAINABLE for Rawreth residents and could be considered a breach of human rights.

I therefore object to the Core Strategy Proposals for the above reasons.

1.0 Instruction and Introduction

1.1 Charles Planning Associates Limited (Chartered Town Planners) is Instructed by Swan Hill Homes Limited (Swan Hill) to prepare and submit representations on their behalf in respect of the Rochford District Local Development Framework: Core Strategy Submission (September 2009) Development Plan Document.

1.2 The comments refer to the relevant sections and policy designations in the Submission document, as appropriate.

1.3 The comments set out in this submission are intended to assist the District Council in taking forward its Local Development Framework. It is our intention to continue to be involved in the LDF preparation process and we look forward to the opportunity to comment further at the Examination to the Core Strategy.

1.4 If you have any queries regarding the content of this submission then please do not hesitate to contact:

Peter Kneen BSc (Hons) MSc MRTPI
Planner

2.0 Housing:
Policy H1 - The Efficient Use of Land for Housing

2.1 Swan Hill recognises the importance of seeking to concentrate new developments mainly in the existing urban areas, on previously developed land where possible, particularly in view of the Government seeking to ensure 60% of all such new developments are on previously development land (PDL).

2.2 However, given the character of the District, and the strategic housing requirement of the East of England Plan, Swan Hill supports the approach that the Council must also make provision for additional development on the edge of existing settlements on greenfield sites, particularly in the most sustainable locations. As such, Swan Hill supports that where feasible, the redevelopment of existing employment sites for residential/employment purposes can make a contribution towards the strategic housing requirement, provided that sufficient additional employment land is brought forward to ensure the stability of employment levels in the District, and to ensure employment growth meets the East of England Plan requirements.

2.3 Swan Hill considers that Policy H1 should include consideration that new extensions to existing settlements have regard to their potential impact on the wider characteristics and openness objectives of the Green Belt.

Policy H2 - Extensions to Residential Envelopes and Phasing

2.4 Swan Hill generally supports the approach taken by the Council in this policy. As set out above, Swan Hill consider the Council's acknowledgment that housing requirements should be met through the allocation of land on the edge of the existing settlements is the most suitable way forward to meeting the Council's strategic housing requirement and complies with the advice in PPS3.

2.5 The need for suitable greenfield urban extensions represents the best way forward for the Council to meet its strategic housing requirement, as set out in the East of England Plan. Swan Hill supports the recognition that the potential supply of alternative previously developed sites is limited, without detrimentally affecting the character of the District, and therefore the best way forward is the use of sustainable greenfield urban extensions to the existing settlements of the District.

2.6 However, Swan Hill consider that a fundamental consideration that the District Council should consider relates to the potential impact of the urban extensions on the Green Belt policy has been somewhat overlooked. The wider sustainability credentials of the settlements of the District should only be one of many key considerations for determining the level of expansion. In view of the proximity of Southend-on-Sea to all the main settlements of the District, and the influence this has on the likely location many people would travel for employment and leisure, sustainability of many of the settlements is not a key overarching factor, and greater weight should be placed on the potential impact on the openness of the Green Belt, as this cannot be remedied if development occurs in the wrong location.

2.7 As such, Swan Hill considers that determining the location of growth for the main settlements should be to identify

Core Strategy Submission Document

S - 16874 - 8329 - Policy H2 - Extensions to residential envelopes and phasing - None

16874 Support

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

those locations where the impact on the wider setting of the Green Belt can be minimised. Further justification for those general locations chosen should be identified in Policy H2. In this regard, Swan Hill has serious concerns regarding the removal of Land South West of Great Wakering as a viable option for the growth of the settlement. The development of this area of Great Wakering, in addition to the potential redevelopment of the Star Lane Industrial Estate could provide a more comprehensive development, whilst ensuring that the wider openness of the Green Belt is maintained. Land South West of Great Wakering is significantly better placed to limit the impact on the wider Green Belt than Land West of Great Wakering, and could contribute to the provision of an important amenity and wildlife site for the local community.

2.8 In addition, Swan Hill consider that the Council now has no reserve provision in the event that any of the existing employment sites set out in Policy H1 fail to come forward for development within the envisaged timescale. Further, Land West of Great Wakering has not been identified in the SHLAA as a deliverable site to help meet the strategic housing requirement, contrary to the requirement set out in PPS3.

2.9 As such, Swan Hill would support the provision of suitable sites which could be safeguarded for future development in the likelihood of a shortfall in supply.

Policy H3 - Extensions to Residential Envelopes Post 2021

2.10 As set out above, Swan Hill supports the overall approach the Council has taken towards the provision of sustainable urban extensions as a suitable means of meeting their strategic housing requirement. However, as set out for Policy H2 above, Swan Hill has serious concerns regarding the removal of several proposed sites set out in the October 2008 Preferred Options Core Strategy, without any guarantee of the ability to deliver those sites set out in Policy H1.

2.11 As also considered above, the inclusion of West of Great Wakering for 250 dwellings should not be included ahead of South West of Great Wakering, in view of the fact that the site is not identified in the SHLAA as available, suitable and achievable as required by PPS3, and thus is not supported by a robust and creditable evidence base for its inclusion as a strategic site for development.

2.12 Whilst Swan Hill acknowledge that alterations to Policy H1 has resulted in the removal of some locations for growth in Policy H3 (as set out in the Sustainability Appraisal), Swan Hill does not consider that the most appropriate locations have been chosen.

2.13 In addition to the matters raised above, the use of West of Great Wakering would also result in the loss of valuable agricultural land, which clearly in a Green Belt location, should be less suitable for development than other sites, such as South West of Great Wakering, which would have limited impact on the wider Green Belt policy, and not result in the loss of valuable agricultural land.

2.14 Finally, in respect of Policies H1, H2 and H3, all of the above comments are based on our interpretation of the Submission Version Core Strategy when compared to the October 2008 Version of the Core Strategy. Without the ability to undertake a detailed assessment of the Council's SHLAA, it is not possible to clarify the proposed Core Strategy position regarding the proposed direction of growth proposed for the settlements in the District. As such, Swan Hill reserves the right to make additional representations regarding the proposed Policies H1, H2 and H3 following the publication of the SHLAA in due course.

Policy H4 - Affordable Housing

2.15 In general terms, Swan Hill supports the approach taken by the Council towards the provision of affordable housing for new residential developments. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H5 - Dwelling Types

2.16 Swan Hill supports the policy provision of H5, and considers that the approach taken by the Council for this policy represents a suitably flexible alternative to stipulating percentages of dwelling mix, sought by some local authorities. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H6 - Lifetime Homes

2.17 In regard to this policy, Swan Hill objects to the Council's policy where all new dwellings should be provided to the Lifetime Homes Standard. Whilst it is acknowledged that the UK has an aging population, Swan Hill considers that seeking to provide Lifetime Homes on all sites is considered to be overly onerous for proposed developers, particularly when considering the requirement for all car parking spaces to be suitable for disabled users, which could result in more schemes becoming unviable. Therefore, the provision of a percentage of Lifetime Homes should be considered through negotiations with the Council at the planning application stage, and should be determined on a case-by-case basis.

3.0 Character of Place: Policy CP1 - Design

Core Strategy Submission Document

S - 16874 - 8329 - Policy H2 - Extensions to residential envelopes and phasing - None

16874 Support

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

3.1 The Town and Country Planning (General Development Procedure) Order 1995 (As Amended) makes the submission of a Design and Access Statement for most types of planning applications a Statutory requirement, and as such, the provision of a Design Brief represents a pre-requisite of all major planning applications.

3.2 Policy CP1 seeks to ensure the provision of good, high quality developments that reflect local characteristics and distinctiveness, this ideology is supported by Swan Hill.

4.0 The Green Belt:
Policy GB1 - Green Belt Protection

4.1 Following the amendments to the wording of the Policy since the October 2008 Preferred Options Core Strategy, Swan Hill is now generally supportive of Policy GB1 and its supporting text. However, as expressed above, it is important that where alterations to the Green Belt boundary occur as a result of the extension of the settlements to meet the strategic housing requirement, both the minimal amount of land is taken and where that land is taken for development, it represents the best available land which has a minimal impact of the wider openness characteristic of the Green Belt.

5.0 Environmental Issues:
Policy ENV3 - Flood Risk

5.1 Swan Hill generally supports the approach set out in Policy ENV3 regarding ensuring development accords with the sequential test of PPS25. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV4 - Sustainable Drainage Systems (SUDS)

5.2 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV4. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV8 - On-site Renewable and Low Carbon Energy Generation

5.3 Whilst Swan Hill recognises the importance of reducing carbon emissions, particularly in new housing developments, and the role this can play in reducing the nations overall Greenhouse emissions. As such Swan Hill is generally supportive of Policy ENV8. It is noted that Policy ENG1 of the East of England Plan sets out a threshold of developments comprising 10 or more dwellings. Swan Hill consider it important for the District Council to justify the reduction in the threshold level.

5.4 Further, no assessment of Policy ENV8 has been set out in the Sustainability Appraisal which justifies the change in threshold from that of Policy ENG1 of the RSS.

Policy ENV9 - Code for Sustainable Homes

5.5 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV9. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

6.0 Community Infrastructure, Leisure and Tourism:
Policy CLT1 - Planning Obligations and Standard Charges

6.1 Swan Hill generally supports the overall approach the Council has taken in Policy CLT1. It is considered Policy CLT1 sets out a degree of flexibility to ensure that all sites are considered on a site-by-site basis, assessing the individual merits of each planning application, in order to ensure the levels of contributions applicable meet the five tests of Circular 05/05. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policies CLT5 - Open Space;
CLT7 - Play Space;
CLT8 - Youth Facilities; and,
CLT10 - Playing Pitches

6.2 Swan Hill supports the need for new residential developments to incorporate a degree of new publicly accessible open space, children's play space, youth facilities and playing pitches, and as such, generally supports the policy approaches taken by the Council.

6.3 However, it is important that whilst the Council may seek to undertake an assessment of providing standard charges for new development, which, as set out in Policy CLT1, this should be based on thorough public consultation and consideration and sound justification. Swan Hill consider that within the provision of a standard charge, it is important that such provision allows for a degree of flexibility to ensure that each site is assessed individually and on its own merits. This is particularly important for those sites close to existing open spaces and facilities. As such, the levels of

Core Strategy Submission Document

S - 16874 - 8329 - Policy H2 - Extensions to residential envelopes and phasing - None

16874 Support

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

open space and recreation facilities required in the 'standard charge' should be based on an up-to-date PPG17 Open Space assessment, which should be used to form a key consideration in the levels of provision likely to be required in the standard charge system proposed.

7.0 Transport: Policy T1 - Highways

7.1 Swan Hill supports the overall objectives set out in Policy T1 requiring developments to be located and designed to reduce the reliance on the private car and to meet the infrastructure needs generated by development or seek to help achieve these needs is acceptable in principle.

7.2 Swan Hill recognises the importance of providing sufficient infrastructure provision to meet the requirements of development, and that where developments have insufficient consideration of impact on existing infrastructure, they should be considered unacceptable and contrary to National policy guidance. However, Swan Hill considers it important to emphasise that the developer's role should not be seen as a means to meet existing shortfalls in provision.

Policy T3 - Public Transport

7.3 Swan Hill is generally supportive of the policy approach set out in T3, however, as set out in paragraph 7.2 above, it is important that the District Council do not consider that it is the developer's responsibility to resolve existing shortfalls in provision of public transport, and any contribution towards additional public transportation provision should only be to mitigate against the additional level of demand likely from the development proposed.

Policy T5 - Cycling and Walking

7.4 Swan Hill supports the general approach to this policy, as Swan Hill recognises the importance of promoting the use of alternatives to the private car. The policy provision acknowledges the need to ensure relevant contributions in the event of additional travel demands generated by individual developments, whilst also setting out additional aspirations for the cycle network in the District.

7.5 As such, Swan Hill considers this policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy T8 - Parking Standards

7.6 The Council has recently (January 2007) adopted SPD on the requirements for parking standards, and as such, Swan Hill generally supports the policy approach chosen by the Council. As set out in the SPD, whilst Swan Hill generally supports the approach taken by the District Council towards setting residential parking standards, in that the Council has recognised that in the suburban areas, even with some access to public transport, the majority of residents will rely on the use of private cars. However, Swan Hill has concerns over the failure of the District Council to comply with the provisions of PPG13: Transport (2001) which sets out that Local Planning Authorities should not set minimum standards for car parking. Whilst it is acknowledged that PPS3 sets out provision for the consideration of local circumstances, it is considered that the Council has not justified this deviation from PPG13's maximum standard.

7.7 Whilst it is acknowledged that such justification may become apparent through the work currently being undertaken by Essex County Council, until such time, the District Council should only seek to apply the maximum standards indicated in PPG13. However, Swan Hill recommends that the District Council make provisions in the wording of the Policy to allow for changes in the event that future policy on car parking standards need to reflect the County standard, following the completion of the County Council review.

8.0 Economic Development: Policies ED3 - Existing Employment Land ED4 - Future Employment Allocations

8.1 In respect of Policies ED3 and ED4, Swan Hill notes that they have changed considerably since the October 2008 Preferred Options document, in that they are site specific regarding the location of the proposed redevelopment of existing employment sites. These four sites are also identified in Policy H1 - Efficient Use of Land, and in general, Swan Hill supports the approach to the redevelopment of these sites (where feasible) based on the assessments of the sites set out in this version of the Core Strategy.

8.2 However, Swan Hill has concerns that these policies might not be considered suitably sound given that insufficient opportunity has been allocated for consultation on their redevelopment. Without the SHLAA being publically available prior to the consultation on this Core Strategy, an insufficient evidence base has been provided to corroborate that these sites are neither suitable or deliverable to meet the test of soundness requirements.

Summary:

Policy H2 - Extensions to Residential Envelopes and Phasing

2.4 Swan Hill generally supports the approach taken by the Council in this policy. As set out above, Swan Hill consider the Council's acknowledgment that housing requirements should be met through the allocation of land on the edge of the

Core Strategy Submission Document

16874 Support

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

existing settlements is the most suitable way forward to meeting the Council's strategic housing requirement and complies with the advice in PPS3.

2.5 The need for suitable greenfield urban extensions represents the best way forward for the Council to meet its strategic housing requirement, as set out in the East of England Plan. Swan Hill supports the recognition that the potential supply of alternative previously developed sites is limited, without detrimentally affecting the character of the District, and therefore the best way forward is the use of sustainable greenfield urban extensions to the existing settlements of the District.

2.6 However, Swan Hill consider that a fundamental consideration that the District Council should consider relates to the potential impact of the urban extensions on the Green Belt policy has been somewhat overlooked. The wider sustainability credentials of the settlements of the District should only be one of many key considerations for determining the level of expansion. In view of the proximity of Southend-on-Sea to all the main settlements of the District, and the influence this has on the likely location many people would travel for employment and leisure, sustainability of many of the settlements is not a key overarching factor, and greater weight should be placed on the potential impact on the openness of the Green Belt, as this cannot be remedied if development occurs in the wrong location.

2.7 As such, Swan Hill considers that determining the location of growth for the main settlements should be to identify those locations where the impact on the wider setting of the Green Belt can be minimised. Further justification for those general locations chosen should be identified in Policy H2. In this regard, Swan Hill has serious concerns regarding the removal of Land South West of Great Wakering as a viable option for the growth of the settlement. The development of this area of Great Wakering, in addition to the potential redevelopment of the Star Lane Industrial Estate could provide a more comprehensive development, whilst ensuring that the wider openness of the Green Belt is maintained. Land South West of Great Wakering is significantly better placed to limit the impact on the wider Green Belt than Land West of Great Wakering, and could contribute to the provision of an important amenity and wildlife site for the local community.

2.8 In addition, Swan Hill consider that the Council now has no reserve provision in the event that any of the existing employment sites set out in Policy H1 fail to come forward for development within the envisaged timescale. Further, Land West of Great Wakering has not been identified in the SHLAA as a deliverable site to help meet the strategic housing requirement, contrary to the requirement set out in PPS3.

2.9 As such, Swan Hill would support the provision of suitable sites which could be safeguarded for future development in the likelihood of a shortfall in supply.

Full Text:

Policy H2 of the Core Strategy is not "sound". Policy H2 pre-allocates residential development "North" of London Road, Rayleigh.

My clients accepted that residential development is to take place in the Green Belt, and that this should be to the West of Rayleigh, but there is no justification why the area to the north of London Road has been selected, as opposed to any other area to the West of the town. This lack of justification pre-judges the forthcoming "call for sites" DPD to be produced by the council and is unsound.

Allocation of the area North of the London Road fails to take account of a number of the criteria of para 4.19 of the Core Strategy document, and would, amongst others; availability of existing infrastructure and the requirement to provide additional infrastructure; Potential to reduce car trips and dependency; Impact on the existing highway network; and encourages the coalescence of Rayleigh and Rawreth. This further emphasises that the strategic decision has not been properly made.

Para 4.5 of the PPS confirms that core strategies should make clear spatial choices about where development should go in broad terms. It does not say that sites should be allocated, which in effect is what policy H2 does.

The policy also refers to appendix H1 which sets out details of local infrastructure. Again this fails to comply with PPS12. Para 4.9 of the PPS requires infrastructure needs and costs to be identified. This has not been completed or published. There is no evidence to support the infrastructure requirements, or who will provide it, or when.

The document therefore fails to comply with PPS12 and is not sound. The reference to north of London Road Rayleigh should be replaced by a general strategic requirement of West of Rayleigh and the technical analysis should be fully considered in the DPD "Site allocations" document.

The site allocation should be general at this stage in order to allow proper consultation of the alternatives. This has not previously been consulted on in the previous options documents.

There are alternative sites to the west of Rayleigh town centre that do not require such a substantial investment to the highway network, that are closer to major transport junctions and interchanges than sites north of the London Road. These considerations do not appear to have been fully taken into account in making the strategic assessment and allocation of sites to the north. Other sites have better highway links and are thus more sustainable, but no assessment has been considered in public. The site allocation in this document flies in the face of national guidance in PPG13. The authority appear to have selected their preferred option from the previous consultation document, but gone one stage further in this publication, refining the defined area further without proper consultation. No Credible alternative sites to the West of the town centre appear to have been considered.

The site allocation should be general at this stage in order to allow proper consultation of the alternatives. This has not previously been consulted on in the previous options documents.

Proposed Change

We request that the policy be changed from "North of London Road, Rayleigh" to refer to "West of Rayleigh", pending further consideration of alternative sites.

We reserve the right to expand on these grounds in more detailed evidence to follow should the Inspector request.

Site location plan received, see Council ref AE30

Representations on the Core Strategy
Submission Document, November 2009
On behalf of Barratts Eastern Counties

Introduction

The requirements of Core Strategies are enshrined in the 2004 Planning and Compensation Act, the Town & Country Planning (Local Development) England (Regulations) 2004 and the 2008 policy guidance in PPS12. The requirements of Coe Strategies are clear. And they are legal requirements. The Core Strategy must comply with the Local Development Scheme, Statement of Community Involvement and the Regulations. The Core Strategy must be subject to a sustainability appraisal, have regard to national guidance, conform generally with the Regional Spatial Strategy and have regard to any Sustainable Community Strategy. A Core strategy must be sound - justified, effective and consistent with national policy. The following representations therefore focus on these legal requirements.

HOUSING

Paragraph 4.6 - Evidence Base

To meet the soundness test Submission Core Strategies (SCS) must be justified, that is to say it must be founded on robust and credible evidence base and comprise the most appropriate strategy when considered against reasonable alternatives. The housing strategy in as far as it identifies a need for Green belt sites is sound, however, there are other elements which are unsound.

Paragraph 4.6 notes that the Strategic Housing Land Availability Assessment (SHLAA) has examined the supply of housing. It is presumed that the Table at paragraph 4.6 is the outcome of this examination. Whilst the SHLAA has some legitimacy in that it identifies various sites that are apparently available, we are concerned that because the SHLAA was only published in November 2009 it post dates the SCS. This implies that the SCS is driving the SHLAA exercise rather than the other way round. Whilst this may have no real practical effect on the outcome of the SCS and the identified need for Green Belt sites, the Inspector will be mindful of the advice in paragraphs 33 and 54 of PPS3 that SCS draw on the evidence in SHLAA. It may be that the SCS should explain how the evidence base has been used to justify the strategy.

PPS12 explains at paragraph 4.37 that Core Strategies are based on thorough evidence. Since the SHLAA has only recently been published it is considered that the SCS is unsound as it is not justifiable. This, together with other comments on the SCS, indicates that the process should be delayed to ensure that a more robust document is placed in front of the EiP Inspector.

Table at Paragraph 4.6 - Evidence base

From our review of the available evidence it would appear that the housing land supply is insufficient and that Green Belt release are required. From the wider strategy being promoted we note that some of the sites that the District Council consider to be 'appropriate' are likely to relate to existing employment areas. As set out elsewhere in our representations, we maintain severe reservations that the redevelopment of existing employment sites for alternative uses and particularly the Eldon Way Industrial Estate is unsustainable. We will make reference to the effectiveness of this strategy in relation to sustainability, whether it is justified in the context of National Policy and the deliverability of such a strategy elsewhere.

In particular, paragraph 11.32 of the SCS refers to existing employment land and sites within the UCS. It does not refer the SHLAA and as such it appears that an evidence base to support the re-use of employment land for residential is not reported in the SCS.

Having reviewed the 2008 Annual Monitoring Report, as we did when commenting on the 2008 Preferred Options Core Strategy, we maintain severe doubts as to the appropriateness of some of the previously developed sites identified as potential housing sites and their expected housing yield. Whilst we cannot at this stage ascertain whether the SHLAA

Core Strategy Submission Document

16919 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

sites referred to in this table correlate with the Annual Monitoring Report and indeed the 2007 Urban Capacity Study, it is our view that there will be some commonality and so the reliance on these sites is likely to be at odds with Government Policy. We shall elaborate on this objection in relation to the specific housing policy below.

We note that the last two rows in the Table at paragraph 4.6 set out figures with and without Green Belt releases. The text to this section of the Core Strategy should, for reasons of clarity, explain that Green belt review will be necessary in order to deliver the required housing.

Paragraph 4.9

The table on page 40, which sets out the settlement tiers, is supported. Rayleigh, Rochford/Ashingdon, Hockley/Hawkwell are clearly the largest settlements in the District and they benefit from good employment, housing, leisure, community and public transport provision. These settlements are the most sustainable ones with the greatest mix of uses. Consequently, it is sensible that the Core Strategy identifies these as top tier settlements and is able to target them with growth accordingly. This component of the strategy is justified by reference to sustainability data and is effective, since targeting development at these locations will ensure a more sustainable pattern of development.

Paragraph 4.14

We maintain that the strategy for redeveloping the Eldon Way Industrial Estate for housing and other alternative uses to employment is unsound. It is neither justified nor effective. The Industrial Land Availability Study 2006 sets out on page 7 strategic objectives. The 3rd objective seeks to Support town centre and industrial estate enhancement initiatives aimed at improving the environment ensuring the area is economically prosperous and competitive. Clearly the strategy as currently drafted envisages major changes to existing industrial estates, including alternative uses. This strategy is not consistent with other strategies and evidence based studies and so cannot be justified in the context of the tests set out in PPS12. It is also an ineffective strategy since the new employment locations that would free up the Eldon Way site for redevelopment relies on transport infrastructure that has no certainty of being delivered. Principally, the erosion of employment uses at Eldon Way could make the settlement of Hockley/Hawkwell less sustainable and thus conflict with the tiered approach on page 40, paragraph 4.9.

Policy H1

Prioritising the use of previously developed land ("pdl") is supported in principle. It is a justified strategy in the context of PPS3 and effective as sequential choices can be made by implementing the policy. However, the District Council is also promoting a strategy which seeks the redevelopment of existing employment locations to alternative uses and by consequence is identifying green field sites for new employment development elsewhere (Policy ED4 refers). This 'land swapping' is not considered consistent with PPS3, nor is it considered to be justified or effective in delivering the desired strategy. This is particularly the case as most of the existing employment sites are occupied and therefore unavailable for redevelopment. In addition, the new Greenfield sites are in an arguably less sustainable locations away from the top tier settlements identified on page 40 of the Submission Core Strategy. Clearly this element of the strategy is inconsistent with the wider strategy.

The Industrial Land Availability Study 2006 is included as an evidence base by the District Council. It includes an introductory section, which explains that the authority wishes to make Rochford the place of choice for new business. It includes several strategic objectives on page 7 including "Support town centre and industrial estate enhancement initiatives aimed at improving the environment ensuring the area is economically prosperous and competitive." It reviews existing employment areas and identifies vacant land, including land available from allocations. It does not include any assessment of new sites or potential opportunities for new sites that might have been expected to feed into the Core Strategy. The strategy for identifying Green Belt site employment allocation does not appear to be based on any evidence in this document and in that context cannot be justified. The strategy being promoted potentially conflicts with Government policy in PPG13, PPG2 and emerging PPS4.

The Employment Land Study 2008 is a much later document. It has a key recommendation on page ii "we recommend that Rochford District Council adopts strong policies to protect existing employment land." Furthermore under recommendations for existing sites on page iii-iv of that document it states "In our view, Hockley Trading Centre is a strategically well placed employment location. However, we recognise the ambitions of the Hockley Town Centre masterplan and that within this the Council should consider it to be allocated for other uses. However, we recommend that this reallocation happen only if provision is made within the masterplan for office use within Hockley Town Centre as part of a mixed use scheme." The view of the writers of this document is clear - the Eldon Way Industrial estate (Hockley Trading Centre) is a good employment site and that it is for other reasons that alternative uses are being considered and only then if office development is supported. This supports our representations that new future uses at the Eldon Way site should be employment dominated and that alternative uses should relate to the objectives of the Town Centre which is to enhance the shopping and leisure facilities. Residential is not an appropriate alternative.

This document recommends the use of land to the west of Rayleigh for employment and envisages Green belt release. However, the SCS does not explain through the evidence base why existing employment sites should be 'deallocated' and Green belt land unnecessarily used.

Core Strategy Submission Document

16919 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

In addition to these key issues we have some specific concerns. As a consequence we maintain an objection to the second paragraph of Policy H1. This policy states that the Council will seek the redevelopment of various industrial estates including Eldon Way. The Policy says that alternative uses will be sought (presumably alternative to the existing employment offer) and that new land will be allocated elsewhere. This policy statement, in relation to Eldon Way in particular, is unsound for a number of reasons:

The emerging Hockley Area Action Plan consulted upon in 2008 states that the Eldon Way Industrial Estate is strategically well placed. In a sense this statement underplays the true importance of this highly sustainable employment location and only major employment area in Hockley/Hawkwell. The employment area is adjacent to the railway station and located a short distance from the main bus routes that run along Spa Road. Some of the residential areas of the town are also within walking distance of this commercial area, thus providing a potential for sustainable travel by employees. The Eldon Way Industrial Estate is therefore right at the heart of the settlement of Hockley/Hawkwell and provides an opportunity to meet sustainable transport objectives by reducing the need to travel by car. Consequently, this employment area should be highlighted as a premier employment site in sustainability terms, both in the context of PPG13, PPG4 and PPS6. To encourage alternative uses as set out in Policy H1 implies the removal of the majority of employment based activity at Hockley/Hawkwell and this would be contrary to National policy, would not be the most appropriate strategy when considered against alternatives and is therefore unsound.

Whilst it is acknowledged that improvement to the Eldon Way Industrial Estate can and should take place, the extent to which the mix of employment uses should be altered in favour of alternative land uses requires careful consideration. It is our view that a mix of existing or indeed new employment land uses with some Town Centre type uses should dominate the Eldon Way site. A mix of employment types between offices, light industry and other high technology industries should be encouraged as this will provide many locational advantages to the firms that agglomerate together. The Council says that the existing uses on this site are harmful to amenity. However, the site has operated for many years without any significant issues and if renewal for B1 type uses are encouraged then the employment area can be maintained without harm to amenity. Renewal of the employment stock can help develop and improve trade, improve the sustainability of businesses as a whole and make for a more flexible labour market as skill levels are varied. A singularly different use altogether or a variety of uses which excludes employment could undermine the long term sustainability of the area and Town Centre. As such Policy H1 is not an effective strategy and should be amended to acknowledge the importance of Eldon Way and the need to renew the employment stock to ensure that the site maintains its important role as a employment site, albeit with some ancillary alternative use development where appropriate.

The 2008 Retail Study notes that Hockley Town Centre is not strong and there is trade leakage. Eldon Way Industrial Estate provides a customer base for existing town centre uses. Weekday spending within town centres is an important contributor to the viability of many retail and leisure businesses either through expenditure by employees during the lunchtime trade or expenditure by employers, on necessary goods and services. This relationship helps sustain the critical mass of a centre and provides a platform for new retail and leisure growth. It is important to have a balanced centre with a variety of uses. Policy H1, as currently drafted, implies the removal of employment related development and this is likely to harm the vitality and viability of Hockley Town Centre. The Council has presented no evidence to suggest that this is not the case. Importantly, the 2008 Retail Study explains that there is a need for additional retail and office space. In principle we would support additional office and other B1 type uses plus retail but employment uses should always dominate for the sustainability reasons given above. Retail and office development are likely to present a viable alternative to some of the more industrial type uses.

Consequently, we do not support the phrasing of the third paragraph of Policy H1 and maintain that the most appropriate strategy is to seek renewal of the employment stock with employment based uses and with some new retail development. Removal of employment land uses completely as currently implied-which was the approach adopted in the emerging Hockley Area Action Plan - is not a justifiable strategy.

One of the key tests of a Core Strategy is consistency between policies in the emerging Plan and this strikes at the heart of demonstrating an effective strategy. Policy H1 implies alternative uses to employment and the relocation of Eldon Way to a site identified under Policy ED4. However, Policy RTC6 sets out a suite of policy criteria for Hockley Town Centre which includes employment and commercial activities. In addition Policy ED3 seeks the protection of sustainable employment sites (Eldon Way) and notes that some reallocation of existing employment sites will include a proportion of employment. It notes that in the case of Eldon Way employment development will form a component. The policies appear at odds with one another. The third paragraph of Policy H1 should be deleted as the second paragraph is sufficient to set a strategic context for delivering new housing development. The employment policies and Hockley specific policies should be left to consider the type and quantum of land uses appropriate in the area. If the third paragraph of H1 is to be retained then it should tie in more with Policy RTC6 and in our view explain that employment uses should dominate any redevelopment proposals for the Eldon Way site and that retail and leisure uses should be a supporting proportion.

Implementation, Monitoring and Delivery - page 132 onwards

One of the key tests of soundness is that the Core Strategy should be effective - it should be able to deliver its strategy. The Implementation strategy set out at page 132 onwards of the Core Strategy does not explain how Policy H1, RTC6 and the strategy for redeveloping Eldon Way (Policy ED2 and ED3) will be delivered. The comment at Policy ED3 on

Core Strategy Submission Document

16919 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

page 161 identifies it as a potential risk and alludes to land assembly difficulties and the choices to be made by owner/occupiers. In order to deliver the strategy there should be a clear understanding as to whether the new land use values being promoted are sufficient to encourage relocation voluntarily. Secondly there is a need for more information to be gathered and presented to show that current occupiers and landowners are willing to relocate and the timescales likely for this. For example, do the building lease contracts enable early review or are there any break out clauses. There should be some commentary on whether the Council will engage in compulsory purchase orders to pursue their strategy should the 'encouragement' route fail. As currently drafted there is no clear path to deliver the strategy and the danger is that despite reallocation, the sites identified for redevelopment will not come forward in the plan period. In this regard, evidence to satisfy the test of soundness is not provided.

Policy H2 - General Locations

We support the strategy that new housing growth should be targeted at land South of Hawkwell. This area is suitably located to the urban area of Hockley/Hawkwell and to tie in with the settlement tiers on page 40 of the Submission Core Strategy the same terminology for settlement should be used. This ensures a consistency within the SCS. The choice of this location as a housing growth area is appropriate as it would not contribute to the coalescence of the urban area with Ashingdon (there is existing development between this identified housing area at Rectory Road and Ashingdon and moreover, Rectory Road can form a natural physical boundary for the new Green belt boundary. This area is also well located to the existing road network. Cherry Orchard Way has recently been improved and provides much better accessibility to the proposed housing growth area than any other location around Hockley/Hawkwell. The existing bus routes along Rectory Road also make this location sustainable and the additional housing proposed will help underpin the financial viability of bus routes in this area. Locally there are employment opportunities, including the small commercial estate off Main Road. The Eldon Way Industrial Estate adjacent to the Town Centre also provides the opportunity for employment locally. Extensive public open space, play pitches and built leisure facilities are located just to the north of this area and a community hall is located off Briar Close, nearby. The area to the south of Hockley/Hawkwell is close to local shops on the corner of Heycroft Road and Main Road and there are numerous footpath links between this area and the local community including links via Thorpe Road, Thorpe Close, Briar Close, Hawkwell Park and Park Gardens. The area therefore provides the opportunity to enhance existing links, including cycle links, and contribute towards community integration - more so than other sites on the south side of this settlement. The site is also in the control of one house builder and deliverable.

However, we find that the Policy is not fully consistent with national policy and furthermore needs to be reviewed in order to be justified and effective. We have concerns as to how the Green Belt review strategy set out at Policy H3 and in the Local Development Scheme integrates with this policy and feel that Green Belt review should be more explicit throughout the SCS. We note that it is only Policy H3 which indicates the need for Green Belt land review. In fact Policy H3 only pays lip service to the need for a Green Belt review and provides, at best, loose advice in this regard. It says that prior to 2021 Green Belt will be safeguarded save for the releases noted under Policy H2. Policy H3 then goes on to talk about land release for development after 2021 but no time period is set out to provide a framework for any Green Belt review in this latter period. In our view Policy H2 and certainly Policy H3 and Policy GB1 should explain fully the need for a Green Belt review and that such a review should take place for a defined period. That such a review has not taken place in advance of the SCS is a serious matter for the Inspector to consider in the context of soundness. That said, it is considered that any review of Green Belt should have regard to a period beyond 2021 as indicated by draft Policy H3. Paragraph 1.9 of the East of England Plan explains "this RSS covers the period to 2021 but sets a vision, objectives and core strategy for the longer term". 2026 is therefore considered a minimum suitable period that any Green Belt review must have regard to in order to meet the 5 year land supply requirements in PPS3 for the period after 2021. However, Policy SS7 of the East of England Plan talks about Green Belt reviews up to 2031. In view of this and the need to explore the circumstances of Rochford - that existing settlements cannot contain future housing growth; that Green Belt is necessary to provide housing; and that these provide exceptional reasons to vary the Green Belt locally (paragraph 2.6 to 2.7 of PPG2) the policies and strategy for the SCS should identify a Green Belt review covering the period to 2031 and set out why a review is necessary.

Policy H2 - Phasing and Quantum

The 2008 Preferred Core Strategy document indicated that the area south of Hawkwell should deliver 330 dwellings over a phasing period to post 2021 (see Policy H2 and H3 of that document). The SCS reduces the quantum of housing in this area to 175 but expects delivery by 2015. At a broader level the Preferred Options Core Strategy of 2008, (Policy H2) required 1,450 dwellings to 2015 and a further 1,050 by 2021. In the SCS the figures are now 775 and 1,010 respectively.

Since the SHLAA post dates the publication of the SCS, we are uncertain as to the reason why such a significant reduction in quantum of housing and extensions to the residential envelope is considered necessary. Presumably it is the 'new' strategy to redevelop existing employment areas within the settlements that has led to this change. Our representations on this strategy and specifically the Eldon Way Industrial Estate are included elsewhere within our representations. Previously we have commented on the Table at paragraph 4.6 of the Submission Core Strategy and the lack of evidence to underpin that table. It seems odd that in the space of a year the expected requirement for Greenfield sites has effectively halved on the basis of a SHLAA exercise. The community is therefore not able to effectively

Core Strategy Submission Document

16919 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

comment on the housing land supply and at this stage the Submission Core Strategy is legally unsound.

That said, we are of the view that the quantum of housing envisaged south of Hockley/Hawkwell should be more than the 175 currently envisage. In coming to this view we have reviewed the Urban Capacity Study and the latest housing figures in the Annual Monitoring Report 2008. We conclude that the shortfall in housing land supply is such that 330 dwellings in this location is appropriate.

The recently published SHLAA is based upon the data obtained from the Urban Capacity Study 2007, a call for sites exercise and data from the Annual Monitoring Report 2008.

The 2007 Urban Capacity Study (UCS)

1. 2007 is widely recognised as being the peak level of house prices in the UK and it was acknowledged by Government and practitioners alike that 2007 house prices were at an unsustainable level. It is our view that utilising the 2007 UCS as an evidence base without reference to the market does not pick up the depressed demand that is likely to now exist. Recent corrections to the housing market now mean that housing land prices are at a much lower and arguably more affordable level than before. The implications are that some pdl may not be viable for housing development. Often brownfield sites have much higher development costs than Greenfield sites and so the yield from urban capacity will be much lower than anticipated in the 2007 study. One example is the employment allocation of the Adopted Local Plan located at 76-92 Main Road, Hawkwell. This site has been allocated for several years and has been available during the most recent rises in residential property prices during 2006-07. As a consequence the lack of progress on the site can only be described by its current occupancy and perhaps it comprises high value uses that do not encourage redevelopment. Despite this the site is identified as having high potential for alternative use and high potential demand. The SHLAA form notes that there is no information on legal constraints (e.g., tenancy agreements) As a consequence it is difficult to see how this could continue to be a potential site and as a consequence the allowance for green field releases should be increased.

2. There are considered to be other instances in the UCS and the recently published SHLAA where the assumptions and calculations would indicate that the 1301 urban capacity figure is over optimistic and the SHLAA assessment is limited. In the assessment of 'non-residential sites in appropriate locations' within the UCS assumptions are made as to the probability of sites coming forward for new housing. 68-72 West Street, Rochford is identified as a high probability site but we note that it has been subject to 7 refusals of planning permission/conservation consent. There is a significant gap between the urban capacity identified as being suitable by the Council and the capacity applied for by the owners. Given its alternate use value, it is debateable whether the two capacity figures can be reconciled. No 247 London Road is another example of a site allocated in the Local Plan but which hasn't come forward. This is now the subject of a proposal for a care home and if approved would further limit the scope for market/affordable housing capacity on the site. A striking example of how the urban capacity study has underestimated is also evidence by 2-4 Alderman's Hill, Hockley - described as a disused service station. There has been no residential development application on this site since 2004 and most recent applications have sought commercial use of the site. Rather than being evidence of housing land deliverability, this particular site evidences the need for commercial uses in the area. There are therefore deliverability doubts over these 'high probability' categories which amount to some 40 units.

3. In relation to the assessment in the UCS entitled 'intensification of existing residential uses' we note that the assessment is premised on an assessment of recent trends taking into account net completions between 2001-2006 and 2005-06. This is effectively an assessment of windfall trends and not an approach that PPS3 encourages. Importantly Table 3-12 in the urban capacity study seeks to project forward urban capacity from residential redevelopment - a period that benefited from high house prices and PPG3 guidance encouraging redevelopment. These two circumstances have markedly changed and so the assumptions and conclusions drawn would also have changed. Even taking into account the UCS discounting, the reliability of the 404 units from this source must be questioned and in our view the 1301 figure cannot be a sound basis for urban capacity and further Greenfield releases are necessary.

4. In the section of the UCS entitled 'subdivision of dwellings' and 'living above the shop' it is estimated that recent trends would result in 7 and 15 units. Our concerns with using trends as a basis for urban capacity are detailed above - PPS3 does not encourage this. Rather, local authorities are charged with surveying their areas, identifying which areas may yield urban capacity and how much and developing policies to achieve that. Government guidance does not encourage the estimation of windfalls in the way the UCS does.

5. Redevelopment of established employment land is a separate section within the UCS. At 1 above we identify the low probability of the Main Road residential allocation coming forward. This remaining section of the UCS considers 11 further employment sites which were first identified in the 2000 UCS. Three of these are considered to have a high probability of coming forward. We have looked at these three sites and can find no evidence that they are likely to come forward. In the 8 years between 2000 and 2008 the three identified high probability employment sites have not been developed and there is no reason to assume that the next 5-10 years will be any different. For example the Rawreth Industrial Estate is identified as being well used in the UCS and although it has some unneighbourly uses there is no indication that the site is available, suitable or deliverable for residential. Land between 39-69 Lower Lambricks, Rayleigh is identified as having a high probability of residential uses. Yet there is no

Core Strategy Submission Document

16919 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

evidence of any pre-application advice or planning applications for this area. Stambridge Mills, Mill Lane, Stambridge is a further example. This site is separated from the urban area, in a flood risk zone and protected in the 2006 Replacement Local Plan by Policy EB9 which promotes B1 uses. Against this background there is only two relevant planning applications affecting this area both date from the early 1990's and relate to a plant room and loading bay. There is no evidence that this is likely to come forward for residential purposes in the next 5-10 years.

6. In the UCS extant permissions are identified as 856 dwellings. It is important to note that this figure needs to be continually reassessed so that from the point of adoption of the Core Strategy a 5 and 10 year housing land supply is available. The SHLAA notes extant permissions for 2009-14 being 106. As noted below extant permissions do not necessarily translate into deliverable sites. There is therefore a contingency that needs to be built in. Further allocations on greenfield land need to be increased and as such the quantum of housing in the area south of Hockley/Hawkwell should be increased to 330 dwellings in order to begin to meet the shortfall identified.

The District Council's 5 year housing supply assessment

7. The District Council's Annual Monitoring Report ("AMR") 2008 purports to demonstrate a 5 year housing land supply. The preamble to Table 4.10 in the AMR 2008 explains that Rochford District Council ("RDC") has included units under construction, units with full permission, units with outline permission, units with a resolution to grant, units subject to preapplication discussion/Urban Capacity Assessment and land allocations in its trajectory. The reader is referred to Appendix B which breaks down the sites in more detail. The recently published SHLAA also includes a table showing a potential 1273 dwellings deliverable. However, it refers to "appropriate brownfield sites." Since these 'appropriate sites' are do not benefit from an application or a planning permission it is difficult to programme them into the housing delivery trajectory.

8. In the full planning permission category of the AMR 2008 where work has not yet started there can be no guarantee that all these sites will be delivered in the 5 years. This comment relates to the one above in relation to the recently published SHLAA. It is not uncommon for permissions to be obtained to provide a means for valuing a site where the owner has no immediate plans to sell the site or develop housing. Delivery may also be hampered by funding constraints, or site assembly problems (where sites are in an alternative use or relocation constraints). Appendix B of the AMR 2008 does not set out the intentions of the landowner or whether the sites are truly achievable in the 5 year period as per PPS3 requirements. The SHLAA purports to show developer intentions at Appendix C but the assessment by the local authority into the legitimacy of some of the claims is not presented. The evidence base is not as full as it should be to demonstrate the robustness of Table 4.6 of the SCS. It is also unclear the extent to which this table is based on either the UCS 2007, AMR 2008, SHLAA 2009 or a combination of all three. This should be set out clearly.

9. In addition, to the 'non delivery' of a proportion of new homes in the AMR 2008, there is concern at the timings of delivery in that data set, for example, 10 units in 2008-2009 relates to outline planning permissions and it is doubtful whether reserved matters can be turned round quick enough to begin delivering housing in this year period. There could well be examples in that set of data where the delivery of units in the first year of the 5 is unlikely, thus delivery is reduced for that period and pushed back and this process is then compounded throughout the data set up to and beyond year 5. Statistical evidence from the Department of Communities and Local Government ("CLG") reveals that building starts are 43% down on the quarter to March 2009 compared with March 2008. It is not clear whether the recently published SHLAA has taken this into account and unless it does the data in the Table at 4.6 of the SCS cannot be relied upon, particularly given the current recessionary circumstances. In relation to the Table at Paragraph 4.6 a refinement is therefore needed to take into account this effect on phasing.

10. This problem is compounded for other units relied upon where permission has been granted but no start on site has been made; this accounts for a considerable number of sites in 2009-10 period (100 dwellings) which is (year 2 of the 5 year period). A delay in these will require more Greenfield sites to be identified in order to meet the shortfall.

11. Finally we note that the East of England Plan expresses its land supply requirement as a minimum. This strategy is not reflected in the

Core Strategy Submission Document

16919 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

Submission version of the Core Strategy policy H2.

12. In summary since neither the UCS nor the Annual Monitoring Report form a SHLAA, reservations are maintained about the degree to which sufficient housing land has been identified.

Policy H3

In the Preferred Options Core Strategy 2008 more locations were identified for housing growth in the post 2021 phase. Whilst it is our view that land south of Hockley/Hawkwell should benefit from a greater number of dwellings than the 175 currently identified (330) in order to make the strategy effective. We are concerned at the significant change in strategy between the Preferred Option Core Strategy and the Submission version, which has significantly less housing growth on green field sites. This change in strategy is so significant that we would question whether it is appropriate in the context of soundness and the consultation processes that have taken place so far.

We also have concerns as to how the Green Belt review strategy set out at Policy H3 and in the Local Development Scheme integrates with other policies in the SCS and feel that Green Belt review should be more explicit throughout the SCS. As it currently stands there is a potential conflict with national policies and limited justification for the Green belt strategy. We note that in Policy H3, which indicates the need for Green Belt land review, the advice is limited and unclear. In fact Policy H3 only pays lip service to the need for a Green Belt review and provides, at best, loose advice in this regard. It says that prior to 2021 Green Belt will be safeguarded save for the releases noted under Policy H2. Policy H3 then goes on to talk about land release for development after 2021 but no time period is set out to provide a framework for any Green Belt review in this latter period. In our view Policy H3 and Policy GB1/H2 should explain fully the need for a Green Belt review and that such a review should take place for a defined period. That such a review has not taken place in advance of the SCS is a serious matter for the Inspector to consider in the context of soundness. That said, it is considered that any review of Green Belt should have regard to a period beyond 2021 as indicated by draft Policy H3. Paragraph 1.9 of the East of England Plan explains "this RSS covers the period to 2021 but sets a vision, objectives and core strategy for the longer term". 2026 is therefore considered a minimum suitable period that any Green Belt review must have regard to in order to meet the 5 year land supply requirements in PPS3 for the period after 2021. However, Policy SS7 of the East of England Plan talks about Green Belt reviews up to 2031. In view of this and the need to explore the circumstances of Rochford - that existing settlements cannot contain future housing growth; that Green Belt is necessary to provide housing; and that these provide exceptional reasons to vary the Green Belt locally (paragraph 2.6 to 2.7 of PPG2) the policies and strategy for the SCS should identify a Green Belt review covering the period to 2031 and set out why a review is necessary. Not to do so is unsound for justification and effectiveness reasons.

Policy H4 - Affordable Housing

As currently drafted we feel that the policy is not concise enough and that the policy does not reflect current guidance. The phrase 'at least' would indicate that in most cases affordable housing above 35% will be sought. Our understanding is that the 35% figure is recommended in the SHMA and that to provide a policy framework which seeks to go beyond that figure would potentially be unworkable as many sites could not financially bare the burden of over a third of the net developable area not yielding a value. The policy should be redrafted so that "a target of 35% affordable housing shall be provided on all developments of 15 or more units..."

The last policy paragraph provides some scope to relax this policy, if there are clear site constraints that make on site provision impossible. The policy, though, is not particularly clear on what would constitute exceptional circumstances. For example, physical site constraints, which unusually raise development costs, would be one such reason and this should be specified. There may be other reasons including the nature of housing needs in the part of the District the site is located which justify affordable housing below the 35% target. Design reasons may also have a bearing on how provision is made and in what form, particularly if the site is in an historic area where design might override housing need argument. It is therefore recommended that the policy expand on the type of circumstances where affordable housing may be relaxed and the type of information that will be sought of applicant's who have a need to invoke this part of the policy.

Policy H5

In support of the policy, it is advantageous that no percentages requiring a specific mix are included. This flexibility will enable developers and the Council to respond directly to changing circumstances in the local housing market. In the past some authorities have set out a percentage for the type of housing they require only to find that after a few years of strict implementation there is an oversupply of property of that type and no flexibility in the policy to address the problem.

Policy ED2 - London Southend Airport

It is considered that to grow non aviation related employment at a location north of Southend Airport where sustainable access from the rest of Rochford District requires careful consideration. Most Airports are serviced by aviation related employment development and as such a location close to the airport is sensible and sustainable. However, for surface access reasons it would be inappropriate to encourage travel from Rochford's main settlements to what essentially

Core Strategy Submission Document

16919 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

would be a rural location for general employment uses. Whilst sustainable access would be improved by a railway station and better bus links, there is no evidence to suggest that a sustainable surface access strategy for non related employment development at the Airport can be achieved. Paragraph 11.22 explains the critical importance of a railway station to the delivery of the strategy yet the Transport Chapter and Implementation Chapter provide neither a policy nor an assessment of deliverability. It is also notable that the South Essex Rapid Transit Policy T4, as set out at paragraph 10.16, notes that Rochford is not proposed to be served but may be served in future phases. This uncertainty is no way to plan for a major employment land supply strategy in the District. In relation to PPS12, the ability to deliver sustainable green field employment sites away from the top tier settlements of Hockley/Hawkwell, Rochford and Rayleigh is unsound.

Policy ED3

We fully support the first sentence of the Policy and note the apparent contradiction with the statements in Policy H1 and elsewhere which seeks to develop on alternative uses at industrial estates such as Eldon Way.

This contradiction is evidence in the second paragraph of Policy ED3. In our representations on Policy H1 we have explained why it is not sound to diminish the employment stock at Eldon Way and the importance of maintaining a dominance of employment type uses at this estate. These arguments are not repeated here.

We note the sentiments of the third paragraph and in accordance with our representations elsewhere are of the view that this sentence should be revised to explain that Eldon Way will accommodate principally employment type uses. As noted elsewhere uses which are an alternative to employment would diminish this highly sustainable employment site and this is unsound when assessed against National Policy.

Policy ED4 - Future Employment Allocations

In part, the de-allocation strategy is not supported as it is considered unsound when set against sustainability criteria. In relation to the Eldon Way Industrial Estate it is considered critical to the ongoing sustainability of this settlement that employment uses are maintained at this location. It is close to the railway station, bus routes and local residential areas from which the opportunity exists for employees to walk or cycle to work. Its location adjacent to the Town Centre offers opportunity for some retail and leisure development to complement the centre and to maintain a supporting function. These sustainable benefits would not occur with the deallocation of Eldon Way or the significant erosion of its employment floorspace. Whilst redevelopment of the employment site to achieve new employment is supported, the dominant land use should continue to be employment use. As a consequence, the 18ha of land required for employment in this policy is considered to be excessive and the policy should be reviewed to explain that redevelopment of existing employment sites for primarily new employment development will be encouraged.

Policy T4

It is noted that the South Essex Rapid Transit policy, as elaborated upon at paragraph 10.16 notes that Rochford is not served but may be served in future phases. This uncertainty is contrary to the delivery principles of soundness and directly puts at issue the employment land supply strategy in the District which is founded on sustainable access to new sites. In relation to PPS12, the ability to deliver sustainable green field employment sites away from the top tier settlements of Hockley, Rochford and Rayleigh is unsound.

Appendix H1, CTL1 - Infrastructure

It is recognised that necessary infrastructure provision is an important part of creating a sustainable development and in that context appendix H1 is supported. The supporting text notes that the table at Appendix H1 is not exhaustive and in that context it is very important that the framework properly distinguishes between what should be provided as part of new development schemes and what shouldn't. It is therefore essential that the framework acknowledges the importance of Circular 05/05 and the tests which say that provision of infrastructure and/or contributions should be:

- * Relevant to planning
- * Necessary to make the proposed development acceptable in planning terms
- * Directly related to the proposed development
- * Fairly and reasonably related in scale and kind to the proposed development
- * Reasonable in all other respects

As is made clear (Paragraph B9 of Circular 5/05) contributions should not be used to make good existing deficiencies in infrastructure provision. Nor are they to be used to secure contributions to the achievement of wider planning objectives that are not necessary for consent to be granted. In that context the Core Strategy should set this out as its policy framework.

Policy GB1 - Green Belt

Core Strategy Submission Document

16919 Object

CHAPTER 4 Policy H2 - Extensions to residential envelopes and phasing

The objectives of this policy are supported, although as noted in other representations the SCS is unsound as it does not meet the tests in relation to justification, compliance with national policy or effectiveness of strategy.

Policy GB1 mentions the objective to allocate the minimum amount of Green Belt land necessary. The policy should link to the requirements of PPG2 and RSS which are discussed in relation to the representations on Policy H2 and H3. The policy should set out a timeframe for the review and why Rochford requires a Green Belt review (what the exceptional circumstances are in this District that justify a review of local boundaries. The policy should be amended to set out a 2031 time frame and this may require the SCS to have an extended life span beyond 2021.

We would recommend the deletion of the word character since Green Belt designation is not related to landscape character as currently drafted. For clarity we would also recommend that the Policy or its supporting text explain that a Green Belt review will take place in support of an allocations document (paragraph 6.6) in order to identify an appropriate new boundary. This is particularly necessary given the commitment to a Green belt review in the adopted Local Development Scheme.

Policy CLT1 - Planning Obligations and Standard Charges

In view of the need to test fully the basis on which standard charges are based it is important that any document produced is in a development plan document that enables an examination in public. The policy should explain this in order that when the document is produced it accords with Policy and is based on sound evidence.

ENV9 - Code for Sustainable Homes

Object. The advice from the Department of Communities and Local Government is that the new requirement to have a rating against the Code does not make it mandatory to build a Code home or to have each new home assessed against the Code. It does however mean that all buyers of new homes be given clear information about the sustainability of the new home. A house builder can do this in one of two ways:

- they can choose to build a Code home, have that home assessed against the Code and provide the home buyer with a Code certificate stating the star rating the home has achieved
- or, they can choose to build to current building regulations standards, not to pay for an assessment and instead download a nil-rated certificate of non-assessment (also referred to as a nil-rating) to provide to the home buyer.

As such the Rochford policy requirement that coding 3 be achieved by 2010 and Code 6 by 2013 is out of step with Government advice. The policy wording should explain that it is just the coding that is a requirement of new homes and not necessarily that new homes should be constructed to achieve a standard.

The current Government objectives are for the code to be introduced over a reasonable period with development to be code 3 by 2010, code level 4 by 2013 and code level 5 by 2016. In this regard the policy, as drafted, seeks to achieve code 6 by 2013 and consequently compresses the code requirements into a shorter time scale with the costs associated expected to be subsumed within the housing market through higher prices. This is not a realistic strategy for the delivery of sustainable homes and we consider that the policy should be revised to extend the period of compliance but to also make it more flexible based on local circumstances.

Research undertaken on behalf of the Housing Corporation and English Partnerships, published in February 2007 'A cost review of the code for sustainable homes' reveals that code 6 is unlikely to be unattainable given existing technologies and that achieving code 5 could result in a 12% to 20% increase in costs that would have to be passed onto the consumer. Given the variability of the housing market with peaks and troughs, it is unlikely that the housing market would be able to subsume this level of price increase.

The code system policy as currently drafted does not have regard to site circumstances and so many of the requirements could be difficult to meet. For example, micro electricity generation on site may be difficult to achieve where local circumstances deter the capture of wind or solar power. If more expensive technologies are required to generate power than is the norm then costs will rise. There may be other competing reasons why designs cannot include certain sustainability measures if housing sites are in sensitive landscape and historic locations. Alternatively there may be significant development costs associated with site specific circumstances and so viability of the site's development becomes a valid consideration. By insisting on the code for sustainable homes other policy objectives such as affordable housing at particular rates and other contributions may need to be reconsidered. Consequently, we are of the view that this policy should be drafted in a manner which enables site specific circumstances to be taken into account. As noted above the Government explains that the code is a certification requirement and does not necessarily mean that buildings are constructed in accordance with a code level.

It is also important to note that it is not the purpose of planning legislation to duplicate other legislation. In this regard, the policy should accept that the Building Regulations will be the main vehicle for implementing this policy and that unless the coding requires external development then there will be no need to specify what is to be carried out in a planning application.

6 Thorpe Road
Hawkwell
Hockley
Essex
SS5 4EP

Full Text: Dear Councillor Hudson

As a local resident for many years, I strongly object to any development in the area. The land you have outlined for building is green belt, maintaining a rural community and one of the reasons I moved to the area in the first place. Should I have wanted to live in a more densely populated conurbation I would have moved else where.

Over the years the amount of residents that use Thorpe Road has more than doubled; Thorpe Close, Thorpe Gardens and Spencers were new developments that have all been approved, thus making Thorpe Road more than twice as busy as originally intended. For this very reason, I strongly object to any access via Thorpe Road yet again. The amount of traffic will affect my quality of life - changing what is currently a peaceful cul-de-sac in to a busy development.

For the reasons above, I believe that any decision to allow housing on green belt is unsound and would result in the destruction of woodland and existing wildlife. I request you have consideration for existing residents and do not allow further development of Thorpe Road.

CHAPTER 4 Extension to residential envelopes post-2021, 4.24

Respondent: Mrs Jane McClure [7840]

230 Hockley Road
Rayleigh
Essex
SS6 8EU
01268771971

Agent: N/A

Full Text: I have lived in Rayleigh for over forty years and in that time, Rayleigh has morphed from a small pleasant market town into a developers free for all in building. This has resulted in loss of green space, loss of schools (knocking down Park School to build more houses - surely more schools not less??), traffic jams, lack of school space, overcrowded trains, doctors and dentists.

Why is it that Rayleigh gets all the housing whereas Rochford, Ashington and the outlying areas appear to stay green and pleasant areas??

Ironically, Rochford is a much smaller town than Rayleigh but manages to keep all the amenities around Rochford to the detriment of Rayleigh. Rochford Town Centre remains quaint with most of the old buildings renovated whereas Rayleigh's quaintness has been obliterated by the same Council...

Summary: Over-development of housing in Rayleigh resulting in loss of farmland, green spaces and pressure on existing NHS, educational resources and traffic on roads.

Change to Plan Look at other areas within the Rochford area as Rayleigh no longer has the capacity to ease Rochford Council's problem with housing - Ashington and Canewdon have plenty of farmland that could be utilised instead.

Full Text:

To ensure that an adequate five year supply, a flexible approach needs to be adopted with regards the timing and release of land for residential development. In light of the current economic climate sites that are identified for the period up to 2021, may not come forward for a variety of reasons and need to be augmented by site(s) identified in period post 2021 in order to maintain the 15 year supply. The sites for the period post 2021 should also be delineated in the Allocations Development Plan Document.

The objective of the Local Development Framework is not just about allocating sufficient land to provide new homes but is about ensuring that, subject to the prevailing market conditions, allocations will actually deliver the required amount of housing over the plan period. This relies largely on allocating sites where there is a real prospect (available, suitable and achievable), of delivery within the anticipated timescale. It also requires a mechanism to ensure that sufficient sites are brought forward at the right time to enable delivery.

This approach is consistent with the guidance contained within Planning Policy Statement 3 (PPS3) which advocates local planning authorities maintain a flexible and responsive supply of housing land that reflects the 'Plan, Monitor, Manage' approach. This supports the need for a clear policy approach that indicates the timing of potential housing sites in relation to the housing trajectory and the 5 year supply of land. In addition, to the 5 year supply of deliverable land, PPS3 also requires a further supply of specific, developable sites for years 6-10 and where possible, years 11-15. Sufficient sites will therefore be allocated up to 2026 to meet the 15 year requirement in PPS3. In the event that the market does not deliver sufficient homes to meet requirements, sites will need to be brought forward from future year's allocations to ensure housing delivery targets are met.

As we are currently in a period of recession it is not unreasonable that some of the sites allocated in the early years of the 15 year supply may not come forward as for a combination of reasons the sites may no longer be deliverable (eg no longer available and/or achievable). In addition, it is necessary to provide private housing in order to ensure that the associated/linked affordable housing is also provided.

Therefore, in order to ensure that a continuous 5 year supply is maintained it may be necessary for sites identified in future years to be brought forward and to ensure this happens these sites should also be specifically delineated on the Proposals Map, which accompanies the Allocations Development Plan Document.

Paragraph 4.24 - amend as follows:

In considering the general development locations for post-2021 development, the same issues as for Policy H2 above have been considered. These sites have been assessed for their ability to be delivered early to compensate for any shortfall in the pre-2021 site. The assessment will include a review of available infrastructure and the impact on existing communities to ensure that their early delivery would be appropriate.

Summary:

To ensure that an adequate five year supply, a flexible approach needs to be adopted with regards the timing and release of land for residential development. In light of the current economic climate sites that are identified for the period up to 2021, may not come forward for a variety of reasons and need to be augmented by site(s) identified in period post 2021 in order to maintain the 15 year supply. The sites for the period post 2021 should also be delineated in the Allocations Development Plan Document.

The objective of the Local Development Framework is not just about allocating sufficient land to provide new homes but is about ensuring that, subject to the prevailing market conditions, allocations will actually deliver the required amount of housing over the plan period. This relies largely on allocating sites where there is a real prospect (available, suitable and achievable), of delivery within the anticipated timescale. It also requires a mechanism to ensure that sufficient sites are brought forward at the right time to enable delivery.

This approach is consistent with the guidance contained within Planning Policy Statement 3 (PPS3) which advocates local planning authorities maintain a flexible and responsive supply of housing land that reflects the 'Plan, Monitor, Manage' approach. This supports the need for a clear policy approach that indicates the timing of potential housing sites in relation to the housing trajectory and the 5 year supply of land. In addition, to the 5 year supply of deliverable land, PPS3 also requires a further supply of specific, developable sites for years 6-10 and where possible, years 11-15. Sufficient sites will therefore be allocated up to 2026 to meet the 15 year requirement in PPS3. In the event that the market does not deliver sufficient homes to meet requirements, sites will need to be brought forward from future year's allocations to ensure housing delivery targets are met.

Full Text: ROCHFORD DISTRICT COUNCIL - LOCAL DEVELOPMENT FRAMEWORK CORE STRATEGY SUBMISSION
SEPTEMBER 2009

Icen Projects Ltd (Icen) has been instructed by Colonnade Land LLP (Colonnade) to submit representations to the Rochford Local Development Framework Core Strategy Submission (CSS).

a) Overview

It is our conclusion that the CSS is not justified, effective or consistent with national policy, as required by Planning Policy Statement 12: Creating Strong Safe and Prosperous Communities through Local Spatial Planning (PPS12) and is therefore vulnerable to being found unsound by an Inspector through the Examination in Public.

b) Background and Summary

These representations follow those made by Icen on behalf of Colonnade to the Preferred Options Core Strategy, submitted via letter dated 17 December 2008. In this regard, we would request that the Council confirms that the representations made to the Preferred Options Core Strategy will be taken into account alongside the current representations, particularly as there are a number of cross references between the two sets of representations.

It is not considered necessary to reiterate the content of the previous representations, as they were made at the appropriate stage and will be considered by the Planning Inspectorate in due course, but it is inevitable that certain elements will require restating where it is not clear that they have been taken into account in the production of the CSS. For clarity, therefore, Colonnade feel that it is appropriate to clarify the 'in-principle' issues that were raised in the representations to the Preferred Options Core Strategy, recognising that these issues were raised in the context of a wider and more coherent justification made within the representations:

- â€¢ Further cross-referencing of the recommendations made within the evidence base is required;
- â€¢ Greater focus should be placed on promoting Rochford as the principal settlement within the District;
- â€¢ Coombes Farm is the most logical location for residential development abutting the urban area of Rochford and as such warrants recognition as a general location for residential development;
- â€¢ The allocation of Three Ashes Farm for employment generating uses will be pursued;
- â€¢ Recognition that it is not realistic to expect residential allocations to be met mainly on Brownfield sites, nor should the intensification of smaller sites in residential areas be pursued;
- â€¢ Many of the sites identified as suitable for residential development will not be viable and will not come forward for development within the timescales anticipated;
- â€¢ The failure to provide the necessary justification for the proposed infrastructure improvements sought in Appendix H1;
- â€¢ The inclusion of an affordable housing exception policy was sought; and
- â€¢ The need to identify sites capable of delivering employment growth in the short term.

Following assessment of the CSS presented by the Council for consultation prior to submission to the Secretary of State, Colonnade considers the Plan to be 'unsound' as the document consistently fails to meet the tests of soundness set out in the table following Paragraph 4.52 of PPS12. For clarity, PPS12 confirms that to be 'sound' a Core Strategy should be JUSTIFIED, EFFECTIVE and consistent with NATIONAL POLICY and defines 'justified' as "founded on a robust and credible evidence base" and "the most appropriate strategy when considered against the reasonable alternatives" and 'effective' as "deliverable", "flexible" and "able to be monitored".

The rationale for the above is identified in the remainder of these representations, which are provided in the interests of ensuring the Council delivers a strong, robust and logical Core Strategy that guides the future development of the District in a justified and effective manner.

b) Colonnade

As the Council is aware from previous submissions to the Local Development Framework, Colonnade is a strategic land company with a particular interest in the future development of the District as a consequence of a number of sites that it controls, particularly around Rochford.

The Council will also be aware that Colonnade has recently submitted an outline planning application for the residential development of the land at Coombes Farm, Rochford to provide a sustainable urban extension comprising up to 326

16250 Object

CHAPTER 4 Extension to residential envelopes post-2021, 4.28

residential dwellings, with associated accesses and community uses. Whilst the planning application process is clearly separate from the Local Development Framework production process, Colonnade wishes to continue the promotion of the site as a suitable location for residential development.

Accordingly, these representations focus on the legal requirements and tests of soundness associated principally with the Housing and Employment chapters of the CSS, with reference where appropriate to the sites that are controlled by Colonnade, the outline planning application at Coombes Farm and other issues where relevant.

c) Housing

i. Date of Adoption

The CSS assumes an adoption date of 2010 and plans for the provision of housing to 2025.

Taking account of the potential delays to the adoption of the Plan, including the Examination process, it would be more appropriate for the CSS to provide sufficient flexibility to allow for delays in its adoption. Colonnade considers an adoption date of 2011 for the CSS is a more realistic target.

Taking account of the advice in Paragraph 4.13 of PPS12, which states that the time horizon for the Core Strategy should be "at least 15 years from the date of adoption" it would be appropriate for the CSS to plan for the provision of housing to 2026 at the earliest. As such, Colonnade does not consider the CSS to be 'flexible' in the context of the tests of soundness in the table following Paragraph 4.52 of PPS12.

ii. Housing Delivery

However, setting the above aside, the Housing Chapter identifies the minimum housing delivery target for the period 2001 to 2021 of 4,600 dwellings as set out in the East of England Plan, with the annual average requirement of 250 dwellings per annum to extend provision from 2021 to 2025. It also confirms that the residual target for the period 2006 to 2021 is 3,790 dwellings, taking account of the delivery of 810 dwellings in the period 2001 to 2006, and a further 618 dwellings have been completed between 2006 and 2008.

This leaves a residual housing provision target of a minimum of 3,172 dwellings in the period 2008 to 2021. Taking into account the required provision beyond 2021, the residual housing provision target in the period 2008 to 2025 is a minimum of 4,172 dwellings. The disparity between these figures and those provided within the CSS are explained by the rounding down of the annual average delivery requirement in the period 2006 to 2021 to 250 dwellings per annum, compared with the actual figure of 252.67.

The table at Paragraph 4.6 of the CSS identifies the source of housing provision that will meet the identified minimum requirements and includes figures for 'Extant Planning Permissions' and 'Existing allocations/other appropriate sites identified in Strategic Housing Land Availability Assessment'. These figures, along with the actual completions within the period are combined to produce the figure for the 'Total without Green Belt release' figure.

Setting aside the concern regarding under-provision associated with the rounding down of the annual average delivery requirement in the period 2006 to 2021, the CSS fails to identify the sites that will contribute to the 'Extant Planning Permissions' provision. The identification of the sites that will contribute to the 'Extant Planning Permissions' should be provided in the context of the findings of the Inspector in the appeal by Asprey Homes [APP/G5180/A/07/2043219/NWF] who determined that the reliance on a delivery rate of 100% is unsafe [IR287].

Furthermore, at the time of writing these representations, the Strategic Housing Land Availability Assessment 2009 has not been published. It is impossible therefore for a full assessment of the proposed housing provision to be undertaken to confirm whether the CSS is 'founded on a robust and credible evidence base' [test of soundness in the table following Paragraph 4.52 of PPS12].

iii. Redevelopment of Employment Sites

Paragraph 4.14 of the CSS refers to the identification of the four employment sites that are considered by the Council to be suitable for redevelopment to residential use. However, the failure to publish the Strategic Housing Land Availability Assessment 2009 either before or alongside the publication of the CSS means that the assumptions made by the Council as to the suitability, availability, viability and deliverability of the sites cannot be assessed.

It has been necessary, therefore, to review the assumptions made in the Rochford Urban Capacity Study 2007 (UCS) regarding the sites. Within the section of the UCS entitled 'Redevelopment of Established Employment Land' [pages 22 & 23] includes a list of those sites assessed, their indicative capacities and the probability of residential development coming forward at the sites within the plan period (identified elsewhere as 2001 - 2021). The list includes the four sites identified in the CSS of Eldon Way/Foundry Estate, Hockley; Rawreth Lane Industrial Estate, Rayleigh; Stambridge Mills; and Star Lane Industrial Estate, Great Wakering.

In total, the UCS identifies an indicative residential redevelopment capacity of 486 units on the four sites (118, 220, 60 and 88 respectively). Of these, it identifies the Rawreth Lane Industrial Estate and Stambridge Mills as having a 'high'

Core Strategy Submission Document

16250 Object

CHAPTER 4 Extension to residential envelopes post-2021, 4.28

probability of coming forward for development in the Plan period (2001 - 2021), which would deliver 280 residential dwellings using the Council's own figures. The Star Lane Industrial Estate (referred to in the UCS as the Star Lane Brickworks) is identified as having a 'medium' probability of coming forward for development in the Plan period, with capacity to deliver 88 residential dwellings. It is unclear, therefore, where the figure for 'Existing allocations/other appropriate sites identified in Strategic Housing Land Availability Assessment'.

Set against this is the identification of these four sites in the CSS as being capable of delivery for residential development within the Plan period, with 671 units delivered between 2006 and 2015 and a further 506 units between 2015 and 2021.

The UCS also states in the same section that:

"There are considerable areas of land in the district that are currently allocated for, and in use as, employment land. The redevelopment of such sites for residential use would reduce demand for residential development on greenfield sites, but would at the same time create a need for alternative sites to be found for employment. Such an approach, which would be likely to require the decontamination of existing employment land to make it fit for residential use, together with development of a greenfield site and implementation of additional infrastructure to serve the new employment area, may well be unsustainable." [our emphasis]

The UCS appears to confirm therefore, that not only would the redevelopment of the four sites listed in the CSS be unlikely within the Plan period, but also potentially unsustainable. In this regard, it is notable that the promoters of Stambridge Mills sought the Screening Opinion of the Council as to whether Environmental Impact Assessment of the planning application for the redevelopment of the site for residential use was required in 2007, but to date are yet to submit a planning application for the redevelopment of the site.

In light of this, Colonnade does not consider the CSS is 'the most appropriate strategy when considered against the reasonable alternatives' [test of soundness in the table following Paragraph 4.52 of PPS12], which include the provision of residential development in East Rochford.

iv. Strategic Housing Growth to the East of Rochford

Furthermore, whilst paragraph 2.62 of the CSS identifies concern relating to the identification of locations to the east of Rochford for development on the basis that 'vehicular movements would inevitably be directed through Rochford's historic core', the CSS later identifies Stambridge Mills as a suitable site for residential redevelopment.

In light of the evident conflicts between the evidence base provided in support of the CSS and the absence of other evidence, the CSS is not considered 'sound' in the context of the tests of soundness in the table following Paragraph 4.52 of PPS12.

v. Housing Trajectory

Paragraph 4.28 of the CSS confirms that policies H1, H2 and H3 of the CSS will deliver housing supply as illustrated in the Housing Trajectory at Appendix H2. This Housing Trajectory is transposed from the 2008 Annual Monitoring Report (AMR).

Whilst on the face of it, the Housing Trajectory appears to confirm that the Council can meet its requirement to identify a five year housing supply, many of the sites identified within the AMR do not conform to the guidance issued by CLG in August 2008, on the assessment of a five year land supply. The guidance identifies sites that can be included within the five year assessment of housing supply as:

"those that are allocated for housing in the Development Plan, sites that have planning permission (outline or full planning permission that has not been implemented) and specific, unallocated brownfield sites that have the potential to make a significant contribution to housing delivery during the 5 year period".

Table 4.10: Projected Net Completions of the AMR confirms that the five year housing land supply figure includes sites from 'other land allocated for residential purposes', which are based on land allocations outside existing settlements. However, it should be clarified that these land allocations are not currently allocated for housing development in an adopted Development Plan. As such, these unallocated greenfield sites that are yet to make significant progress through the planning system should be discounted and the five year housing land supply recalculated.

The table below has been prepared to confirm the extent of the shortfall should the sites from 'other land allocated for residential purposes' be removed from the calculation of the Rochford five year housing land supply, in accordance with the guidance issued by CLG:

Recalculated Five Year Housing Land Supply (2009 - 2014):

Year
1st April 2009 to 31st March 2010
Predicted Delivery (A)

Core Strategy Submission Document

16250 Object

CHAPTER 4 Extension to residential envelopes post-2021, 4.28

106 dwellings
Allocations on 'other land allocated for residential purposes' (B)
0
Residual delivery (A-B)
106 dwellings
Delivery Shortfall
0

Year
1st April 2010 to 31st March 2011
Predicted Delivery (A)
217 dwellings
Allocations on 'other land allocated for residential purposes' (B)
150
Residual delivery (A-B)
67 dwellings
Delivery Shortfall
150

Year
1st April 2011 to 31st March 2012
Predicted Delivery (A)
544 dwellings
Allocations on 'other land allocated for residential purposes' (B)
300
Residual delivery (A-B)
244 dwellings
Delivery Shortfall
300

Year
1st April 2012 to 31st March 2013
Predicted Delivery (A)
395 dwellings
Allocations on 'other land allocated for residential purposes' (B)
375
Residual delivery (A-B)
20 dwellings
Delivery Shortfall
375

Year
1st April 2013 to 31st March 2014
Predicted Delivery (A)
300 dwellings
Allocations on 'other land allocated for residential purposes' (B)
300
Residual delivery (A-B)
0 dwellings
Delivery Shortfall
300

TOTAL

Predicted Delivery (A)
1,562 dwellings

Allocations on 'other land allocated for residential purposes' (B)
1,125 dwellings

Residual delivery (A-B)
437 dwellings

Delivery Shortfall
1,125 dwellings

The above table confirms that the removal of the 'other land allocated for residential purposes' from the calculation of the Rochford five year housing land supply leaves the Council with a minimum net additional housing delivery of 437 dwellings, which equates to a supply of 1.7 years based on the adjusted annual delivery target of a minimum of 255 net

Core Strategy Submission Document

O - 16250 - 9177 - Extension to residential envelopes post-2021, 4.28 - i

16250 Object

CHAPTER 4 Extension to residential envelopes post-2021, 4.28

additional dwellings per annum. As such, the Council is failing to meet its requirement to demonstrate a five year housing land supply in accordance with PPS3 and the supporting guidance provided by CLG. It is notable that the recent application by David Wilson Homes at Land between Main Road and Rectory Road and Clements Hall Way, Hawkwell identifies an even greater shortfall in the Council's five year housing land supply.

In addition to the above, the AMR does not include a commentary on how deliverability has been assessed against the requirements of paragraph 54 of PPS3.

Furthermore, the guidance from CLG confirms that the windfall sites cannot be relied upon in demonstrating a five year supply unless a Local Planning Authority can demonstrate genuine local circumstances exist to allow this exception. However, the second paragraph of the section entitled 'Housing Trajectory and Five Year Housing Supply' confirms that the estimated completions in the years 2008 to 2013 includes estimated yields through 'intensification' coming forward in future years. With reference to the definition of 'intensification' on page 13 of the AMR, it appears that the 'Housing Trajectory and Five Year Housing Supply' also includes provision for windfall sites. As such, the Council is required to demonstrate the 'genuine local circumstances exist to allow this exception'.

The pressures on delivery and need for additional sites are more acute when it is considered that an average delivery rate of 204 dwellings per annum was achieved during a strong period of housing market growth. In view of the current economic downturn, and significant problems faced within the housing market, the Council should seek to identify appropriate and deliverable sites to meet its regional housing target provision commitments. Suitable sites would include Coombes Farm, which has been positively promoted for development through the LDF process.

It may, therefore, be more appropriate for the Council not merely to allocate sufficient sites to meet the minimum targets set down by the East of England Plan, but to identify a reservoir of land capable of coming forward for development should the sites identified through the CSS and Allocations Development Plan Documents (DPD) fail to come forward for development within the anticipated timescales.

vi. Appendix H1

As set out in the representations to the Preferred Options Core Strategy, there is continuing concern that the list of improvements to infrastructure required in support of residential development as set out in Appendix H1 fails to provide the necessary justification for its inclusion. Whilst the preamble seeks to clarify why the infrastructure is sought, the inclusion of this list should be fully justified, otherwise it is of little value. Furthermore, it would be of benefit to provide further details of the existing community infrastructure provision and capacity within the evidence base.

The failure to provide the necessary justification for its inclusion means that the CSS will not be 'founded on a robust and credible evidence base' [test of soundness in the table following Paragraph 4.52 of PPS12].

d) Character of Place

As set out in the representations to the Preferred Options Core Strategy, Colonnade considers that, with respect to the requirement to produce and adhere to Development Briefs for large residential developments, as set out in Policy CP1, the Council should not seek to impose further demands on developers where existing regulations provide sufficient requirements regarding design. In this instance, Design and Access Statements provide sufficient design guidelines for developments and there is no additional information provided in the policy or supporting text that clearly sets out the justification for this requirement.

e) Green Belt

□

With reference to the comments regarding the redevelopment of employment sites under the 'Housing' section above and the requirement to allocate sufficient land to meet the minimum housing provision targets as required by the East of England Plan, Colonnade considers that the chapter on Green Belt, and policy GB1 in particular, fails to provide the necessary evidence base that will allow it to be monitored effectively.

It is inherent that the proposed redevelopment of previously developed employment sites for residential use in order to reduce the requirement to allocate previously undeveloped land for residential use will displace these employment uses. In turn, therefore, the separate allocation of previously undeveloped Green Belt to accommodate the compensatory employment provision is required. This is accepted in principle at paragraph 11.11 of the CSS.

Without providing clarification of the anticipated quantum of land required to accommodate the provision of housing and compensatory and new employment land, it is not possible to monitor the performance of policy GB1.

However, using the Council's figures in the table setting out the breakdown of the housing provision figures in Chapter 4 of the CSS (assuming that actual completions and extant permissions are all on previously developed land), setting aside the displacement of employment uses referred to above, approximately 42% of the required minimum housing provision target is capable of being accommodated on previously developed land (2,005 units from a total of 4,750). As such, the Council is required to provide at least 58% of the required minimum housing provision target on the Green Belt (2,745 units from a total of 4,750).

16250 Object

CHAPTER 4 Extension to residential envelopes post-2021, 4.28

If these figures are adjusted to take account of the displacement of employment uses (assuming the provision of an equal quantity of land is required to compensate for the employment land that is redeveloped), this figure changes to 17.5% on previously developed land and 82.5% on Green Belt (828 and 3,922 units from a total of 4,750 respectively). Even allowing for the achievement of higher densities of employment on new developments, the figures above are unlikely to change significantly.

Furthermore, the table in Chapter 4 also confirms that no previously developed land will be available for development beyond 2021, or 2015 if account is taken of the displacement of the employment uses.

In light of this, not only does Chapter 6 fail to provide the necessary evidence base that will allow it to be monitored effectively, it is also necessary to consider whether it presents the most appropriate strategy for addressing the required release of Green Belt land to accommodate the defined housing and employment delivery targets to 2025 and beyond as necessary. Colonnade considers a more robust approach that is flexible and capable of being monitored, would be to clearly identify those sites capable of delivery in the short term, which for the avoidance of doubt includes those sites being promoted by Colonnade, with a reservoir of alternative sites set aside for future growth.

As set out in the representations to the Preferred Options Core Strategy, Colonnade considers that the inclusion of an affordable housing exception policy within the CSS will aid the delivery of community housing within rural areas. However, the CSS does not contain such a policy, or adequately address the issue of community housing within rural areas and the CSS is not considered to provide sufficient flexibility to allow for the delivery of essential rural housing.

f) Environmental Issues

Colonnade has concerns regarding the justification for and effectiveness of a number of the policies contained within the Environmental Issues chapter, as follows:

â€¢ Policy ENV1: The Council fails to identify how it will "maintain, restore and enhance" the sites of nature conservation importance that are identified, or how the performance of this policy will be monitored;

â€¢ Policy ENV3: In the context of the advice at paragraph 4.32 of PPS12 regarding the reformulation of national policies, Colonnade does not consider that this policy is required; and

â€¢ Policy ENV9: As set out in the representations to the Preferred Options Core Strategy, Colonnade does not consider that the necessary evidence base has been provided to justify a policy that seeks to go above and beyond the policy targets for the Code for Sustainable Homes as set out by Central Government.

g) Community Infrastructure, Leisure and Tourism

Policy CLT1 refers to the requirement for residential and employment development to contribute to the infrastructure identified in Appendix CLT1 through Standard Charges.

However, whilst the general principle of securing planning obligations through the application of standard charges is broadly accepted, the list of infrastructure requirements set out in Appendix CLT1 is not supported by sufficient evidence base to identify its robustness and credibility. As such, Colonnade does not consider either policy CLT1 or Appendix CLT1 is justified in the context of PPS12.

It is also noted that, despite the clarification sought by Colonnade at the Core Strategy Preferred Options stage, the CSS fails to confirm what information should be contained within Health Impact Assessments, which are required by policy CLT4. Once again, Colonnade requests further clarification of what is involved in the assessment and the expected outputs, which will provide greater clarity and will allow the policy to be monitored.

h) Transport

Policy T8 confirms that the Council will apply minimum parking standards. As set out in the representations to the Preferred Options Core Strategy, the guidance in Planning Policy Guidance Note 13: Transport (PPG13) is clear regarding the imposition of parking standards.

Paragraphs 52-56 of PPG13 confirm that the Local Planning Authorities should apply maximum not minimum parking standards. In order to satisfy the legal requirements set out in PPS12, the policy must reflect PPG13 to promote sustainable transport choices and further provide incentives for developers to locate further residential land closer to local service centres by requiring maximum parking standards for residential developments.

i) Economic Development

As set out in the representations to the Preferred Options Core Strategy, the land at Three Ashes Farm provides an excellent opportunity to deliver employment growth in the short term and may be a suitable site for the 'Eco-Innovation Centre' that is being promoted by the Council. Its identification as a suitable location for strategic employment growth, or the provision of an Eco-Innovation Centre, would accord with the general principles of the policies contained within Chapter 11.

Core Strategy Submission Document

16250 Object

CHAPTER 4 Extension to residential envelopes post-2021, 4.28

The identification of Purdeys Industrial Estate as fit for purpose (in paragraph 11.32 and the Council's 2008 Employment Land Study 2008) and therefore it should be maintained and if possible expanded, is welcomed and Colonnade considers that Three Ashes Farm could deliver this expansion, providing a natural extension to Purdeys Industrial Estate and being strategically located close to the Airport.

Three Ashes would address the negative impacts that the nearby residential area experiences from the existing Industrial Estate by providing a buffer between established uses and the residential area with less intensive employment activities. The highways analysis that has been carried out has suggested that it would not have an adverse impact on roads and congestion. Furthermore, there are very few opportunities for businesses to expand and Three Ashes could provide this opportunity.

j) Conclusions

Following the submission of representations to the Preferred Options Core Strategy, Colonnade is disappointed to note that the CSS fails to take account of the majority of the issues raised in their representations.

In addition, Colonnade considers the plan to be 'unsound' as the document consistently fails to meet the tests of soundness set out in the table following Paragraph 4.52 of PPS12 and respectfully requests that the Council notifies Icen, on behalf of Colonnade, of the future arrangements for the Examination of the Core Strategy. Furthermore, Colonnade wishes to take this opportunity to formally register a request to appear at all stages of the Examination in Public, including the pre-hearing meeting and any planned hearing sessions whereby issues raised in the context of this letter are to be discussed. Please confirm this request, and that the representations made to the Preferred Options Core Strategy will be taken into account alongside the current representations, by way of return to this letter.

Icen Projects, on behalf of Colonnade Land LLP trusts that the Council will find these representations to be constructive and helpful in taking forward the Core Strategy. Should you wish to discuss any aspect of these representations further, please do not hesitate to contact us.

Summary:

v. Housing Trajectory

Paragraph 4.28 of the CSS confirms that policies H1, H2 and H3 of the CSS will deliver housing supply as illustrated in the Housing Trajectory at Appendix H2. This Housing Trajectory is transposed from the 2008 Annual Monitoring Report (AMR).

Whilst on the face of it, the Housing Trajectory appears to confirm that the Council can meet its requirement to identify a five year housing supply, many of the sites identified within the AMR do not conform to the guidance issued by CLG in August 2008, on the assessment of a five year land supply. The guidance identifies sites that can be included within the five year assessment of housing supply as:

"those that are allocated for housing in the Development Plan, sites that have planning permission (outline or full planning permission that has not been implemented) and specific, unallocated brownfield sites that have the potential to make a significant contribution to housing delivery during the 5 year period".

Table 4.10: Projected Net Completions of the AMR confirms that the five year housing land supply figure includes sites from 'other land allocated for residential purposes', which are based on land allocations outside existing settlements. However, it should be clarified that these land allocations are not currently allocated for housing development in an adopted Development Plan. As such, these unallocated greenfield sites that are yet to make significant progress through the planning system should be discounted and the five year housing land supply recalculated.

The table below has been prepared to confirm the extent of the shortfall should the sites from 'other land allocated for residential purposes' be removed from the calculation of the Rochford five year housing land supply, in accordance with the guidance issued by CLG:

Recalculated Five Year Housing Land Supply (2009 - 2014):

Year
1st April 2009 to 31st March 2010
Predicted Delivery (A)
106 dwellings
Allocations on 'other land allocated for residential purposes' (B)
0
Residual delivery (A-B)
106 dwellings
Delivery Shortfall
0

Year
1st April 2010 to 31st March 2011
Predicted Delivery (A)

Core Strategy Submission Document

16250 Object

CHAPTER 4 Extension to residential envelopes post-2021, 4.28

217 dwellings
Allocations on 'other land allocated for residential purposes' (B)
150
Residual delivery (A-B)
67 dwellings
Delivery Shortfall
150

Year
1st April 2011 to 31st March 2012
Predicted Delivery (A)
544 dwellings
Allocations on 'other land allocated for residential purposes' (B)
300
Residual delivery (A-B)
244 dwellings
Delivery Shortfall
300

Year
1st April 2012 to 31st March 2013
Predicted Delivery (A)
395 dwellings
Allocations on 'other land allocated for residential purposes' (B)
375
Residual delivery (A-B)
20 dwellings
Delivery Shortfall
375

Year
1st April 2013 to 31st March 2014
Predicted Delivery (A)
300 dwellings
Allocations on 'other land allocated for residential purposes' (B)
300
Residual delivery (A-B)
0 dwellings
Delivery Shortfall
300

TOTAL

Predicted Delivery (A)
1,562 dwellings

Allocations on 'other land allocated for residential purposes' (B)
1,125 dwellings

Residual delivery (A-B)
437 dwellings

Delivery Shortfall
1,125 dwellings

The above table confirms that the removal of the 'other land allocated for residential purposes' from the calculation of the Rochford five year housing land supply leaves the Council with a minimum net additional housing delivery of 437 dwellings, which equates to a supply of 1.7 years based on the adjusted annual delivery target of a minimum of 255 net additional dwellings per annum. As such, the Council is failing to meet its requirement to demonstrate a five year housing land supply in accordance with PPS3 and the supporting guidance provided by CLG. It is notable that the recent application by David Wilson Homes at Land between Main Road and Rectory Road and Clements Hall Way, Hawkwell identifies an even greater shortfall in the Council's five year housing land supply.

In addition to the above, the AMR does not include a commentary on how deliverability has been assessed against the requirements of paragraph 54 of PPS3.

Furthermore, the guidance from CLG confirms that the windfall sites cannot be relied upon in demonstrating a five year supply unless a Local Planning Authority can demonstrate genuine local circumstances exist to allow this exception. However, the second paragraph of the section entitled 'Housing Trajectory and Five Year Housing Supply' confirms that

Core Strategy Submission Document

O - 16250 - 9177 - Extension to residential envelopes post-2021, 4.28 - i

16250 Object

CHAPTER 4 Extension to residential envelopes post-2021, 4.28

the estimated completions in the years 2008 to 2013 includes estimated yields through 'intensification' coming forward in future years. With reference to the definition of 'intensification' on page 13 of the AMR, it appears that the 'Housing Trajectory and Five Year Housing Supply' also includes provision for windfall sites. As such, the Council is required to demonstrate the 'genuine local circumstances exist to allow this exception'.

The pressures on delivery and need for additional sites are more acute when it is considered that an average delivery rate of 204 dwellings per annum was achieved during a strong period of housing market growth. In view of the current economic downturn, and significant problems faced within the housing market, the Council should seek to identify appropriate and deliverable sites to meet its regional housing target provision commitments. Suitable sites would include Coombes Farm, which has been positively promoted for development through the LDF process.

It may, therefore, be more appropriate for the Council not merely to allocate sufficient sites to meet the minimum targets set down by the East of England Plan, but to identify a reservoir of land capable of coming forward for development should the sites identified through the CSS and Allocations Development Plan Documents (DPD) fail to come forward for development within the anticipated timescales.

Full Text: Whilst the recognition to release green belt land is supported, the proposals to release significant quantities of development in second and third tier settlements below more sustainable settlements like Hockley are unsound. Furthermore the approach is contrary to the RSS policy framework and the provisions of sustainable locations for housing growth espoused in PPS1 and PPS3. The Council's own evidence and lack of strategic evidence on infrastructure and impact on European Habitats further undermines the effectiveness of Policy H3 as drafted to be the most sustainable option.

Summary: Whilst the recognition to release green belt land is supported, the proposals to release significant quantities of development in second and third tier settlements below more sustainable settlements like Hockley are unsound. Furthermore the approach is contrary to the RSS policy framework and the provisions of sustainable locations for housing growth espoused in PPS1 and PPS3. The Council's own evidence and lack of strategic evidence on infrastructure and impact on European Habitats further undermines the effectiveness of Policy H3 as drafted to be the most sustainable option.

Change to Plan The Council's evidence indicates that the release of land at east Ashingdon, south-west Hullbridge and Great Wakering have higher infrastructure costs. The inclusion of growth at Canewdon (a third tier settlement) is wholly unsustainable. Without access to the final SHLAA and viability assessments it is difficult to comment on the deliverability of these options. All locations have limited public transport and fewer services and facilities compared to Hockley and as such the approach is unsound. Policy H2 should be re-drafted to increase the allocation for Hockley at the expense of less sustainable tier two settlements. As currently drafted the LDF directs 59 % of green belt release housing development to top tier settlements and 41 % to second and third tier settlements. There is scant evidence to support the approach in Policy H2 other than the Council's Sustainability Appraisal Report which says it wants to support the rural communities and that greater growth in the towns will harm their character. The absence of a detailed Infrastructure Study and more critically a Habitats Regulation Assessment (given the proximity of growth locations to the Crouch Estuary SPA) at this late stage of the plan preparation process creates considerable uncertainty that the strategy as presented is deliverable and sufficiently flexible to meet the Vision and objectives. This can be resolved by removing or reducing the allocations from second and third tier settlements and re-directing that growth to sustainable locations such as Hockley. A significant advantage of Hockley is that is less proximate to European Habitats than locations such as Canewdon and Great Wakering.

It is considered that the Core Strategy should identify land at Hullbridge as a growth location and not specifically land South-West of Hullbridge.

Change to Plan The Core Strategy should identify Hullbridge as a growth location and not specifically refer to 'land South-West of Hullbridge'. This is too site specific at this stage. It should be for the Site Allocations DPD to allocate land in particular locations based on the broad spatial strategy of the Core Strategy.

Full Text: The Core Strategy is unsound because Draft Policy H3 is neither justified nor consistent with National Policy.

Whilst our clients, Stolkin and Clements (Southend) LLP, agree that it is sound to designate green belt land for residential development, in order to have a 15 year housing land supply; the areas designated in Policies H2 and H3 are not the most appropriate areas and land at Tithe Park, should be designated within Draft Policy H2/H3 for c. 390 dwellings.

We have previously submitted a masterplan for Tithe Park during the preferred options consultation and this masterplan is provided again for information.

Consistency with National Policy

Draft Policy H3 is unsound because it is not consistent with the following National Policy:-

PPS1 provides the overarching Government planning advice for the delivery of sustainable development through the planning system.

Paragraph 13 sets out the key principles, which include:

(iii) "Development plans should ensure that sustainable development is pursued in an integrated manner, in line with the principles for sustainable development set out in the UK strategy. Regional planning bodies and local planning authorities should ensure that development plans promote outcomes in which environmental, economic and social objectives are achieved together over time.

(iv) Regional planning bodies and local planning authorities should ensure that development plans contribute to global sustainability by addressing the causes and potential impacts of climate change - through policies which reduce energy use, reduce emissions (for example, by encouraging patterns of development which reduce the need to travel by private car, or reduce the impact of moving freight), promote the development of renewable energy resources, and take climate change impacts into account in the location and design of development."

Paragraph 16 of PPS1 confirms that development plans should address accessibility (both in terms of location and physical access) for all members of the community to jobs, health, housing, education, shops, leisure and community facilities. Paragraph 27 (v) reiterates this, setting out that in preparing development plan documents, planning authorities should seek to ensure that everyone can access services or facilities on foot, bicycle or public transport rather than having to rely on access by car, whilst recognising that this may be more difficult in rural areas.

Paragraph 20 confirms that development plan policies should take into account the protection of the wider countryside and impact of the development on landscape quality.

PPS3 sets out the national planning policy framework for delivering the Government's housing objectives. Paragraph 36 states that the Government's policy is to ensure that housing is developed in suitable locations which offer a range of community facilities and with good access to jobs, key services and infrastructure

PPG13 sets out the Government's planning guidance on transport planning. Paragraph 4 sets out the following objectives:-

1. promote more sustainable transport choices for both people and for moving freight;
2. promote accessibility to jobs, shopping, leisure facilities and services by public transport, walking and cycling, and
3. reduce the need to travel, especially by car.

In summary the Core Strategy is not consistent with the following two objectives of national policy:

- Minimising the need to travel
- Protecting the wider countryside and landscape quality

Minimising the need to travel

Core Strategy Submission Document

O - 16200 - 9891 - Policy H3 - Extension to residential envelopes post-2021 - i, iii

16200 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

The Core Strategy Submission Document recognises that a high proportion of the Rochford workforce commutes out of the District, with 30% travelling to work in Southend (Paragraph 2.53).

It states that:-

"the strength of the spheres of influence of the large neighbouring centres of Southend, Basildon and Chelmsford means that traffic is drawn through Rochford District's own centres to them. This not only has an impact on traffic congestion in general, but also engenders concern with regards to air quality within the District's town centres." (Paragraph 2.62)

Paragraph 6.5 of the Core Strategy states that the Council recognises that diverting development and population growth away from rural areas to existing urban areas can assist in achieving sustainability objectives.

Draft Policy H3 proposes various extensions to existing settlements, however, these extensions will inevitably lead to increased car use from a greater number of commuters.

A more sustainable option is to provide a residential extension to Southend on the Tithe Park site.

As detailed in the 'Tithe Park' masterplan (August 2008), the site is within 10 minutes walk of the shopping and associated amenities of the Asda superstore, the local shops situated on the Broadway, Southend, and individual local shops within Shoeburyness. It is within 10 minutes walk of a number of primary and secondary schools. Furthermore, the site is within comfortable cycling distance of Shoeburyness Railway Station with direct links to London Fenchurch Street as well as local stops within Southend including Southend Central Railway Station from where the town centre amenities can easily be accessed. There are also bus stops situated to the south of the site along Eagle Way.

Tithe Park is therefore better connected than some of the other locations set out in Draft Policy H3, for example, South West Hullbridge, which is not within comfortable cycling distance of a railway station. It will also have no harmful impact on the traffic congestion within Rochford Borough which, some of the other locations suggested in the Core Strategy will as they are likely to be home to commuters to Southend who will travel to Southend everyday by motor car.

Protecting the wider countryside and landscape quality

Draft Policy H3 proposes several extensions to existing settlements. Whilst, the Core Strategy does not allocate specific sites, it is important that the locations set out in Core Strategy Draft Policy H2/ H3 are able to provide sites which are well related to their settlement and do not impact on the surrounding landscape.

Tithe Park abuts the urban area of Southend to the south and west and therefore will have an acceptable impact in terms of the overall openness of the countryside.

Justification

Draft Policy H3 is not justified because it is not the most appropriate strategy when considered against reasonable alternatives, as required by paragraphs 4.36 - 4.38 of PPS12 (Justification of Core Strategies). In particular, the proposed location of housing, as an extension to the Southend urban area, is a more sustainable option and therefore a more appropriate strategy.

The Strategic Housing Land Availability Statement (SHLAA) had not been published at the time of the submission version consultation, only a summary table had been produced. It is therefore impossible to understand how Draft Policy H3 is underpinned by this key part of the evidence base and is therefore justified.

However, having considered the other documents, including the Strategic Environmental Assessment Baseline Information Profile 2008 - 2009, it is clear that Tithe Park should be considered sequentially preferable to the areas identified in Draft Policy H3. For example:-

• West Great Wakering is situated within the Crouch and Roach Farmland Landscape Area which has a higher landscape sensitivity than the Tithe Park site which is located within the South Essex Coastal Towns Landscape Area.
• Depending on the sites chosen, there is a possibility that land south west of Hullbridge will be in Flood Risk Zone 2 or 3

Given these findings it is clear that the proposed sites are not based on a robust and credible evidence base.

Summary:

The Core Strategy is unsound because draft Policy H2 is neither justified nor consistent with National Policy.

The areas designated in Policy H2 are not the most appropriate areas and land at Tithe Park, should be designated within Policy H2/H3 for c. 390 dwellings.

Additional evidence supplied, Council ref AE26

Change to Plan

Policy H3 to be amended to include our clients site as an 'Area' in the table. The area could be known as 'land to the south of Poynters Lane, adjoining the urban area of Southend.

Full Text:

LDF - Preferred Options - Rayleigh conurbation.

On behalf of Rawreth Parish Council I confirm that this letter is a formal response of objection to the final draft of Rochford District Councils Core Strategy Preferred Options document.

Firstly, at no time has the Parish of Rawreth been included or mentioned in any "Tier" on page 33 of the document, the criteria for allocation of houses - within the Core Strategy. If it had been included it should have been in Tier 4 and this is, therefore, UNSOUND.

The Parish Council believes that to develop 550 houses in one place within area no: 144, land to the north of London Road and then to add a further 220 to the Rawreth Industrial Estate area will totally destroy the character and rural outlook of Rawreth and surrounding areas. It will destroy the residents' "strong sense of identity within their own settlement" and is, therefore, UNSOUND.

The huge development of 550 houses is totally unacceptable. The land north of London Road is good quality agricultural land which is protected by the Green Belt -GB1 - fulfils all purposes under PPG2 and should be retained as such. Once used for development this land can never be returned to agricultural use, and if you continue to erode into our Green Belt and farmland it will be lost forever.

The Parish Council believe a proportion of the houses required to be built in our area should compliment and enhance Rawreth, cause as little extra congestion to our already heavily overcrowded roads as possible and provide a pleasant environment for those people wishing to move to the area. This particular area is part of the "Gateway to Rochford" and is the "strategic buffer" between Rayleigh and Wickford. Reference is made in the Core Strategy document to "avoiding coalescence" of villages/towns, however a development of this size immediately erodes the buffer between Rayleigh, Rawreth and Wickford, starts coalescence, destroys the rural character of Rawreth and, therefore, is UNSOUND.

The Core Strategy Document details Rochford District Councils priorities and objectives and details how the role of the Core Strategy features in achieving these. In support of the Parish Councils observations and alternative proposals they comment as follows.

Page 5 "Fostering greater community cohesion"

Development of land between Rawreth Lane and north of London Road will not give any community cohesion at all, it will simply be an extension to the west of Rayleigh giving residents no real sense of belonging, they will live within the Parish of Rawreth, yet they will be considered as living in Rayleigh as has been proved with other developments along Rawreth Lane such as Laburnum Way.

Page 12 "Priority 5 Essex roads are safer less congested and everyone has access to essential services"

The roads and infrastructure in the Rawreth area are completely full to capacity. The A127, A1245, A129 London Road, Rawreth Lane and Watery Lane just cannot take any more traffic and the proposed development on land to the north of London Road will increase traffic to a completely unsustainable level. On numerous occasions this year incidents within and on the outskirts of the Parish have brought traffic to a standstill for hours along London Road, Rawreth Lane, Watery Lane/Beeches Road and the Hullbridge Road. It took some residents 1 ¼ hours to proceed along Rawreth Lane and into Hullbridge - a distance of 1 1/2 miles.

The proposed development at the western edge of Hullbridge, which is, in fact, largely in Rawreth would also greatly increase the traffic problems in the area. Rawreth Parish Council understand there would be a proposal to "widen/straighten" Watery Lane/Beeches Road, with a roundabout at the junction with the Hullbridge Road. This is an extremely dangerous junction even at the present time and would become increasingly so. There is also the question of where the traffic would go when it reaches Battlesbridge at the Western end, it cannot possibly cross the Bridge as this is "restricted" and in a Conservation Area, therefore, it would have to turn left and proceed to the A1245 - a very dangerous junction.

Beeches Road/Watery Lane is also shown in the document as a new cyclist route. Surely this is a conflict of interest, a road widening/straightening proposal coupled with a cycle route.

Page 33 "Tier Settlements"

Nowhere in the Core Strategy Document is Rawreth Parish actually mentioned, it features in the "all other settlements tier 4" and is referred to as "land north of London Road Rayleigh" or "West Rayleigh" yet, the housing allocation of 550 dwellings between 2015 and 2021 and the 220 planned for the Rawreth Industrial Estate is the largest that any area is taking. Rawreth Parish currently has 380 dwellings and an electorate of 812, yet the proposed housing figures are set to increase the overall number of dwellings in the Parish by 203%.

Pages 34 to 36 "The efficient use of land for housing" and "Extensions to residential envelopes and phasing"

The Core Strategy Document states that "the Council recognises the importance of making best use of brownfield land" and "whilst the Council acknowledge that the housing requirement stipulated in the East of England Plan is a minimum, it must also be mindful of the need to maintain Green Belt as far as possible" yet the proposed 550 houses on the land

Core Strategy Submission Document

16475 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

north of London Road will all be built on Green Belt land of high agricultural value. The document states that "the Council will direct development to the most sustainable locations on the edge of settlements having regard to:"

"The potential to avoid areas of constraint (such as areas at risk of flooding, sites of ecological importance"

"The historical, agricultural and ecological value of land"

"The potential to create a defensible Green Belt Boundary and

"The avoidance of coalescence with neighbouring settlements"

Yet these key factors all seem to have been ignored when choosing the site to the north of London Road and, therefore, the proposal is UNSOUND. The Parish of Rawreth has a history of flooding, the land in Rawreth Lane will drain into the already overloaded brook system and the Services in the area would be unable to cope with this increase in housing - drains and sewers are already working to capacity. Heavy rain earlier in the year resulted in flooding in Watery Lane and the Rawreth Brook system has been very close to flooding twice already this year. During a meeting between the Parish Council and the Environment Agency we were advised that this situation will worsen with increased housing.

Page 42 "Gypsy and Traveller Accommodation"

This section details the need for an allocation of 15 pitches by 2011, it also states that they "will examine the potential of current unauthorised sites to meet this need" and that "sites will be allocated in the west of the District" The west of the District is in fact Rawreth, but yet again the Parish name has not been detailed. The Parish already has an unauthorised site which is the subject of an enforcement case and although well kept is on the brow of a hill on a main highway with restricted access which Essex County Council have already raised concerns about, this is not a site that should be considered as part of the requirement due to its location, but also, why is the allocation of all 15 pitches being detailed to one area?

Page 43 to 44 "Appendix 1"

Details of all the infrastructure to accompany residential development is listed, yet there are no detailed costs, have these been done? And are these achievable? Large numbers of housing in one area, as stated in the infrastructure requirements, will necessitate a new primary school. County figures suggest that there will be surplus places in Rayleigh schools even with new housing. Obviously these will be in the wrong parts of the town so increasing the risk that an existing school could close. It makes sense to spread the development in smaller sites around the town, avoiding closure and preventing unnecessary provision of a new school.

Page 57 "Strategies, Activities and Actions - The Green Belt"

The document states that "The Council will continue to support the principals of restricting development in the Green Belt, as set out in PPG2 and will preserve the character and openness of the Green Belt" it further states that "a small proportion of the District's Green Belt will have to have its designation reviewed to allow development" The entire development of 550 houses planned for land north of London Road is all on Green Belt land as is the land at Hullbridge, how does this equate to a "small proportion"?

The Councils own Policy GB1- Green Belt Protection states "The Council will allocate the minimum amount of Green Belt land necessary to meet the District's housing and employment needs" and that they will "direct development away from the Green Belt as far as is practicable and will prioritise the protection of the Green Belt land based on how well the land helps achieve the purposes of the Green Belt".

This area of land confirms all 5 purposes of the national PPG2 - Green Belt:-

It prevents the unrestricted sprawl of western Rayleigh

It provides a barrier to prevent the ultimate merging of Rayleigh, Rawreth and Wickford

It assists in safeguarding the countryside from encroachment

It preserves the setting and special character of historic towns

Assists in urban regeneration, by encouraging the recycling of derelict and other urban land

Rawreth Parish Council have observed that there are a number of sites that were put forward in the "Call for Sites" that are pre-used brownfield land in the Green Belt land, and as such would prove beneficial and in their opinion should have been considered for development. Their non-inclusion as "brownfield" sites makes the current proposals

UNSOUND:

Site No; 73 Hambro Nursery a site of approximately 3.93 hectares, coupled with the adjacent site Clovelly, would provide between 200 and 250 houses in an area of approximately 4.85 hectares this area would have good access directly from the A1245 and if expanded north westward to include land up to and around the Village Hall, approximately another 2.08 hectares could produce between 50 and 80 further houses. This area could be accessed either from the slip road (Chelmsford Road) to the south of the Nevendon Garage or from Church Road.

Both of these sites would remove the need for extra traffic along the A129 and Rawreth Lane which are both already operating well over maximum capacity. This development would require a footbridge for pedestrians, cyclists and horses over the A1245.

Rawreth Parish Council believe these proposals would be sensible infill of these areas and would be on "Brownfield" sites where current businesses are not particularly progressive and would not result in the loss of many jobs. Our figures are quite conservative and we believe that if these sites were chosen a much reduced number of houses would need to be built "North of London Road" on Green Belt land.

Phase 2 - With regard to the houses that are proposed for the Northeast corner of Rawreth/Hullbridge, the Parish Council are concerned that any development would cause considerable extra congestion to the immediate roads. We understand that the thoughts are to "straighten" and improve parts of Watery Lane and Beeches Road to provide access to and through Battlesbridge - a conservation area. Recent experience of deep flooding in Watery Lane with the road closed for several days on 3 occasions in the early part of 2009 proves that this proposal is completely unsustainable. The local drainage systems simply cannot take the amount of run-off experienced now and with further development this

Core Strategy Submission Document

16475 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

would increase the problem.

If this development is to go ahead, the Parish Council believe that a relief road should be built, from the end of Watery Lane, skirting to the west of the Rayleigh Park Estate, crossing Rawreth Lane at a mini-roundabout and entering a vastly improved A129 at approximately Lower Barn Farm. This would take any necessary traffic in and out of the area efficiently.

The Parish Council further believe that the Michelins Farm site No: 49 would be an ideal site for the Rawreth Industrial Estate. This would adjoin proposed industrial sites within the Basildon District and would provide excellent road and transport links. Rawreth Parish Council also proposed that the land opposite Michelins Farm could be used to re-site the illegal Gypsy/Traveller site that is currently situated on the busy A1245. The land opposite Michelins Farm would not only be a much safer site for Gypsy/Traveller pitches, but the correct use of the land would also ensure the environmental improvement of the site as a whole.

All of the above proposals were submitted to Rochford District Council, but they were not taken into consideration in the final draft resulting in the predominant use of Green Belt land for development, bounded by already congested roads and, therefore, the proposals are UNSOUND.

Summary:

Phase 2 - With regard to the houses that are proposed for the Northeast corner of Rawreth/Hullbridge, the Parish Council are concerned that any development would cause considerable extra congestion to the immediate roads. We understand that the thoughts are to "straighten" and improve parts of Watery Lane and Beeches Road to provide access to and through Battlesbridge - a conservation area. Recent experience of deep flooding in Watery Lane with the road closed for several days on 3 occasions in the early part of 2009 proves that this proposal is completely unsustainable. The local drainage systems simply cannot take the amount of run-off experienced now and with further development this would increase the problem.

If this development is to go ahead, the Parish Council believe that a relief road should be built, from the end of Watery Lane, skirting to the west of the Rayleigh Park Estate, crossing Rawreth Lane at a mini-roundabout and entering a vastly improved A129 at approximately Lower Barn Farm. This would take any necessary traffic in and out of the area efficiently.

Change to Plan

The Parish Council further believe that the Michelins Farm site No: 49 would be an ideal site for the Rawreth Industrial Estate. This would adjoin proposed industrial sites within the Basildon District and would provide excellent road and transport links. Rawreth Parish Council also proposed that the land opposite Michelins Farm could be used to re-site the illegal Gypsy/Traveller site that is currently situated on the busy A1245. The land opposite Michelins Farm would not only be a much safer site for Gypsy/Traveller pitches, but the correct use of the land would also ensure the environmental improvement of the site as a whole.

Full Text: Please see section 2-3 of accompanying statement - Council ref AE31

Summary:

In the Regulation 25 iteration of the Core Strategy Document, Policy H3 set out the General Housing Locations Post 2021 Preferred Option. This included a further 90 units directed towards South Canewdon, in addition to the 60 units by 2015, which have now been provisionally phased between 2012 and 2021.

It appears that the 90 units directed to South Canewdon after 2021 have at this stage have been redirected to other areas, although there is no explanation for this within the Core Strategy Document itself or any rationale available within the background documentation for the decision to do this.

Geographically speaking, Canewdon is one of only two significantly sized settlements in the east of the district. It is important that the sustainability of the settlement is maintained. Suitable development with the appropriate mix of housing would be enabled by an increased phased allocation as was preferred in the previous iteration of the Core Strategy document.

Under the Government's Strategic Housing Policy Objectives set out in PPS3, Paragraph 9, the aim to create sustainable, inclusive and mixed communities in all areas both urban and rural is emphasised. A larger allocation after 2021 will increase the provision of a mix of housing, consequently improving the long term sustainability and viability of the settlement, which is located in one of the more rural areas of the District.

This revised strategy for phasing would increase the potential for the Core Strategy Objectives and Sustainable Community Strategy (SCS) Priorities to be met, as shown by the following:

- the objective to reduce inequalities of service provision (CS) by locating houses in a sustainable location close to existing services;
- to foster greater Community Cohesion (SCS) by providing community facilities such as public open space that includes play space; and
- to address the causes of climate change (CS) by providing housing in locations that are well served by sustainable means of transport.

Due to the changes made in the housing distribution post 2021 in the district since the Regulation 25 consultation document, the Submission document fails the test of soundness for policy H3 in terms of not being justified by a robust evidence base.

In addition, the policy is not considered to be the most appropriate strategy when considered against reasonable alternatives of allocating sufficient housing to the east of the District in order to support the provision of an appropriate volume and mix of types and tenures of housing in all areas urban and rural. Policy H3 is for this reason, also considered to be unsound through non-conformity with national planning policy under PPS3 which aims to enable the above mixed distribution of housing.

Change to Plan

The change required to the DPD to make Policy H3 sound is to review the need for an increased allocation, extending Canewdon after 2021, in addition to the proposed allocation between 2015 and 2012.

Full Text: Representations on behalf of Fairview New Homes

1. We are instructed by our client, Fairview New Homes, to submit comments on the published Core Strategy Submission Document. For ease specific reference has been made in accordance with the paragraph and policy numbers as contained in the published document. We would like the opportunity to represent our Client at the forthcoming Examination of the Core Strategy DPD and would be grateful for confirmation that this is possible.

2. Fairview New Homes have an interest in a parcel of land to the South West of Rayleigh Town Centre, as indicated on the attached site location plan. This land was previously identified in the Core Strategy Preferred Options documents to provide an urban extension to the south west of Rayleigh. This option has now been withdrawn in the Core Strategy Submission document and it is on this basis these representations are provided to the Council.

3. The Submission Core Strategy has been considered against the requirements set out at Paragraph 4.36 of PPS12 requiring core strategies to be justifiable and effective in order to be found sound, as follows:

Justified:

- i. Founded on a robust and credible evidence base
- ii. The most appropriate strategy when considered against the reasonable alternatives

Effective:

- i. Deliverable - the Core Strategy should show how the vision, objectives and strategy for the area will be delivered and by whom, and when, including who is responsible for implementing different elements of the strategy and when
- ii. Flexible - a strategy is unlikely to be effective if it cannot deal with changing circumstances. Plans should show how they will handle contingencies.
- iii. Able to be monitored - monitoring is essential for an effective strategy and will provide the basis on which the contingency plans within the strategy would be triggered.

4. To summarise our comments, Fairview New Homes strongly object to the Core Strategy as is currently presented on the basis the document is currently unsound for a number of reasons:

â€¢ The lack of robust and credible evidence base

â€¢ Failure to clearly discount reasonable alternatives

â€¢ The effectiveness of the plan is also considered to be flawed and the Council's approach to deliverability and flexibility is questioned.

5. Fundamentally, we question the soundness of the Core Strategy due to the lack of available evidence to support the choices made by the Council. In particular, there is a strong reliance on the findings of the 2009 Strategic Housing Land Availability Assessment (SHLAA) although it is understood this document is not due to be published for consideration alongside the Core Strategy. We, therefore, reserve the right to submit additional comments to the Core Strategy consultation following the publication of the SHLAA.

6. The 2009 SHLAA is clearly listed at Paragraph 1.29 of the submission Core Strategy as one of the evidence base documents the Council have drawn upon when drafting the Core Strategy. The documents listed are all considered to have played an important role in informing the Core Strategy. PPS12 also recognises at Paragraph 4.37 the importance of demonstrating how choices made in the plan are backed up by factual evidence identified in evidence base documents.

7. As a starting point it is important to state it is Fairview New Homes greatest concern there is no background provided within the Core Strategy document, or indeed any of the available evidence base documents, identifying why the Local Planning Authority has chosen to remove some of the sites previously proposed for housing development. In addition, there is also no justification as to why the retained urban extension sites are more suitable than those removed from the draft plan.

8. The following provides specific comments in response to the relevant areas of the Core Strategy.

Housing

9. It is stated at Paragraphs 4.10-4.12 that the Council have adopted a balanced approach when locating new housing between higher tier settlements and lower tier settlements. Although there is no detail provided as to how the Council

Core Strategy Submission Document

O - 16613 - 5219 - Policy H3 - Extension to residential envelopes post-2021 - i, ii

16613 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

intend on implementing this balanced approach or how the strategic allocation of housing contributes to the balance required. Our Client cannot support this approach until further detail is understood as to the proportion of housing being allocated to each settlement tier.

10. The proposed distribution of housing development during the plan period does not appear to be proportionately allocated between the various settlement tiers. We would argue that development should be distributed proportionately in line with the size of the settlement in order to benefit for available services and facilities. Rayleigh recognised as having best access to services within the district at Paragraph 2.68 of the Core Strategy. On this basis it is considered the development should primarily be directed to Rayleigh with a proportionate level of housing to the remaining settlements in the District.

Policy H1 - The efficient use of land for housing

11. In general the use of residential extensions to meet the remaining housing requirement that cannot be delivered through the redevelopment of appropriate previously developed land is supported by Fairview New Homes.

12. It is understood there is a need to prioritise use of brownfield land in line with national policy requirements but this needs to be a carefully balanced and realistic approach in identifying appropriate urban extensions to accommodate the majority of the District's housing, as identified in the table at Paragraph 4.6 and later at Paragraph 4.15.

13. Policy H1 sets out that the Council will seek the redevelopment of Rawreth Lane Industrial Estate, Foundry Industrial Estate, Stambridge Mills and Star Lane Industrial Estate. Without sight of the 2009 SHLAA it is not possible to understand whether the Council's choice to release employment land for housing is appropriate and Fairview New Homes cannot, therefore, support this element of Policy H1. This objection is further amplified by the fact additional employment land is required but is yet to be identified.

Policy H2 - Extensions to residential envelopes and phasing

14. The Council's intention to provide a balanced strategy for housing provision is mentioned again at Paragraph 4.18. The comments made at Paragraphs 9 and 10 above are also relevant in this respect.

15. In comparing the Preferred Options Core Strategy Document and Submission Core Strategy Document there is a significant reduction in the number of housing units being provided in urban extensions pre 2015, from 1450 dwellings to 775. From discussions with the Local Planning Authority it is understood the Council are seeking to provide the District's housing requirements by increased development densities. From the evidence available in the Submission Core Strategy and summary of SHLAA sites a number of the sites identified as urban extensions have in fact been allocated a reduced number of dwellings, including the land to the north of London Road, Rayleigh. We would, therefore, consider the approach taken by the Local Planning Authority to provide the required level of housing is untenable and unjustified.

16. In discounting preferred options PPS12 makes clear at Paragraph 4.38 the requirement for Local Planning Authorities to consider and evaluate reasonable alternatives. As set out above, the choices the Council have pursued have not been substantiated and without the consideration of reasonable alternatives the Core Strategy cannot be considered justified and therefore unsound.

17. However, this is our opinion based only on discussions with the Local Planning Authority rather than a thorough evidence base and we will consider the evidence in detail when it become available and provide further comment.

18. Paragraph 4.19 of the draft Core Strategy details the Council's primary factors in determining the location of future urban extensions. It is presumed the Council have assessed each of the proposed urban extension sites against the following criteria and that this information is contained within the SHLAA, although we have not been provided with any evidence of this to assess. It can be demonstrated that the land identified on the attached site location plan meets all of the requirements set out below.

â€¢ The proximity and relationship to existing centres, facilities, services

â€¢ The availability of infrastructure and/or the potential for additional infrastructure to be provided for development in such areas

â€¢ The potential to reduce private car dependency

â€¢ The potential to avoid areas of constraint (such as areas at risk of flooding, sites of ecological importance, public safety zone etc)

â€¢ The historical, agricultural and ecological value of land

â€¢ The impact on highway network (including availability and impact on existing network, as well as potential for improvements to be delivered)

â€¢ The relationship of development locations to the District's area of employment growth

â€¢ The potential to create a defensible Green Belt boundary

â€¢ The avoidance of coalescence with neighbouring settlements

19. In summary, Fairview's land is sustainably located in particularly close proximity to Rayleigh Town Centre and train station. In addition, the location of the land provides a natural extension and rounding of settlement boundary. An extension to Rayleigh in this location offers no opportunity for coalescence with neighbouring settlements nor does it constitute urban sprawl.

Core Strategy Submission Document

16613 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

Policy H2 - Extensions to residential envelopes and phasing

20. Although it is stated a flexible approach to the timings of the release of land will be maintain no explanation is provided as to why some sites are considered suitable for development pre 2015 and others post 2015. Paragraph 4.22 elaborates further to state a number of factors have been considered when determining the phasing of strategic housing sites although this information is not clearly available to assess.

21. As stated above the principle of releasing certain areas of greenbelt land is considered the best approach to meeting the Council's housing provision requirements. However, Fairview New Homes object to the omission of the land to the South West of Rayleigh for housing development as previously identified in the Core Strategy Preferred Options document. The site identified on the attached site location plan has been assessed against the Council's criteria, as set out at Paragraph 18 above and each requirement can be met. Without any clear explanation as to why this site has been discounted and the only other strategic housing site identified in Rayleigh is located further away from Rayleigh Town Centre and the associated services and facilities including the train station, Fairview New Homes object to Policy H2.

22. As considered at the outset of these representations the draft Core Strategy cannot be considered robust, and therefore sound, without clear justification and evidence base.

Policy H3 - Extension to residential envelopes post-2021

23. Policy H3 is supported on the basis that the release of greenbelt land is required for housing and this is the most appropriate approach to meet the Council's housing requirements, as set out at Paragraph 21 above.

24. However, it is unclear why some of the sites previously identified for housing development pre 2015 up until 2021 in the Preferred Options Core Strategy document have now been allocated for development post 2021, such as South East Ashingdon. It is stated at Paragraph 4.24 of the Submission Core Strategy document those areas identified for post 2021 development may not be immediately deliverable. However, there is no information available to understand why these sites are now no longer considered suitable for pre 2015 development as they were in December 2008. As a result, Fairview New Homes consider Policy H3 to be unjustified and therefore unsound.

Affordable Housing

25. The acute need for additional affordable housing is recognised at Paragraph 4.30. It is unclear from the draft Core Strategy document exactly how much affordable housing is required in the District in the plan period.

26. However, taking the starting point as set out at Paragraph 4.30 that the Thames Gateway South Essex Strategic Housing Market Assessment requires 131 net additional affordable dwellings per year which constitutes 52% of the District's overall annual housing target. In order to achieve this target using the Council's proposed policy requirement that new housing developments are to provide 35% affordable housing, 375 new dwellings would need to be developed each year. This calculation does not account for those developments with fewer than 15 dwellings which have no requirement to provide affordable housing or developments which cannot viably afford to provide non-market housing.

27. An annual requirement of 250 dwellings is identified at Paragraph 4.2 of the Core Strategy which would leave a significant short fall of affordable housing and act to compound the current situation. The approach taken by the Council ultimately accepts there will always be a shortfall in affordable housing provision and does not seek to redress this. We do not, therefore, consider this to be a robust or justified approach to achieving affordable housing in the District.

28. It is, therefore, considered in order to meet the District's affordable housing requirement additional housing land should be identified in order to ensure a wholesale increase in housing provision to address the Council's shortfall in affordable housing and meet the targets set for the plan period. The most appropriate and effective method by which to secure affordable housing provision is through developing large sites that are viably able to offer affordable housing units.

29. During the consultation of the submission Core Strategy the Council's Housing Strategy (2009) was not available and we reserve the right to make further comment on this document following the publication of this evidence.

The Green Belt

30. It is fully accepted by the Council that the Green Belt boundary is currently too tightly drawn and the release of some Green Belt land is necessary to meet the District's development requirements. However, it needs to be demonstrated that the areas of Green Belt land to be lost are justified and located in the most appropriate area and that areas of release land do not undermine the principle of the Green Belt.

31. It is understood from Paragraph 6.7 of the Submission Core Strategy the Council will seek to examine the degree to which current Green Belt land is helping to achieve the purposes of the Green Belt when considering reallocating land. However, areas of Green Belt are proposed to be reallocated for urban extensions prior to this research being undertaken.

Core Strategy Submission Document

O - 16613 - 5219 - Policy H3 - Extension to residential envelopes post-2021 - i, ii

16613 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

32. Fairview New Homes fully support the justified retention of the areas of Green Belt where appropriate and the release of Green Belt land where needed. However, at present the proposed Housing policies and Green Belt policies are not coherent and the reallocation of certain areas of Green Belt is not based on a credible evidence base.

Environmental Issues

Policy ENV4 - Sustainable Drainage Systems (SUDS)

33. Fairview New Homes would like to support the flexibility contained within Policy ENV4 which recognises it is not always viably possible to incorporate SUDS in all developments.

Policy ENV8 - On Site Renewable and Low Carbon Energy Generation

34. We would also like to support Policy ENV8 on the same basis as Policy ENV4 in that it is important that the production of energy from renewable or low carbon sources is only required where it is viably possible so as not to resulting in developments not coming forward.

Transport

Policy T8 - Parking Standards

35. Fairview New Homes object to Policy T8 as it is currently contrary to National Policy requirements as set out in PPG13 which contains maximum parking standards. Indeed, this is recognised at Paragraph 10.27 of the Submission Core Strategy document. Enforcing minimum parking standards is not consistent with local or national sustainability aims and should not be an approach pursued by the Council.

Summary:

Policy H3 - Extension to residential envelopes post-2021

23. Policy H3 is supported on the basis that the release of greenbelt land is required for housing and this is the most appropriate approach to meet the Council's housing requirements, as set out at Paragraph 21 above.

24. However, it is unclear why some of the sites previously identified for housing development pre 2015 up until 2021 in the Preferred Options Core Strategy document have now been allocated for development post 2021, such as South East Ashingdon. It is stated at Paragraph 4.24 of the Submission Core Strategy document those areas identified for post 2021 development may not be immediately deliverable. However, there is no information available to understand why these sites are now no longer considered suitable for pre 2015 development as they were in December 2008. As a result, Fairview New Homes consider Policy H3 to be unjustified and therefore unsound.

Full Text:

Policy H3 - Extension to residential envelopes and phasing

Summary: The Respondent finds the document to be unsound in its present form, however were the amendments set out in these representations to be incorporated then it is considered that the document will be sound. Although the inclusion of land at South-East Ashingdon is supported, there is no need for this policy or its table. There is no evidence or reasoning for holding back these sites until the latter years of the plan period.

Full text: This policy is unnecessary; there is no obvious justification for holding back these units to the latter years of the plan. The Council will be left with no flexibility, if the delivery identified in the first two phases does not materialise or if it exceeds current expectations. It is commonplace in other Core Strategies that have been adopted to allow a 10% contingency. Rochford has allocated its RSS minimum requirement and allows no flexibility to adjust if the need arose. The housing numbers (currently contained in Policy H2 and Policy H3) can be placed in one policy and in a single table. The Council may prefer to see some locations developed ahead of others and if so, there can be policies and reasoned justification set out in the Strategy to explain why this is necessary. There does not appear to be any identified infrastructure requirements, which will affect the release of numerous sites and as such no reason to set 5 yearly tranches for the release of land.

There is an absence of explanation in the Strategy or in the evidence base that points to the reasons why specific locations have been held back to post 2021. If the Council is to maintain a three tiered release of land then it must explain in its evidence base, why certain sites appear in certain phases. It is surprising that the phasing does not closely align itself with the settlement hierarchy explained on page 40. For example, the allocations for South-East Ashingdon, which lies in the first tier, is identified for development post-2021. There is no explanation for this or any obvious logic as to why the allocation is held back in this way. Development in this stop-start fashion is uneconomical and causes prolonged upheaval, which may present developers with delivery difficulties and delay the provision of community infrastructure.

As identified in the response to Policy H2, the Core Strategy only needs to have a single table which identifies the broad locations and provides an estimate of the amount of units that are likely to be delivered in each of those locations.

The emphasis in the Core Strategy should be shifted towards the flexible delivery of the maximum amount of housing in the most sustainable locations. It should not be about prescriptive delivery of the minimum amount of housing required in what appear to be arbitrary phases.

Proposed Amendment to Policy H3: This policy is neither justified nor effective and should therefore be deleted and the sites identified within it should be set out in an updated version of Policy H2.

Masterplan/Facilities plan Council ref AE22

Respondent: Essex County Council (Mr Roy Lewis) [9072] **Agent:** N/A

Essex County Council
ESH - Spatial Planning
Planning and Transport
County Hall
Chelmsford
CM1 4JU
01245-437578

Full Text: ROCHFORD CORE STRATEGY SUBMISSION DOCUMENT, SEPTEMBER 2009
RESPONSE OF ESSEX COUNTY COUNCIL

1. General Comment

Essex County Council welcomes and broadly supports the Core Strategy prepared by Rochford District Council. The Strategy contains policies and proposals that address the spatial characteristics, issues and opportunities facing the District whilst respecting the distinctive qualities of the different settlements and parts of the District.

The County Council fully supports the maintenance of a strong policy approach to protection of the Green Belt and of the quality of environmental assets in the District whilst making adequate housing and employment provision within the District. The Core Strategy presents an approach that emphasises a balance of opportunity through the District and recognition of emerging economic prospects in the District and neighbouring areas. The intended preparation of more detailed Action Area Plans for London Southend Airport and its environs and for each of the three town centres of Rayleigh, Rochford and Hockley will further enhance the approach of the Core Strategy. The emphasis on the three town centres is particularly welcomed as offering a stimulus to improvement in the services and facilities available locally within the District whilst also affording possibilities of increased community focus.

2. Housing Distribution and Locations

The East of England Plan requires Rochford to provide a minimum of 3,790 additional dwellings between 2006 and 2021. In addition, provision for a further 1,000 dwellings should be made between 2021 and 2025 to ensure delivery of housing for at least 15 years from adoption of the Core Strategy (expected in 2010). Of this total requirement the District Council has identified a capacity of 2,000 dwellings through a Strategic Housing Land Availability Assessment. This means that the Core Strategy has to identify locations for about 1,750 dwellings to be delivered before 2021 and a further 1,000 dwellings between 2021 and 2025.

Policy H1 (The efficient use of land for housing) is supported. However, prioritisation of the reuse of previously developed land within settlements for additional housing is unlikely to provide a sufficient source of provision due to the generally residential nature of existing settlements in the district and the absence of potentially large sites of previously developed land. The assessment of potential for additional housing provision within settlements already includes the proposed re-allocation to substantially residential use of 4 existing employment areas.

Within Policy H2 (Extensions to residential envelopes and phasing) and Policy H3 (Extension to residential envelopes post-2021) the District Council has adopted a balanced approach to the distribution of additional housing locations, which is based on identification of tiers of settlements defined by reference to their accessibility to jobs, services and facilities (some of which lie outside the District) and the need to protect the valued environments within the District. This approach is generally supported, although implementation and delivery of individual schemes should give further thought to securing sustainable functional relationships between proposed development locations and availability of jobs, services and facilities.

The proposed scale and phasing of development at each of the identified locations in Policy H2 and Policy H3 should be capable of being supported by County Council service groups, provided that adequate and timely funding is available. The County Council would wish to work with the District Council to ensure that future infrastructure and facilities would serve and give benefit to the existing adjoining community as well as to the new development. In this respect it is noted that the Core Strategy proposes preparation by the District Council of a Planning Obligations and Standard Charges document (Policy CLT1). The District Council's document should fully reflect the County Council's own approach to this matter as set out in the County Council's 'Developer's Guide to Infrastructure Contributions'.

3. Economic Development

The approach to Employment Growth (Policy ED1) is supported. Given the economic structure of Rochford District the support to be given to protection and enhancement of the role of small and medium sized businesses; enhancement of the District's commercial centres; and development of a skills training academy is particularly welcome. These measures will assist in building on the existing economic resource of the District.

Proposals for the comprehensive development of London Southend Airport and its environs (Policy ED2) are supported.

Core Strategy Submission Document

S - 16688 - 9072 - Policy H3 - Extension to residential envelopes post-2021 - None

16688 Support

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

The further elaboration of proposals through an Area Action Plan will provide a firm foundation to realise the economic regeneration and growth opportunities presented by effective use of the Airport. The recognition of the potential environmental impact of the Airport and the commitment to work to mitigate any adverse impacts on the environment and local amenities is fully supported.

The location of the proposed Eco-Enterprise Centre to the North of London Southend Airport (Policy ED4) is supported. Creation of the Centre would assist reduction of the rate of business start-up failure in the district. Further the proposed location for the Centre would afford a clear offer to businesses within an area of varied business activity.

The continued protection and enhancement of existing employment land (Policy ED3) is supported, as is the identification of 4 existing employment sites for appropriate alternative, substantially residential, uses. Each of the 4 sites affords particular issues and opportunities whereby their redevelopment for other uses and relocation of existing occupiers would confer advantage for the immediately neighbouring areas and for the District as a whole.

4. Town Centres

The town centres of Rayleigh, Rochford and Hockley, and future plans for them, are closely linked to the economic development of the District but also present the opportunity to offer greater community focus within the District. The varied approach being taken to each of these town centres is supported (Policy RTC4, RTC5 and RTC6), notably the recognition of the role and purpose of the town centres beyond retail uses.

The contribution that the County Library service could make to plans for the town centres should not be overlooked. The 5 libraries in the District are substantial footfall draws in their localities and act as a 'community anchor store'. This has knock-on effects in encouraging use of neighbouring retail and service facilities. Further the Library service is currently looking at co-location opportunities for other services within the libraries which would enable them to act as a community focus.

5. Transport

The transport aspects of the Core Strategy are well balanced in identifying potential measures that would meet the needs of existing residents and businesses in the District as well as needs arising from future development. The approach reflects and makes good reference to the transportation aspirations of the County Council. The policy emphasis on close working between the District Council and the County Council to advance the transport aspirations is welcomed and fully supported.

In relation to parking standards (Policy T8 and Paragraph 10.30) the review undertaken by Essex County Council in conjunction with the Essex Planning Officers Association has now been completed. Revised parking standards have been agreed and signed off as County Supplementary Guidance, in accordance with PPS12, and is being applied by the County Council as Local Highways Authority.

6. Coastal Protection Belt

Policy ENV2 (Coastal Protection Belt) is not supported because in its current form it is not a suitable or effective replacement policy for Policy CC1 of the Replacement Structure Plan. Structure Plan Policy CC1 (The Undeveloped Coast - Coastal Protection Belt) currently remains a 'saved' policy of the Essex and Southend-on-Sea Replacement Structure Plan, April 2001 (following a direction of the Secretary of State, dated 27th September 2007, under paragraph 1(3) of Schedule 8 to the Planning and Compulsory Purchase Act 2004). The existing Policy CC1 reads, 'Within the Coastal Protection Belt defined in adopted local plans there shall be the most stringent restrictions on development within the rural and undeveloped coastline situated outside existing built-up areas, and any development which is exceptionally permitted within this Belt shall not adversely affect the open and rural character, historic features or wildlife.'

Core Strategy Policy ENV2 should be revised to include specific reference to,

- * Definition of the boundary of the Coastal Protection Belt in another Development Plan Document;
- * the application of the most stringent restrictions on development within the rural and undeveloped coastline;
- * any development exceptionally permitted not adversely affecting the open and rural character, historic features or wildlife.

7. Historic Environment

The importance of the historic environment in Rochford District is clearly identified within the Core Strategy document. Nevertheless, the policy guidance could be usefully enhanced to promote consideration and enhancement of the historic environment and use of the historic environment to shape place. This would be achieved by the following amendments to the Core Strategy,

- * Policy ENV1 (Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites) should be amended by deletion of the final sentence and its replacement with, The Council is committed to the protection, promotion and enhancement of the diverse historic landscape and extensive surviving archaeological deposits of the District.

Core Strategy Submission Document

S - 16688 - 9072 - Policy H3 - Extension to residential envelopes post-2021 - None

16688 Support

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

* Paragraph 8.15 of the supporting text should be amended to better support the suggested amendment to Policy ENV1. The existing text of Paragraph 8.15 should be deleted in its entirety and replaced by,
The historic environment of Rochford District has developed through a history of human activity that spans over 450,000 years. Much of the resource lies hidden beneath the ground in the form of archaeological deposits. Other elements such as the historic landscape, the pattern of field, farms, woods and grazing marsh which characterise the District, are a highly visible record of millennia of agriculture, industry and commerce. Of particular significance are the coastal, island and estuarine areas where multi-period landscapes reflecting the exploitation of coastal and marshland resource survive. The District also includes the important historic medieval market towns of Rochford and Rayleigh.

* Page 16 (Sustainable Community Strategy Priority: Promoting a Greener District) should be amended to further support the approach to the Historic Environment. The fourth bullet of the Key Section/Policies of the Core Strategy should be amended to include the word 'historic', so that the first sentence of the bullet would read,
The Environment chapter seeks to protect and enhance the biodiversity, historic and natural environment of the District by protecting sites of local, national and international importance.

8. Community Infrastructure

The approach to Community Infrastructure is supported. The County Council would wish to work with the District Council to ensure that future community infrastructure and facilities would serve and give benefit to the existing adjoining community as well as to the new development. In this respect it is noted that the Core Strategy proposes preparation by the District Council of a Planning Obligations and Standard Charges document (Policy CLT1). The District Council's document should fully reflect the County Council's own approach to this matter as set out in the County Council's 'Developer's Guide to Infrastructure Contributions'.

In addition, it should be noted that,

* Some County Council services are not highly visible despite being regarded as highly desirable community services by local residents. The need to ensure adequate funding and contributions to enable these services to meet community expectations should be recognised and acknowledged in consideration of planning obligations and standard charges.

* The Adult Community Learning Centre at Rocheway, Rochford could be better located with regard to the wider Rochford/Castle Point area of service. Relocation of the Centre could provide opportunities both at the new location and for the current site.

* The Core Strategy should make specific reference to,

o Appendix H1, Location at South Canewdon: new Early Years and Childcare facilities;

o Policy CLT2, final sentence: insert after the words 'primary schools' the words 'and Early Years and Childcare facilities';

o Appendix CLT1, Other issues/comment: for Early years and childcare facilities add 'Land to be allocated within new residential areas, as appropriate'.

9. Implementation, Delivery and Monitoring

The inclusion in the Core Strategy of a section considering Implementation, Delivery and Monitoring is welcomed and supported. Nevertheless, the District Council, in moving towards implementation and delivery of the individual elements of the Core Strategy, should highlight those schemes and projects that are critical to achievement of other aspects of the Strategy.

Further, the monitoring proposal for Policy H6 (Lifetime Homes) and for Policy CP1 (Design) should be amended,

* Policy H6 (Lifetime Homes) - the identified monitoring tool is Core Indicator H6 Housing Quality Building for Life Assessments. The Building for Life Assessment methodology was devised to measure the overall design/layout quality of housing developments. It was not devised to measure compliance with Lifetime Homes, which is largely, but not exclusively, concerned with internal space standards and the provision of internal arrangements within dwellings to meet needs of all residents.

* Policy CP1 (Design) - the monitoring indicator proposed by the Core Strategy is not supported because it is unclear what the indicator would actually be measuring. The proposed indicator should be replaced by the Core Indicator, Housing Quality - Building for Life Assessments, as suggested by the County Council in its response to the Core Strategy Preferred Options, October 2008. A better approach would be to base evaluation and monitoring of Policy CP1 on the Commission for Architecture and the Built Environment's (CABE) 20 Building for Life principles, particularly as Government has endorsed these principles and is urging local authorities to use them to assess design quality. It is suggested that the monitoring arrangements for Preferred Option CP1 be deleted and replaced by the following text, 'The success of the implementation of this policy will be monitored by assessing schemes, or an appropriate sample of schemes, against the Commission for Architecture and the Built Environment's (CABE) Building for Life principles.'

10. Access to Housing

The Core Strategy notes the higher prevalence of older people in Rochford District and the need to support them. However, a more broadly based approach to access to housing should be adopted by Policies H4, H5 and H6. It should recognise the presence of other vulnerable adults in the community, for example, those with learning or mental health disability, and the range of possible forms of accommodation, including supported, sheltered and extra care accommodation. The high level of owner occupation in the District further emphasises the need for a broader approach. The emphasis on Lifetime Homes would not address the variety of future needs, whilst the potential exemptions to the

Core Strategy Submission Document

S - 16688 - 9072 - Policy H3 - Extension to residential envelopes post-2021 - None

16688 Support

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

Summary: Lifetime Homes policy standard in Policy H6 are likely to act against demographic trends. Within Policy H2 (Extensions to residential envelopes and phasing) and Policy H3 (Extension to residential envelopes post-2021) the District Council has adopted a balanced approach to the distribution of additional housing locations, which is based on identification of tiers of settlements defined by reference to their accessibility to jobs, services and facilities (some of which lie outside the District) and the need to protect the valued environments within the District. This approach is generally supported, although implementation and delivery of individual schemes should give further thought to securing sustainable functional relationships between proposed development locations and availability of jobs, services and facilities.

The proposed scale and phasing of development at each of the identified locations in Policy H2 and Policy H3 should be capable of being supported by County Council service groups, provided that adequate and timely funding is available. The County Council would wish to work with the District Council to ensure that future infrastructure and facilities would serve and give benefit to the existing adjoining community as well as to the new development. In this respect it is noted that the Core Strategy proposes preparation by the District Council of a Planning Obligations and Standard Charges document (Policy CLT1). The District Council's document should fully reflect the County Council's own approach to this matter as set out in the County Council's 'Developer's Guide to Infrastructure Contributions'.

Full Text: The background evidence includes the Essex Thames Gateway Water Cycle Study Scoping Report carried out by Scott Wilson and completed in March 2009 however the findings of this report have failed to be captured in the policies of the Core Strategy (with the exception of the water efficiency requirements related to the Code for Sustainable Homes in Policy ENV9).

The Scoping Report identifies that in terms of water resources, Essex and Suffolk Water are currently operating at a demand-supply deficit during dry years and that, although the approval of the Abberton reservoir scheme will largely alleviate these problems in the future, the deficit will remain until this scheme comes online in 2014. The Scoping Report therefore recommends that, as well as seeking high levels of water efficiency in new and existing developments, new development is phased up to 2014.

In addition to the water resources issue, the Scoping Study also that there are some potential capacity issues with both the Rochford Wastewater treatment works (WwTW) and the sewerage network associated with it which would need resolving around 2015. There might also be some issues with the quality of discharge from the Rayleigh East WwTW which will require further investigation but could be exacerbated by unphased growth.

In terms of water quality, the three WwTWs serving Rochford District - Rochford, Rayleigh East and Rayleigh West - discharge to tributaries of the Rivers Roach and Crouch which are Shellfish Waters and flow into areas designated under national and international environmental legislation (SSSI, SPA and Ramsar designations) and the water quality of these watercourses is generally poor. Page 48 of the Scoping Study states that further development draining to these three WwTWs has the potential to exacerbate the problem. Again further investigation is required into this issue.

In not addressing the findings of this report we deem the Core Strategy to be unsound in that it is not effective. This is because we do not believe that the Policies set out in the Core Strategy have clearly identified the infrastructure implications of the strategy and the delivery mechanisms and timescales for implementation have not been addressed. There is also an element of inflexibility in failing to recognise the findings of this report and the potential impact on growth delivery.

In order to make the Core Strategy sound, it must incorporate the findings of the Water Cycle Study Scoping Report and recognise the potential constraints to development delivery.

Referring to the report in Policy H3 would be an option. At this stage in the process we would consider it sufficient to include a statement about the intention to phase development in line with the findings of the Scoping Report and subsequent Outline and Detailed Stage Water Cycle Studies. The Site Allocations DPD would require more detailed information to inform the phasing so as to avoid bringing forward sites prematurely.

Please note that should the Inspector deem it necessary for us to attend the Examination in Public, we would be happy to do so but our preferred method at this time would be written representations.

Summary: The background evidence includes the Essex Thames Gateway Water Cycle Study Scoping Report carried out by Scott Wilson and completed in March 2009 however the findings of this report have failed to be captured in the policies of the Core Strategy (with the exception of the water efficiency requirements related to the Code for Sustainable Homes in Policy ENV9).

Full Text:

The submission document fails the test of soundness for policy H3 in terms of not being justified. The policy is not founded on a robust and credible evidence base and it is not the most appropriate strategy when considered against reasonable alternatives of allocating sufficient housing in the tier 1 category town of Rayleigh which meets the Council's sustainability criteria. Furthermore Policy H3 of the Submission DPD is not considered to be sufficiently flexible to deal with any changes to the RSS by being reliant on less sites and again fails the test on flexibility grounds. See accompanying Strutt and Parker Planning Document and Cannon Consulting Initial Highways Access and Accessibility Statement.

(Council ref AE27 and AE27a)

The change required to the DPD to make Policy H3 sound is for the inclusion of the site to the south west of Rayleigh for at least 100 houses in the plan period.

Representation submitted in relation to proposed allocation of housing to the south west of Rayleigh and attendance required at examination to support the allocation of this site which is not in the submission document (see other responses to Core Strategy).

Summary:

The submission document fails the test of soundness for policy H3 in terms of not being justified. The policy is not founded on a robust and credible evidence base and it is not the most appropriate strategy when considered against reasonable alternatives of allocating sufficient housing in the tier 1 category town of Rayleigh which meets the Council's sustainability criteria. Furthermore Policy H3 of the Submission DPD is not considered to be sufficiently flexible to deal with any changes to the RSS by being reliant on less sites and again fails the test on flexibility grounds. 2.0 Housing:

Policy H1 - The Efficient Use of Land for Housing

2.1 Swan Hill recognises the importance of seeking to concentrate new developments mainly in the existing urban areas, on previously developed land where possible, particularly in view of the Government seeking to ensure 60% of all such new developments are on previously development land (PDL).

2.2 However, given the character of the District, and the strategic housing requirement of the East of England Plan, Swan Hill supports the approach that the Council must also make provision for additional development on the edge of existing settlements on greenfield sites, particularly in the most sustainable locations. As such, Swan Hill supports that where feasible, the redevelopment of existing employment sites for residential/employment purposes can make a contribution towards the strategic housing requirement, provided that sufficient additional employment land is brought forward to ensure the stability of employment levels in the District, and to ensure employment growth meets the East of England Plan requirements.

2.3 Swan Hill considers that Policy H1 should include consideration that new extensions to existing settlements have regard to their potential impact on the wider characteristics and openness objectives of the Green Belt.

Policy H2 - Extensions to Residential Envelopes and Phasing

2.4 Swan Hill generally supports the approach taken by the Council in this policy. As set out above, Swan Hill consider the Council's acknowledgment that housing requirements should be met through the allocation of land on the edge of the existing settlements is the most suitable way forward to meeting the Council's strategic housing requirement and complies with the advice in PPS3.

2.5 The need for suitable greenfield urban extensions represents the best way forward for the Council to meet its strategic housing requirement, as set out in the East of England Plan. Swan Hill supports the recognition that the potential supply of alternative previously developed sites is limited, without detrimentally affecting the character of the District, and therefore the best way forward is the use of sustainable greenfield urban extensions to the existing settlements of the District.

2.6 However, Swan Hill consider that a fundamental consideration that the District Council should consider relates to the potential impact of the urban extensions on the Green Belt policy has been somewhat overlooked. The wider sustainability credentials of the settlements of the District should only be one of many key considerations for determining the level of expansion. In view of the proximity of Southend-on-Sea to all the main settlements of the District, and the influence this has on the likely location many people would travel for employment and leisure, sustainability of many of the settlements is not a key overarching factor, and greater weight should be placed on the potential impact on the openness of the Green Belt, as this cannot be remedied if development occurs in the wrong location.

2.7 As such, Swan Hill considers that determining the location of growth for the main settlements should be to identify

Core Strategy Submission Document

O - 16875 - 8329 - Policy H3 - Extension to residential envelopes post-2021 - i

16875 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

those locations where the impact on the wider setting of the Green Belt can be minimised. Further justification for those general locations chosen should be identified in Policy H2. In this regard, Swan Hill has serious concerns regarding the removal of Land South West of Great Wakering as a viable option for the growth of the settlement. The development of this area of Great Wakering, in addition to the potential redevelopment of the Star Lane Industrial Estate could provide a more comprehensive development, whilst ensuring that the wider openness of the Green Belt is maintained. Land South West of Great Wakering is significantly better placed to limit the impact on the wider Green Belt than Land West of Great Wakering, and could contribute to the provision of an important amenity and wildlife site for the local community.

2.8 In addition, Swan Hill consider that the Council now has no reserve provision in the event that any of the existing employment sites set out in Policy H1 fail to come forward for development within the envisaged timescale. Further, Land West of Great Wakering has not been identified in the SHLAA as a deliverable site to help meet the strategic housing requirement, contrary to the requirement set out in PPS3.

2.9 As such, Swan Hill would support the provision of suitable sites which could be safeguarded for future development in the likelihood of a shortfall in supply.

Policy H3 - Extensions to Residential Envelopes Post 2021

2.10 As set out above, Swan Hill supports the overall approach the Council has taken towards the provision of sustainable urban extensions as a suitable means of meeting their strategic housing requirement. However, as set out for Policy H2 above, Swan Hill has serious concerns regarding the removal of several proposed sites set out in the October 2008 Preferred Options Core Strategy, without any guarantee of the ability to deliver those sites set out in Policy H1.

2.11 As also considered above, the inclusion of West of Great Wakering for 250 dwellings should not be included ahead of South West of Great Wakering, in view of the fact that the site is not identified in the SHLAA as available, suitable and achievable as required by PPS3, and thus is not supported by a robust and creditable evidence base for its inclusion as a strategic site for development.

2.12 Whilst Swan Hill acknowledge that alterations to Policy H1 has resulted in the removal of some locations for growth in Policy H3 (as set out in the Sustainability Appraisal), Swan Hill does not consider that the most appropriate locations have been chosen.

2.13 In addition to the matters raised above, the use of West of Great Wakering would also result in the loss of valuable agricultural land, which clearly in a Green Belt location, should be less suitable for development than other sites, such as South West of Great Wakering, which would have limited impact on the wider Green Belt policy, and not result in the loss of valuable agricultural land.

2.14 Finally, in respect of Policies H1, H2 and H3, all of the above comments are based on our interpretation of the Submission Version Core Strategy when compared to the October 2008 Version of the Core Strategy. Without the ability to undertake a detailed assessment of the Council's SHLAA, it is not possible to clarify the proposed Core Strategy position regarding the proposed direction of growth proposed for the settlements in the District. As such, Swan Hill reserves the right to make additional representations regarding the proposed Policies H1, H2 and H3 following the publication of the SHLAA in due course.

Policy H4 - Affordable Housing

2.15 In general terms, Swan Hill supports the approach taken by the Council towards the provision of affordable housing for new residential developments. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H5 - Dwelling Types

2.16 Swan Hill supports the policy provision of H5, and considers that the approach taken by the Council for this policy represents a suitably flexible alternative to stipulating percentages of dwelling mix, sought by some local authorities. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H6 - Lifetime Homes

2.17 In regard to this policy, Swan Hill objects to the Council's policy where all new dwellings should be provided to the Lifetime Homes Standard. Whilst it is acknowledged that the UK has an aging population, Swan Hill considers that seeking to provide Lifetime Homes on all sites is considered to be overly onerous for proposed developers, particularly when considering the requirement for all car parking spaces to be suitable for disabled users, which could result in more schemes becoming unviable. Therefore, the provision of a percentage of Lifetime Homes should be considered through negotiations with the Council at the planning application stage, and should be determined on a case-by-case basis.

3.0 Character of Place: Policy CP1 - Design

Core Strategy Submission Document

O - 16875 - 8329 - Policy H3 - Extension to residential envelopes post-2021 - i

16875 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

3.1 The Town and Country Planning (General Development Procedure) Order 1995 (As Amended) makes the submission of a Design and Access Statement for most types of planning applications a Statutory requirement, and as such, the provision of a Design Brief represents a pre-requisite of all major planning applications.

3.2 Policy CP1 seeks to ensure the provision of good, high quality developments that reflect local characteristics and distinctiveness, this ideology is supported by Swan Hill.

4.0 The Green Belt:
Policy GB1 - Green Belt Protection

4.1 Following the amendments to the wording of the Policy since the October 2008 Preferred Options Core Strategy, Swan Hill is now generally supportive of Policy GB1 and its supporting text. However, as expressed above, it is important that where alterations to the Green Belt boundary occur as a result of the extension of the settlements to meet the strategic housing requirement, both the minimal amount of land is taken and where that land is taken for development, it represents the best available land which has a minimal impact of the wider openness characteristic of the Green Belt.

5.0 Environmental Issues:
Policy ENV3 - Flood Risk

5.1 Swan Hill generally supports the approach set out in Policy ENV3 regarding ensuring development accords with the sequential test of PPS25. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV4 - Sustainable Drainage Systems (SUDS)

5.2 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV4. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV8 - On-site Renewable and Low Carbon Energy Generation

5.3 Whilst Swan Hill recognises the importance of reducing carbon emissions, particularly in new housing developments, and the role this can play in reducing the nations overall Greenhouse emissions. As such Swan Hill is generally supportive of Policy ENV8. It is noted that Policy ENG1 of the East of England Plan sets out a threshold of developments comprising 10 or more dwellings. Swan Hill consider it important for the District Council to justify the reduction in the threshold level.

5.4 Further, no assessment of Policy ENV8 has been set out in the Sustainability Appraisal which justifies the change in threshold from that of Policy ENG1 of the RSS.

Policy ENV9 - Code for Sustainable Homes

5.5 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV9. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

6.0 Community Infrastructure, Leisure and Tourism:
Policy CLT1 - Planning Obligations and Standard Charges

6.1 Swan Hill generally supports the overall approach the Council has taken in Policy CLT1. It is considered Policy CLT1 sets out a degree of flexibility to ensure that all sites are considered on a site-by-site basis, assessing the individual merits of each planning application, in order to ensure the levels of contributions applicable meet the five tests of Circular 05/05. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policies CLT5 - Open Space;
CLT7 - Play Space;
CLT8 - Youth Facilities; and,
CLT10 - Playing Pitches

6.2 Swan Hill supports the need for new residential developments to incorporate a degree of new publicly accessible open space, children's play space, youth facilities and playing pitches, and as such, generally supports the policy approaches taken by the Council.

6.3 However, it is important that whilst the Council may seek to undertake an assessment of providing standard charges for new development, which, as set out in Policy CLT1, this should be based on thorough public consultation and consideration and sound justification. Swan Hill consider that within the provision of a standard charge, it is important that such provision allows for a degree of flexibility to ensure that each site is assessed individually and on its own merits. This is particularly important for those sites close to existing open spaces and facilities. As such, the levels of

Core Strategy Submission Document

16875 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

open space and recreation facilities required in the 'standard charge' should be based on an up-to-date PPG17 Open Space assessment, which should be used to form a key consideration in the levels of provision likely to be required in the standard charge system proposed.

7.0 Transport: Policy T1 - Highways

7.1 Swan Hill supports the overall objectives set out in Policy T1 requiring developments to be located and designed to reduce the reliance on the private car and to meet the infrastructure needs generated by development or seek to help achieve these needs is acceptable in principle.

7.2 Swan Hill recognises the importance of providing sufficient infrastructure provision to meet the requirements of development, and that where developments have insufficient consideration of impact on existing infrastructure, they should be considered unacceptable and contrary to National policy guidance. However, Swan Hill considers it important to emphasise that the developer's role should not be seen as a means to meet existing shortfalls in provision.

Policy T3 - Public Transport

7.3 Swan Hill is generally supportive of the policy approach set out in T3, however, as set out in paragraph 7.2 above, it is important that the District Council do not consider that it is the developer's responsibility to resolve existing shortfalls in provision of public transport, and any contribution towards additional public transportation provision should only be to mitigate against the additional level of demand likely from the development proposed.

Policy T5 - Cycling and Walking

7.4 Swan Hill supports the general approach to this policy, as Swan Hill recognises the importance of promoting the use of alternatives to the private car. The policy provision acknowledges the need to ensure relevant contributions in the event of additional travel demands generated by individual developments, whilst also setting out additional aspirations for the cycle network in the District.

7.5 As such, Swan Hill considers this policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy T8 - Parking Standards

7.6 The Council has recently (January 2007) adopted SPD on the requirements for parking standards, and as such, Swan Hill generally supports the policy approach chosen by the Council. As set out in the SPD, whilst Swan Hill generally supports the approach taken by the District Council towards setting residential parking standards, in that the Council has recognised that in the suburban areas, even with some access to public transport, the majority of residents will rely on the use of private cars. However, Swan Hill has concerns over the failure of the District Council to comply with the provisions of PPG13: Transport (2001) which sets out that Local Planning Authorities should not set minimum standards for car parking. Whilst it is acknowledged that PPS3 sets out provision for the consideration of local circumstances, it is considered that the Council has not justified this deviation from PPG13's maximum standard.

7.7 Whilst it is acknowledged that such justification may become apparent through the work currently being undertaken by Essex County Council, until such time, the District Council should only seek to apply the maximum standards indicated in PPG13. However, Swan Hill recommends that the District Council make provisions in the wording of the Policy to allow for changes in the event that future policy on car parking standards need to reflect the County standard, following the completion of the County Council review.

8.0 Economic Development: Policies ED3 - Existing Employment Land ED4 - Future Employment Allocations

8.1 In respect of Policies ED3 and ED4, Swan Hill notes that they have changed considerably since the October 2008 Preferred Options document, in that they are site specific regarding the location of the proposed redevelopment of existing employment sites. These four sites are also identified in Policy H1 - Efficient Use of Land, and in general, Swan Hill supports the approach to the redevelopment of these sites (where feasible) based on the assessments of the sites set out in this version of the Core Strategy.

8.2 However, Swan Hill has concerns that these policies might not be considered suitably sound given that insufficient opportunity has been allocated for consultation on their redevelopment. Without the SHLAA being publically available prior to the consultation on this Core Strategy, an insufficient evidence base has been provided to corroborate that these sites are neither suitable or deliverable to meet the test of soundness requirements.

Summary: Policy H3 - Extensions to Residential Envelopes Post 2021

2.10 As set out above, Swan Hill supports the overall approach the Council has taken towards the provision of sustainable urban extensions as a suitable means of meeting their strategic housing requirement. However, as set out

Core Strategy Submission Document

16875 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

for Policy H2 above, Swan Hill has serious concerns regarding the removal of several proposed sites set out in the October 2008 Preferred Options Core Strategy, without any guarantee of the ability to deliver those sites set out in Policy H1.

2.11 As also considered above, the inclusion of West of Great Wakering for 250 dwellings should not be included ahead of South West of Great Wakering, in view of the fact that the site is not identified in the SHLAA as available, suitable and achievable as required by PPS3, and thus is not supported by a robust and credible evidence base for its inclusion as a strategic site for development.

2.12 Whilst Swan Hill acknowledge that alterations to Policy H1 has resulted in the removal of some locations for growth in Policy H3 (as set out in the Sustainability Appraisal), Swan Hill does not consider that the most appropriate locations have been chosen.

2.13 In addition to the matters raised above, the use of West of Great Wakering would also result in the loss of valuable agricultural land, which clearly in a Green Belt location, should be less suitable for development than other sites, such as South West of Great Wakering, which would have limited impact on the wider Green Belt policy, and not result in the loss of valuable agricultural land.

2.14 Finally, in respect of Policies H1, H2 and H3, all of the above comments are based on our interpretation of the Submission Version Core Strategy when compared to the October 2008 Version of the Core Strategy. Without the ability to undertake a detailed assessment of the Council's SHLAA, it is not possible to clarify the proposed Core Strategy position regarding the proposed direction of growth proposed for the settlements in the District. As such, Swan Hill reserves the right to make additional representations regarding the proposed Policies H1, H2 and H3 following the publication of the SHLAA in due course.

Full Text: Local Development Framework

Representations on the Core Strategy
Submission Document, November 2009
On behalf of Barratts Eastern Counties

Introduction

The requirements of Core Strategies are enshrined in the 2004 Planning and Compensation Act, the Town & Country Planning (Local Development) England (Regulations) 2004 and the 2008 policy guidance in PPS12. The requirements of Coe Strategies are clear. And they are legal requirements. The Core Strategy must comply with the Local Development Scheme, Statement of Community Involvement and the Regulations. The Core Strategy must be subject to a sustainability appraisal, have regard to national guidance, conform generally with the Regional Spatial Strategy and have regard to any Sustainable Community Strategy. A Core strategy must be sound - justified, effective and consistent with national policy. The following representations therefore focus on these legal requirements.

HOUSING

Paragraph 4.6 - Evidence Base

To meet the soundness test Submission Core Strategies (SCS) must be justified, that is to say it must be founded on robust and credible evidence base and comprise the most appropriate strategy when considered against reasonable alternatives. The housing strategy in as far as it identifies a need for Green belt sites is sound, however, there are other elements which are unsound.

Paragraph 4.6 notes that the Strategic Housing Land Availability Assessment (SHLAA) has examined the supply of housing. It is presumed that the Table at paragraph 4.6 is the outcome of this examination. Whilst the SHLAA has some legitimacy in that it identifies various sites that are apparently available, we are concerned that because the SHLAA was only published in November 2009 it post dates the SCS. This implies that the SCS is driving the SHLAA exercise rather than the other way round. Whilst this may have no real practical effect on the outcome of the SCS and the identified need for Green Belt sites, the Inspector will be mindful of the advice in paragraphs 33 and 54 of PPS3 that SCS draw on the evidence in SHLAA. It may be that the SCS should explain how the evidence base has been used to justify the strategy.

PPS12 explains at paragraph 4.37 that Core Strategies are based on thorough evidence. Since the SHLAA has only recently been published it is considered that the SCS is unsound as it is not justifiable. This, together with other comments on the SCS, indicates that the process should be delayed to ensure that a more robust document is placed in front of the EiP Inspector.

Table at Paragraph 4.6 - Evidence base

From our review of the available evidence it would appear that the housing land supply is insufficient and that Green Belt release are required. From the wider strategy being promoted we note that some of the sites that the District Council consider to be 'appropriate' are likely to relate to existing employment areas. As set out elsewhere in our representations, we maintain severe reservations that the redevelopment of existing employment sites for alternative uses and particularly the Eldon Way Industrial Estate is unsustainable. We will make reference to the effectiveness of this strategy in relation to sustainability, whether it is justified in the context of National Policy and the deliverability of such a strategy elsewhere.

In particular, paragraph 11.32 of the SCS refers to existing employment land and sites within the UCS. It does not refer the SHLAA and as such it appears that an evidence base to support the re-use of employment land for residential is not reported in the SCS.

Having reviewed the 2008 Annual Monitoring Report, as we did when commenting on the 2008 Preferred Options Core Strategy, we maintain severe doubts as to the appropriateness of some of the previously developed sites identified as potential housing sites and their expected housing yield. Whilst we cannot at this stage ascertain whether the SHLAA

Core Strategy Submission Document

16920 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

sites referred to in this table correlate with the Annual Monitoring Report and indeed the 2007 Urban Capacity Study, it is our view that there will be some commonality and so the reliance on these sites is likely to be at odds with Government Policy. We shall elaborate on this objection in relation to the specific housing policy below.

We note that the last two rows in the Table at paragraph 4.6 set out figures with and without Green Belt releases. The text to this section of the Core Strategy should, for reasons of clarity, explain that Green belt review will be necessary in order to deliver the required housing.

Paragraph 4.9

The table on page 40, which sets out the settlement tiers, is supported. Rayleigh, Rochford/Ashingdon, Hockley/Hawkwell are clearly the largest settlements in the District and they benefit from good employment, housing, leisure, community and public transport provision. These settlements are the most sustainable ones with the greatest mix of uses. Consequently, it is sensible that the Core Strategy identifies these as top tier settlements and is able to target them with growth accordingly. This component of the strategy is justified by reference to sustainability data and is effective, since targeting development at these locations will ensure a more sustainable pattern of development.

Paragraph 4.14

We maintain that the strategy for redeveloping the Eldon Way Industrial Estate for housing and other alternative uses to employment is unsound. It is neither justified nor effective. The Industrial Land Availability Study 2006 sets out on page 7 strategic objectives. The 3rd objective seeks to Support town centre and industrial estate enhancement initiatives aimed at improving the environment ensuring the area is economically prosperous and competitive. Clearly the strategy as currently drafted envisages major changes to existing industrial estates, including alternative uses. This strategy is not consistent with other strategies and evidence based studies and so cannot be justified in the context of the tests set out in PPS12. It is also an ineffective strategy since the new employment locations that would free up the Eldon Way site for redevelopment relies on transport infrastructure that has no certainty of being delivered. Principally, the erosion of employment uses at Eldon Way could make the settlement of Hockley/Hawkwell less sustainable and thus conflict with the tiered approach on page 40, paragraph 4.9.

Policy H1

Prioritising the use of previously developed land ("pdl") is supported in principle. It is a justified strategy in the context of PPS3 and effective as sequential choices can be made by implementing the policy. However, the District Council is also promoting a strategy which seeks the redevelopment of existing employment locations to alternative uses and by consequence is identifying green field sites for new employment development elsewhere (Policy ED4 refers). This 'land swapping' is not considered consistent with PPS3, nor is it considered to be justified or effective in delivering the desired strategy. This is particularly the case as most of the existing employment sites are occupied and therefore unavailable for redevelopment. In addition, the new Greenfield sites are in an arguably less sustainable locations away from the top tier settlements identified on page 40 of the Submission Core Strategy. Clearly this element of the strategy is inconsistent with the wider strategy.

The Industrial Land Availability Study 2006 is included as an evidence base by the District Council. It includes an introductory section, which explains that the authority wishes to make Rochford the place of choice for new business. It includes several strategic objectives on page 7 including "Support town centre and industrial estate enhancement initiatives aimed at improving the environment ensuring the area is economically prosperous and competitive." It reviews existing employment areas and identifies vacant land, including land available from allocations. It does not include any assessment of new sites or potential opportunities for new sites that might have been expected to feed into the Core Strategy. The strategy for identifying Green Belt site employment allocation does not appear to be based on any evidence in this document and in that context cannot be justified. The strategy being promoted potentially conflicts with Government policy in PPG13, PPG2 and emerging PPS4.

The Employment Land Study 2008 is a much later document. It has a key recommendation on page ii "we recommend that Rochford District Council adopts strong policies to protect existing employment land." Furthermore under recommendations for existing sites on page iii-iv of that document it states "In our view, Hockley Trading Centre is a strategically well placed employment location. However, we recognise the ambitions of the Hockley Town Centre masterplan and that within this the Council should consider it to be allocated for other uses. However, we recommend that this reallocation happen only if provision is made within the masterplan for office use within Hockley Town Centre as part of a mixed use scheme." The view of the writers of this document is clear - the Eldon Way Industrial estate (Hockley Trading Centre) is a good employment site and that it is for other reasons that alternative uses are being considered and only then if office development is supported. This supports our representations that new future uses at the Eldon Way site should be employment dominated and that alternative uses should relate to the objectives of the Town Centre which is to enhance the shopping and leisure facilities. Residential is not an appropriate alternative.

This document recommends the use of land to the west of Rayleigh for employment and envisages Green belt release. However, the SCS does not explain through the evidence base why existing employment sites should be 'deallocated' and Green belt land unnecessarily used.

Core Strategy Submission Document

16920 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

In addition to these key issues we have some specific concerns. As a consequence we maintain an objection to the second paragraph of Policy H1. This policy states that the Council will seek the redevelopment of various industrial estates including Eldon Way. The Policy says that alternative uses will be sought (presumably alternative to the existing employment offer) and that new land will be allocated elsewhere. This policy statement, in relation to Eldon Way in particular, is unsound for a number of reasons:

The emerging Hockley Area Action Plan consulted upon in 2008 states that the Eldon Way Industrial Estate is strategically well placed. In a sense this statement underplays the true importance of this highly sustainable employment location and only major employment area in Hockley/Hawkwell. The employment area is adjacent to the railway station and located a short distance from the main bus routes that run along Spa Road. Some of the residential areas of the town are also within walking distance of this commercial area, thus providing a potential for sustainable travel by employees. The Eldon Way Industrial Estate is therefore right at the heart of the settlement of Hockley/Hawkwell and provides an opportunity to meet sustainable transport objectives by reducing the need to travel by car. Consequently, this employment area should be highlighted as a premier employment site in sustainability terms, both in the context of PPG13, PPG4 and PPS6. To encourage alternative uses as set out in Policy H1 implies the removal of the majority of employment based activity at Hockley/Hawkwell and this would be contrary to National policy, would not be the most appropriate strategy when considered against alternatives and is therefore unsound.

Whilst it is acknowledged that improvement to the Eldon Way Industrial Estate can and should take place, the extent to which the mix of employment uses should be altered in favour of alternative land uses requires careful consideration. It is our view that a mix of existing or indeed new employment land uses with some Town Centre type uses should dominate the Eldon Way site. A mix of employment types between offices, light industry and other high technology industries should be encouraged as this will provide many locational advantages to the firms that agglomerate together. The Council says that the existing uses on this site are harmful to amenity. However, the site has operated for many years without any significant issues and if renewal for B1 type uses are encouraged then the employment area can be maintained without harm to amenity. Renewal of the employment stock can help develop and improve trade, improve the sustainability of businesses as a whole and make for a more flexible labour market as skill levels are varied. A singularly different use altogether or a variety of uses which excludes employment could undermine the long term sustainability of the area and Town Centre. As such Policy H1 is not an effective strategy and should be amended to acknowledge the importance of Eldon Way and the need to renew the employment stock to ensure that the site maintains its important role as a employment site, albeit with some ancillary alternative use development where appropriate.

The 2008 Retail Study notes that Hockley Town Centre is not strong and there is trade leakage. Eldon Way Industrial Estate provides a customer base for existing town centre uses. Weekday spending within town centres is an important contributor to the viability of many retail and leisure businesses either through expenditure by employees during the lunchtime trade or expenditure by employers, on necessary goods and services. This relationship helps sustain the critical mass of a centre and provides a platform for new retail and leisure growth. It is important to have a balanced centre with a variety of uses. Policy H1, as currently drafted, implies the removal of employment related development and this is likely to harm the vitality and viability of Hockley Town Centre. The Council has presented no evidence to suggest that this is not the case. Importantly, the 2008 Retail Study explains that there is a need for additional retail and office space. In principle we would support additional office and other B1 type uses plus retail but employment uses should always dominate for the sustainability reasons given above. Retail and office development are likely to present a viable alternative to some of the more industrial type uses.

Consequently, we do not support the phrasing of the third paragraph of Policy H1 and maintain that the most appropriate strategy is to seek renewal of the employment stock with employment based uses and with some new retail development. Removal of employment land uses completely as currently implied-which was the approach adopted in the emerging Hockley Area Action Plan - is not a justifiable strategy.

One of the key tests of a Core Strategy is consistency between policies in the emerging Plan and this strikes at the heart of demonstrating an effective strategy. Policy H1 implies alternative uses to employment and the relocation of Eldon Way to a site identified under Policy ED4. However, Policy RTC6 sets out a suite of policy criteria for Hockley Town Centre which includes employment and commercial activities. In addition Policy ED3 seeks the protection of sustainable employment sites (Eldon Way) and notes that some reallocation of existing employment sites will include a proportion of employment. It notes that in the case of Eldon Way employment development will form a component. The policies appear at odds with one another. The third paragraph of Policy H1 should be deleted as the second paragraph is sufficient to set a strategic context for delivering new housing development. The employment policies and Hockley specific policies should be left to consider the type and quantum of land uses appropriate in the area. If the third paragraph of H1 is to be retained then it should tie in more with Policy RTC6 and in our view explain that employment uses should dominate any redevelopment proposals for the Eldon Way site and that retail and leisure uses should be a supporting proportion.

Implementation, Monitoring and Delivery - page 132 onwards

One of the key tests of soundness is that the Core Strategy should be effective - it should be able to deliver its strategy. The Implementation strategy set out at page 132 onwards of the Core Strategy does not explain how Policy H1, RTC6 and the strategy for redeveloping Eldon Way (Policy ED2 and ED3) will be delivered. The comment at Policy ED3 on

Core Strategy Submission Document

16920 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

page 161 identifies it as a potential risk and alludes to land assembly difficulties and the choices to be made by owner/occupiers. In order to deliver the strategy there should be a clear understanding as to whether the new land use values being promoted are sufficient to encourage relocation voluntarily. Secondly there is a need for more information to be gathered and presented to show that current occupiers and landowners are willing to relocate and the timescales likely for this. For example, do the building lease contracts enable early review or are there any break out clauses. There should be some commentary on whether the Council will engage in compulsory purchase orders to pursue their strategy should the 'encouragement' route fail. As currently drafted there is no clear path to deliver the strategy and the danger is that despite reallocation, the sites identified for redevelopment will not come forward in the plan period. In this regard, evidence to satisfy the test of soundness is not provided.

Policy H2 - General Locations

We support the strategy that new housing growth should be targeted at land South of Hawkwell. This area is suitably located to the urban area of Hockley/Hawkwell and to tie in with the settlement tiers on page 40 of the Submission Core Strategy the same terminology for settlement should be used. This ensures a consistency within the SCS. The choice of this location as a housing growth area is appropriate as it would not contribute to the coalescence of the urban area with Ashingdon (there is existing development between this identified housing area at Rectory Road and Ashingdon and moreover, Rectory Road can form a natural physical boundary for the new Green belt boundary. This area is also well located to the existing road network. Cherry Orchard Way has recently been improved and provides much better accessibility to the proposed housing growth area than any other location around Hockley/Hawkwell. The existing bus routes along Rectory Road also make this location sustainable and the additional housing proposed will help underpin the financial viability of bus routes in this area. Locally there are employment opportunities, including the small commercial estate off Main Road. The Eldon Way Industrial Estate adjacent to the Town Centre also provides the opportunity for employment locally. Extensive public open space, play pitches and built leisure facilities are located just to the north of this area and a community hall is located off Briar Close, nearby. The area to the south of Hockley/Hawkwell is close to local shops on the corner of Heycroft Road and Main Road and there are numerous footpath links between this area and the local community including links via Thorpe Road, Thorpe Close, Briar Close, Hawkwell Park and Park Gardens. The area therefore provides the opportunity to enhance existing links, including cycle links, and contribute towards community integration - more so than other sites on the south side of this settlement. The site is also in the control of one house builder and deliverable.

However, we find that the Policy is not fully consistent with national policy and furthermore needs to be reviewed in order to be justified and effective. We have concerns as to how the Green Belt review strategy set out at Policy H3 and in the Local Development Scheme integrates with this policy and feel that Green Belt review should be more explicit throughout the SCS. We note that it is only Policy H3 which indicates the need for Green Belt land review. In fact Policy H3 only pays lip service to the need for a Green Belt review and provides, at best, loose advice in this regard. It says that prior to 2021 Green Belt will be safeguarded save for the releases noted under Policy H2. Policy H3 then goes on to talk about land release for development after 2021 but no time period is set out to provide a framework for any Green Belt review in this latter period. In our view Policy H2 and certainly Policy H3 and Policy GB1 should explain fully the need for a Green Belt review and that such a review should take place for a defined period. That such a review has not taken place in advance of the SCS is a serious matter for the Inspector to consider in the context of soundness. That said, it is considered that any review of Green Belt should have regard to a period beyond 2021 as indicated by draft Policy H3. Paragraph 1.9 of the East of England Plan explains "this RSS covers the period to 2021 but sets a vision, objectives and core strategy for the longer term". 2026 is therefore considered a minimum suitable period that any Green Belt review must have regard to in order to meet the 5 year land supply requirements in PPS3 for the period after 2021. However, Policy SS7 of the East of England Plan talks about Green Belt reviews up to 2031. In view of this and the need to explore the circumstances of Rochford - that existing settlements cannot contain future housing growth; that Green Belt is necessary to provide housing; and that these provide exceptional reasons to vary the Green Belt locally (paragraph 2.6 to 2.7 of PPG2) the policies and strategy for the SCS should identify a Green Belt review covering the period to 2031 and set out why a review is necessary.

Policy H2 - Phasing and Quantum

The 2008 Preferred Core Strategy document indicated that the area south of Hawkwell should deliver 330 dwellings over a phasing period to post 2021 (see Policy H2 and H3 of that document). The SCS reduces the quantum of housing in this area to 175 but expects delivery by 2015. At a broader level the Preferred Options Core Strategy of 2008, (Policy H2) required 1,450 dwellings to 2015 and a further 1,050 by 2021. In the SCS the figures are now 775 and 1,010 respectively.

Since the SHLAA post dates the publication of the SCS, we are uncertain as to the reason why such a significant reduction in quantum of housing and extensions to the residential envelope is considered necessary. Presumably it is the 'new' strategy to redevelop existing employment areas within the settlements that has led to this change. Our representations on this strategy and specifically the Eldon Way Industrial Estate are included elsewhere within our representations. Previously we have commented on the Table at paragraph 4.6 of the Submission Core Strategy and the lack of evidence to underpin that table. It seems odd that in the space of a year the expected requirement for Greenfield sites has effectively halved on the basis of a SHLAA exercise. The community is therefore not able to effectively

Core Strategy Submission Document

16920 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

comment on the housing land supply and at this stage the Submission Core Strategy is legally unsound.

That said, we are of the view that the quantum of housing envisaged south of Hockley/Hawkwell should be more than the 175 currently envisage. In coming to this view we have reviewed the Urban Capacity Study and the latest housing figures in the Annual Monitoring Report 2008. We conclude that the shortfall in housing land supply is such that 330 dwellings in this location is appropriate.

The recently published SHLAA is based upon the data obtained from the Urban Capacity Study 2007, a call for sites exercise and data from the Annual Monitoring Report 2008.

The 2007 Urban Capacity Study (UCS)

1. 2007 is widely recognised as being the peak level of house prices in the UK and it was acknowledged by Government and practitioners alike that 2007 house prices were at an unsustainable level. It is our view that utilising the 2007 UCS as an evidence base without reference to the market does not pick up the depressed demand that is likely to now exist. Recent corrections to the housing market now mean that housing land prices are at a much lower and arguably more affordable level than before. The implications are that some pdl may not be viable for housing development. Often brownfield sites have much higher development costs than Greenfield sites and so the yield from urban capacity will be much lower than anticipated in the 2007 study. One example is the employment allocation of the Adopted Local Plan located at 76-92 Main Road, Hawkwell. This site has been allocated for several years and has been available during the most recent rises in residential property prices during 2006-07. As a consequence the lack of progress on the site can only be described by its current occupancy and perhaps it comprises high value uses that do not encourage redevelopment. Despite this the site is identified as having high potential for alternative use and high potential demand. The SHLAA form notes that there is no information on legal constraints (e.g., tenancy agreements) As a consequence it is difficult to see how this could continue to be a potential site and as a consequence the allowance for green field releases should be increased.

2. There are considered to be other instances in the UCS and the recently published SHLAA where the assumptions and calculations would indicate that the 1301 urban capacity figure is over optimistic and the SHLAA assessment is limited. In the assessment of 'non-residential sites in appropriate locations' within the UCS assumptions are made as to the probability of sites coming forward for new housing. 68-72 West Street, Rochford is identified as a high probability site but we note that it has been subject to 7 refusals of planning permission/conservation consent. There is a significant gap between the urban capacity identified as being suitable by the Council and the capacity applied for by the owners. Given its alternate use value, it is debateable whether the two capacity figures can be reconciled. No 247 London Road is another example of a site allocated in the Local Plan but which hasn't come forward. This is now the subject of a proposal for a care home and if approved would further limit the scope for market/affordable housing capacity on the site. A striking example of how the urban capacity study has underestimated is also evidence by 2-4 Alderman's Hill, Hockley - described as a disused service station. There has been no residential development application on this site since 2004 and most recent applications have sought commercial use of the site. Rather than being evidence of housing land deliverability, this particular site evidences the need for commercial uses in the area. There are therefore deliverability doubts over these 'high probability' categories which amount to some 40 units.

3. In relation to the assessment in the UCS entitled 'intensification of existing residential uses' we note that the assessment is premised on an assessment of recent trends taking into account net completions between 2001-2006 and 2005-06. This is effectively an assessment of windfall trends and not an approach that PPS3 encourages. Importantly Table 3-12 in the urban capacity study seeks to project forward urban capacity from residential redevelopment - a period that benefited from high house prices and PPG3 guidance encouraging redevelopment. These two circumstances have markedly changed and so the assumptions and conclusions drawn would also have changed. Even taking into account the UCS discounting, the reliability of the 404 units from this source must be questioned and in our view the 1301 figure cannot be a sound basis for urban capacity and further Greenfield releases are necessary.

4. In the section of the UCS entitled 'subdivision of dwellings' and 'living above the shop' it is estimated that recent trends would result in 7 and 15 units. Our concerns with using trends as a basis for urban capacity are detailed above - PPS3 does not encourage this. Rather, local authorities are charged with surveying their areas, identifying which areas may yield urban capacity and how much and developing policies to achieve that. Government guidance does not encourage the estimation of windfalls in the way the UCS does.

5. Redevelopment of established employment land is a separate section within the UCS. At 1 above we identify the low probability of the Main Road residential allocation coming forward. This remaining section of the UCS considers 11 further employment sites which were first identified in the 2000 UCS. Three of these are considered to have a high probability of coming forward. We have looked at these three sites and can find no evidence that they are likely to come forward. In the 8 years between 2000 and 2008 the three identified high probability employment sites have not been developed and there is no reason to assume that the next 5-10 years will be any different. For example the Rawreth Industrial Estate is identified as being well used in the UCS and although it has some unneighbourly uses there is no indication that the site is available, suitable or deliverable for residential. Land between 39-69 Lower Lambricks, Rayleigh is identified as having a high probability of residential uses. Yet there is no

Core Strategy Submission Document

16920 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

evidence of any pre-application advice or planning applications for this area. Stambridge Mills, Mill Lane, Stambridge is a further example. This site is separated from the urban area, in a flood risk zone and protected in the 2006 Replacement Local Plan by Policy EB9 which promotes B1 uses. Against this background there is only two relevant planning applications affecting this area both date from the early 1990's and relate to a plant room and loading bay. There is no evidence that this is likely to come forward for residential purposes in the next 5-10 years.

6. In the UCS extant permissions are identified as 856 dwellings. It is important to note that this figure needs to be continually reassessed so that from the point of adoption of the Core Strategy a 5 and 10 year housing land supply is available. The SHLAA notes extant permissions for 2009-14 being 106. As noted below extant permissions do not necessarily translate into deliverable sites. There is therefore a contingency that needs to be built in. Further allocations on greenfield land need to be increased and as such the quantum of housing in the area south of Hockley/Hawkwell should be increased to 330 dwellings in order to begin to meet the shortfall identified.

The District Council's 5 year housing supply assessment

7. The District Council's Annual Monitoring Report ("AMR") 2008 purports to demonstrate a 5 year housing land supply. The preamble to Table 4.10 in the AMR 2008 explains that Rochford District Council ("RDC") has included units under construction, units with full permission, units with outline permission, units with a resolution to grant, units subject to preapplication discussion/Urban Capacity Assessment and land allocations in its trajectory. The reader is referred to Appendix B which breaks down the sites in more detail. The recently published SHLAA also includes a table showing a potential 1273 dwellings deliverable. However, it refers to "appropriate brownfield sites." Since these 'appropriate sites' are do not benefit from an application or a planning permission it is difficult to programme them into the housing delivery trajectory.

8. In the full planning permission category of the AMR 2008 where work has not yet started there can be no guarantee that all these sites will be delivered in the 5 years. This comment relates to the one above in relation to the recently published SHLAA. It is not uncommon for permissions to be obtained to provide a means for valuing a site where the owner has no immediate plans to sell the site or develop housing. Delivery may also be hampered by funding constraints, or site assembly problems (where sites are in an alternative use or relocation constraints). Appendix B of the AMR 2008 does not set out the intentions of the landowner or whether the sites are truly achievable in the 5 year period as per PPS3 requirements. The SHLAA purports to show developer intentions at Appendix C but the assessment by the local authority into the legitimacy of some of the claims is not presented. The evidence base is not as full as it should be to demonstrate the robustness of Table 4.6 of the SCS. It is also unclear the extent to which this table is based on either the UCS 2007, AMR 2008, SHLAA 2009 or a combination of all three. This should be set out clearly.

9. In addition, to the 'non delivery' of a proportion of new homes in the AMR 2008, there is concern at the timings of delivery in that data set, for example, 10 units in 2008-2009 relates to outline planning permissions and it is doubtful whether reserved matters can be turned round quick enough to begin delivering housing in this year period. There could well be examples in that set of data where the delivery of units in the first year of the 5 is unlikely, thus delivery is reduced for that period and pushed back and this process is then compounded throughout the data set up to and beyond year 5. Statistical evidence from the Department of Communities and Local Government ("CLG") reveals that building starts are 43% down on the quarter to March 2009 compared with March 2008. It is not clear whether the recently published SHLAA has taken this into account and unless it does the data in the Table at 4.6 of the SCS cannot be relied upon, particularly given the current recessionary circumstances. In relation to the Table at Paragraph 4.6 a refinement is therefore needed to take into account this effect on phasing.

10. This problem is compounded for other units relied upon where permission has been granted but no start on site has been made; this accounts for a considerable number of sites in 2009-10 period (100 dwellings) which is (year 2 of the 5 year period). A delay in these will require more Greenfield sites to be identified in order to meet the shortfall.

11. Finally we note that the East of England Plan expresses its land supply requirement as a minimum. This strategy is not reflected in the

Core Strategy Submission Document

16920 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

Submission version of the Core Strategy policy H2.

12. In summary since neither the UCS nor the Annual Monitoring Report form a SHLAA, reservations are maintained about the degree to which sufficient housing land has been identified.

Policy H3

In the Preferred Options Core Strategy 2008 more locations were identified for housing growth in the post 2021 phase. Whilst it is our view that land south of Hockley/Hawkwell should benefit from a greater number of dwellings than the 175 currently identified (330) in order to make the strategy effective. We are concerned at the significant change in strategy between the Preferred Option Core Strategy and the Submission version, which has significantly less housing growth on green field sites. This change in strategy is so significant that we would question whether it is appropriate in the context of soundness and the consultation processes that have taken place so far.

We also have concerns as to how the Green Belt review strategy set out at Policy H3 and in the Local Development Scheme integrates with other policies in the SCS and feel that Green Belt review should be more explicit throughout the SCS. As it currently stands there is a potential conflict with national policies and limited justification for the Green belt strategy. We note that in Policy H3, which indicates the need for Green Belt land review, the advice is limited and unclear. In fact Policy H3 only pays lip service to the need for a Green Belt review and provides, at best, loose advice in this regard. It says that prior to 2021 Green Belt will be safeguarded save for the releases noted under Policy H2. Policy H3 then goes on to talk about land release for development after 2021 but no time period is set out to provide a framework for any Green Belt review in this latter period. In our view Policy H3 and Policy GB1/H2 should explain fully the need for a Green Belt review and that such a review should take place for a defined period. That such a review has not taken place in advance of the SCS is a serious matter for the Inspector to consider in the context of soundness. That said, it is considered that any review of Green Belt should have regard to a period beyond 2021 as indicated by draft Policy H3. Paragraph 1.9 of the East of England Plan explains "this RSS covers the period to 2021 but sets a vision, objectives and core strategy for the longer term". 2026 is therefore considered a minimum suitable period that any Green Belt review must have regard to in order to meet the 5 year land supply requirements in PPS3 for the period after 2021. However, Policy SS7 of the East of England Plan talks about Green Belt reviews up to 2031. In view of this and the need to explore the circumstances of Rochford - that existing settlements cannot contain future housing growth; that Green Belt is necessary to provide housing; and that these provide exceptional reasons to vary the Green Belt locally (paragraph 2.6 to 2.7 of PPG2) the policies and strategy for the SCS should identify a Green Belt review covering the period to 2031 and set out why a review is necessary. Not to do so is unsound for justification and effectiveness reasons.

Policy H4 - Affordable Housing

As currently drafted we feel that the policy is not concise enough and that the policy does not reflect current guidance. The phrase 'at least' would indicate that in most cases affordable housing above 35% will be sought. Our understanding is that the 35% figure is recommended in the SHMA and that to provide a policy framework which seeks to go beyond that figure would potentially be unworkable as many sites could not financially bare the burden of over a third of the net developable area not yielding a value. The policy should be redrafted so that "a target of 35% affordable housing shall be provided on all developments of 15 or more units..."

The last policy paragraph provides some scope to relax this policy, if there are clear site constraints that make on site provision impossible. The policy, though, is not particularly clear on what would constitute exceptional circumstances. For example, physical site constraints, which unusually raise development costs, would be one such reason and this should be specified. There may be other reasons including the nature of housing needs in the part of the District the site is located which justify affordable housing below the 35% target. Design reasons may also have a bearing on how provision is made and in what form, particularly if the site is in an historic area where design might override housing need argument. It is therefore recommended that the policy expand on the type of circumstances where affordable housing may be relaxed and the type of information that will be sought of applicant's who have a need to invoke this part of the policy.

Policy H5

In support of the policy, it is advantageous that no percentages requiring a specific mix are included. This flexibility will enable developers and the Council to respond directly to changing circumstances in the local housing market. In the past some authorities have set out a percentage for the type of housing they require only to find that after a few years of strict implementation there is an oversupply of property of that type and no flexibility in the policy to address the problem.

Policy ED2 - London Southend Airport

It is considered that to grow non aviation related employment at a location north of Southend Airport where sustainable access from the rest of Rochford District requires careful consideration. Most Airports are serviced by aviation related employment development and as such a location close to the airport is sensible and sustainable. However, for surface access reasons it would be inappropriate to encourage travel from Rochford's main settlements to what essentially

Core Strategy Submission Document

16920 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

would be a rural location for general employment uses. Whilst sustainable access would be improved by a railway station and better bus links, there is no evidence to suggest that a sustainable surface access strategy for non related employment development at the Airport can be achieved. Paragraph 11.22 explains the critical importance of a railway station to the delivery of the strategy yet the Transport Chapter and Implementation Chapter provide neither a policy nor an assessment of deliverability. It is also notable that the South Essex Rapid Transit Policy T4, as set out at paragraph 10.16, notes that Rochford is not proposed to be served but may be served in future phases. This uncertainty is no way to plan for a major employment land supply strategy in the District. In relation to PPS12, the ability to deliver sustainable green field employment sites away from the top tier settlements of Hockley/Hawkwell, Rochford and Rayleigh is unsound.

Policy ED3

We fully support the first sentence of the Policy and note the apparent contradiction with the statements in Policy H1 and elsewhere which seeks to develop on alternative uses at industrial estates such as Eldon Way.

This contradiction is evidence in the second paragraph of Policy ED3. In our representations on Policy H1 we have explained why it is not sound to diminish the employment stock at Eldon Way and the importance of maintaining a dominance of employment type uses at this estate. These arguments are not repeated here.

We note the sentiments of the third paragraph and in accordance with our representations elsewhere are of the view that this sentence should be revised to explain that Eldon Way will accommodate principally employment type uses. As noted elsewhere uses which are an alternative to employment would diminish this highly sustainable employment site and this is unsound when assessed against National Policy.

Policy ED4 - Future Employment Allocations

In part, the de-allocation strategy is not supported as it is considered unsound when set against sustainability criteria. In relation to the Eldon Way Industrial Estate it is considered critical to the ongoing sustainability of this settlement that employment uses are maintained at this location. It is close to the railway station, bus routes and local residential areas from which the opportunity exists for employees to walk or cycle to work. Its location adjacent to the Town Centre offers opportunity for some retail and leisure development to complement the centre and to maintain a supporting function. These sustainable benefits would not occur with the deallocation of Eldon Way or the significant erosion of its employment floorspace. Whilst redevelopment of the employment site to achieve new employment is supported, the dominant land use should continue to be employment use. As a consequence, the 18ha of land required for employment in this policy is considered to be excessive and the policy should be reviewed to explain that redevelopment of existing employment sites for primarily new employment development will be encouraged.

Policy T4

It is noted that the South Essex Rapid Transit policy, as elaborated upon at paragraph 10.16 notes that Rochford is not served but may be served in future phases. This uncertainty is contrary to the delivery principles of soundness and directly puts at issue the employment land supply strategy in the District which is founded on sustainable access to new sites. In relation to PPS12, the ability to deliver sustainable green field employment sites away from the top tier settlements of Hockley, Rochford and Rayleigh is unsound.

Appendix H1, CTL1 - Infrastructure

It is recognised that necessary infrastructure provision is an important part of creating a sustainable development and in that context appendix H1 is supported. The supporting text notes that the table at Appendix H1 is not exhaustive and in that context it is very important that the framework properly distinguishes between what should be provided as part of new development schemes and what shouldn't. It is therefore essential that the framework acknowledges the importance of Circular 05/05 and the tests which say that provision of infrastructure and/or contributions should be:

- * Relevant to planning
- * Necessary to make the proposed development acceptable in planning terms
- * Directly related to the proposed development
- * Fairly and reasonably related in scale and kind to the proposed development
- * Reasonable in all other respects

As is made clear (Paragraph B9 of Circular 5/05) contributions should not be used to make good existing deficiencies in infrastructure provision. Nor are they to be used to secure contributions to the achievement of wider planning objectives that are not necessary for consent to be granted. In that context the Core Strategy should set this out as its policy framework.

Policy GB1 - Green Belt

Core Strategy Submission Document

16920 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

The objectives of this policy are supported, although as noted in other representations the SCS is unsound as it does not meet the tests in relation to justification, compliance with national policy or effectiveness of strategy.

Policy GB1 mentions the objective to allocate the minimum amount of Green Belt land necessary. The policy should link to the requirements of PPG2 and RSS which are discussed in relation to the representations on Policy H2 and H3. The policy should set out a timeframe for the review and why Rochford requires a Green Belt review (what the exceptional circumstances are in this District that justify a review of local boundaries. The policy should be amended to set out a 2031 time frame and this may require the SCS to have an extended life span beyond 2021.

We would recommend the deletion of the word character since Green Belt designation is not related to landscape character as currently drafted. For clarity we would also recommend that the Policy or its supporting text explain that a Green Belt review will take place in support of an allocations document (paragraph 6.6) in order to identify an appropriate new boundary. This is particularly necessary given the commitment to a Green belt review in the adopted Local Development Scheme.

Policy CLT1 - Planning Obligations and Standard Charges

In view of the need to test fully the basis on which standard charges are based it is important that any document produced is in a development plan document that enables an examination in public. The policy should explain this in order that when the document is produced it accords with Policy and is based on sound evidence.

ENV9 - Code for Sustainable Homes

Object. The advice from the Department of Communities and Local Government is that the new requirement to have a rating against the Code does not make it mandatory to build a Code home or to have each new home assessed against the Code. It does however mean that all buyers of new homes be given clear information about the sustainability of the new home. A house builder can do this in one of two ways:

- they can choose to build a Code home, have that home assessed against the Code and provide the home buyer with a Code certificate stating the star rating the home has achieved
- or, they can choose to build to current building regulations standards, not to pay for an assessment and instead download a nil-rated certificate of non-assessment (also referred to as a nil-rating) to provide to the home buyer.

As such the Rochford policy requirement that coding 3 be achieved by 2010 and Code 6 by 2013 is out of step with Government advice. The policy wording should explain that it is just the coding that is a requirement of new homes and not necessarily that new homes should be constructed to achieve a standard.

The current Government objectives are for the code to be introduced over a reasonable period with development to be code 3 by 2010, code level 4 by 2013 and code level 5 by 2016. In this regard the policy, as drafted, seeks to achieve code 6 by 2013 and consequently compresses the code requirements into a shorter time scale with the costs associated expected to be subsumed within the housing market through higher prices. This is not a realistic strategy for the delivery of sustainable homes and we consider that the policy should be revised to extend the period of compliance but to also make it more flexible based on local circumstances.

Research undertaken on behalf of the Housing Corporation and English Partnerships, published in February 2007 'A cost review of the code for sustainable homes' reveals that code 6 is unlikely to be unattainable given existing technologies and that achieving code 5 could result in a 12% to 20% increase in costs that would have to be passed onto the consumer. Given the variability of the housing market with peaks and troughs, it is unlikely that the housing market would be able to subsume this level of price increase.

The code system policy as currently drafted does not have regard to site circumstances and so many of the requirements could be difficult to meet. For example, micro electricity generation on site may be difficult to achieve where local circumstances deter the capture of wind or solar power. If more expensive technologies are required to generate power than is the norm then costs will rise. There may be other competing reasons why designs cannot include certain sustainability measures if housing sites are in sensitive landscape and historic locations. Alternatively there may be significant development costs associated with site specific circumstances and so viability of the site's development becomes a valid consideration. By insisting on the code for sustainable homes other policy objectives such as affordable housing at particular rates and other contributions may need to be reconsidered. Consequently, we are of the view that this policy should be drafted in a manner which enables site specific circumstances to be taken into account. As noted above the Government explains that the code is a certification requirement and does not necessarily mean that buildings are constructed in accordance with a code level.

It is also important to note that it is not the purpose of planning legislation to duplicate other legislation. In this regard, the policy should accept that the Building Regulations will be the main vehicle for implementing this policy and that unless the coding requires external development then there will be no need to specify what is to be carried out in a planning application.

Core Strategy Submission Document

O - 16920 - 10009 - Policy H3 - Extension to residential envelopes post-2021 - i, ii

16920 Object

CHAPTER 4 Policy H3 - Extension to residential envelopes post-2021

Summary: Policy H3

In the Preferred Options Core Strategy 2008 more locations were identified for housing growth in the post 2021 phase. Whilst it is our view that land south of Hockley/Hawkwell should benefit from a greater number of dwellings than the 175 currently identified (330) in order to make the strategy effective. We are concerned at the significant change in strategy between the Preferred Option Core Strategy and the Submission version, which has significantly less housing growth on green field sites. This change in strategy is so significant that we would question whether it is appropriate in the context of soundness and the consultation processes that have taken place so far.

We also have concerns as to how the Green Belt review strategy set out at Policy H3 and in the Local Development Scheme integrates with other policies in the SCS and feel that Green Belt review should be more explicit throughout the SCS. As it currently stands there is a potential conflict with national policies and limited justification for the Green belt strategy. We note that in Policy H3, which indicates the need for Green Belt land review, the advice is limited and unclear. In fact Policy H3 only pays lip service to the need for a Green Belt review and provides, at best, loose advice in this regard. It says that prior to 2021 Green Belt will be safeguarded save for the releases noted under Policy H2. Policy H3 then goes on to talk about land release for development after 2021 but no time period is set out to provide a framework for any Green Belt review in this latter period. In our view Policy H3 and Policy GB1/H2 should explain fully the need for a Green Belt review and that such a review should take place for a defined period. That such a review has not taken place in advance of the SCS is a serious matter for the Inspector to consider in the context of soundness. That said, it is considered that any review of Green Belt should have regard to a period beyond 2021 as indicated by draft Policy H3. Paragraph 1.9 of the East of England Plan explains "this RSS covers the period to 2021 but sets a vision, objectives and core strategy for the longer term". 2026 is therefore considered a minimum suitable period that any Green Belt review must have regard to in order to meet the 5 year land supply requirements in PPS3 for the period after 2021. However, Policy SS7 of the East of England Plan talks about Green Belt reviews up to 2031. In view of this and the need to explore the circumstances of Rochford - that existing settlements cannot contain future housing growth; that Green Belt is necessary to provide housing; and that these provide exceptional reasons to vary the Green Belt locally (paragraph 2.6 to 2.7 of PPG2) the policies and strategy for the SCS should identify a Green Belt review covering the period to 2031 and set out why a review is necessary. Not to do so is unsound for justification and effectiveness reasons.

Full Text: Representations on behalf of Fairview New Homes

1. We are instructed by our client, Fairview New Homes, to submit comments on the published Core Strategy Submission Document. For ease specific reference has been made in accordance with the paragraph and policy numbers as contained in the published document. We would like the opportunity to represent our Client at the forthcoming Examination of the Core Strategy DPD and would be grateful for confirmation that this is possible.

2. Fairview New Homes have an interest in a parcel of land to the South West of Rayleigh Town Centre, as indicated on the attached site location plan. This land was previously identified in the Core Strategy Preferred Options documents to provide an urban extension to the south west of Rayleigh. This option has now been withdrawn in the Core Strategy Submission document and it is on this basis these representations are provided to the Council.

□

3. The Submission Core Strategy has been considered against the requirements set out at Paragraph 4.36 of PPS12 requiring core strategies to be justifiable and effective in order to be found sound, as follows:

Justified:

- i. Founded on a robust and credible evidence base
- ii. The most appropriate strategy when considered against the reasonable alternatives

Effective:

- i. Deliverable - the Core Strategy should show how the vision, objectives and strategy for the area will be delivered and by whom, and when, including who is responsible for implementing different elements of the strategy and when
- ii. Flexible - a strategy is unlikely to be effective if it cannot deal with changing circumstances. Plans should show how they will handle contingencies.
- iii. Able to be monitored - monitoring is essential for an effective strategy and will provide the basis on which the contingency plans within the strategy would be triggered.

4. To summarise our comments, Fairview New Homes strongly object to the Core Strategy as is currently presented on the basis the document is currently unsound for a number of reasons:

â€¢ The lack of robust and credible evidence base

â€¢ Failure to clearly discount reasonable alternatives

â€¢ The effectiveness of the plan is also considered to be flawed and the Council's approach to deliverability and flexibility is questioned.

5. Fundamentally, we question the soundness of the Core Strategy due to the lack of available evidence to support the choices made by the Council. In particular, there is a strong reliance on the findings of the 2009 Strategic Housing Land Availability Assessment (SHLAA) although it is understood this document is not due to be published for consideration alongside the Core Strategy. We, therefore, reserve the right to submit additional comments to the Core Strategy consultation following the publication of the SHLAA.

6. The 2009 SHLAA is clearly listed at Paragraph 1.29 of the submission Core Strategy as one of the evidence base documents the Council have drawn upon when drafting the Core Strategy. The documents listed are all considered to have played an important role in informing the Core Strategy. PPS12 also recognises at Paragraph 4.37 the importance of demonstrating how choices made in the plan are backed up by factual evidence identified in evidence base documents.

7. As a starting point it is important to state it is Fairview New Homes greatest concern there is no background provided within the Core Strategy document, or indeed any of the available evidence base documents, identifying why the Local Planning Authority has chosen to remove some of the sites previously proposed for housing development. In addition, there is also no justification as to why the retained urban extension sites are more suitable than those removed from the draft plan.

8. The following provides specific comments in response to the relevant areas of the Core Strategy.

Housing

9. It is stated at Paragraphs 4.10-4.12 that the Council have adopted a balanced approach when locating new housing

16614 Object

CHAPTER 4 Affordable Housing, 4.30

between higher tier settlements and lower tier settlements. Although there is no detail provided as to how the Council intend on implementing this balanced approach or how the strategic allocation of housing contributes to the balance required. Our Client cannot support this approach until further detail is understood as to the proportion of housing being allocated to each settlement tier.

10. The proposed distribution of housing development during the plan period does not appear to be proportionately allocated between the various settlement tiers. We would argue that development should be distributed proportionately in line with the size of the settlement in order to benefit for available services and facilities. Rayleigh recognised as having best access to services within the district at Paragraph 2.68 of the Core Strategy. On this basis it is considered the development should primarily be directed to Rayleigh with a proportionate level of housing to the remaining settlements in the District.

Policy H1 - The efficient use of land for housing

11. In general the use of residential extensions to meet the remaining housing requirement that cannot be delivered through the redevelopment of appropriate previously developed land is supported by Fairview New Homes.

12. It is understood there is a need to prioritise use of brownfield land in line with national policy requirements but this needs to be a carefully balanced and realistic approach in identifying appropriate urban extensions to accommodate the majority of the District's housing, as identified in the table at Paragraph 4.6 and later at Paragraph 4.15.

13. Policy H1 sets out that the Council will seek the redevelopment of Rawreth Lane Industrial Estate, Foundry Industrial Estate, Stambridge Mills and Star Lane Industrial Estate. Without sight of the 2009 SHLAA it is not possible to understand whether the Council's choice to release employment land for housing is appropriate and Fairview New Homes cannot, therefore, support this element of Policy H1. This objection is further amplified by the fact additional employment land is required but is yet to be identified.

Policy H2 - Extensions to residential envelopes and phasing

14. The Council's intention to provide a balanced strategy for housing provision is mentioned again at Paragraph 4.18. The comments made at Paragraphs 9 and 10 above are also relevant in this respect.

15. In comparing the Preferred Options Core Strategy Document and Submission Core Strategy Document there is a significant reduction in the number of housing units being provided in urban extensions pre 2015, from 1450 dwellings to 775. From discussions with the Local Planning Authority it is understood the Council are seeking to provide the District's housing requirements by increased development densities. From the evidence available in the Submission Core Strategy and summary of SHLAA sites a number of the sites identified as urban extensions have in fact been allocated a reduced number of dwellings, including the land to the north of London Road, Rayleigh. We would, therefore, consider the approach taken by the Local Planning Authority to provide the required level of housing is untenable and unjustified.

16. In discounting preferred options PPS12 makes clear at Paragraph 4.38 the requirement for Local Planning Authorities to consider and evaluate reasonable alternatives. As set out above, the choices the Council have pursued have not been substantiated and without the consideration of reasonable alternatives the Core Strategy cannot be considered justified and therefore unsound.

17. However, this is our opinion based only on discussions with the Local Planning Authority rather than a thorough evidence base and we will consider the evidence in detail when it become available and provide further comment.

18. Paragraph 4.19 of the draft Core Strategy details the Council's primary factors in determining the location of future urban extensions. It is presumed the Council have assessed each of the proposed urban extension sites against the following criteria and that this information is contained within the SHLAA, although we have not been provided with any evidence of this to assess. It can be demonstrated that the land identified on the attached site location plan meets all of the requirements set out below.

â€¢ The proximity and relationship to existing centres, facilities, services

â€¢ The availability of infrastructure and/or the potential for additional infrastructure to be provided for development in such areas

â€¢ The potential to reduce private car dependency

â€¢ The potential to avoid areas of constraint (such as areas at risk of flooding, sites of ecological importance, public safety zone etc)

â€¢ The historical, agricultural and ecological value of land

â€¢ The impact on highway network (including availability and impact on existing network, as well as potential for improvements to be delivered)

â€¢ The relationship of development locations to the District's area of employment growth

â€¢ The potential to create a defensible Green Belt boundary

â€¢ The avoidance of coalescence with neighbouring settlements

19. In summary, Fairview's land is sustainably located in particularly close proximity to Rayleigh Town Centre and train station. In addition, the location of the land provides a natural extension and rounding of settlement boundary. An extension to Rayleigh in this location offers no opportunity for coalescence with neighbouring settlements nor does it

16614 Object

CHAPTER 4 Affordable Housing, 4.30

constitute urban sprawl.

Policy H2 - Extensions to residential envelopes and phasing

20. Although it is stated a flexible approach to the timings of the release of land will be maintain no explanation is provided as to why some sites are considered suitable for development pre 2015 and others post 2015. Paragraph 4.22 elaborates further to state a number of factors have been considered when determining the phasing of strategic housing sites although this information is not clearly available to assess.

21. As stated above the principle of releasing certain areas of greenbelt land is considered the best approach to meeting the Council's housing provision requirements. However, Fairview New Homes object to the omission of the land to the South West of Rayleigh for housing development as previously identified in the Core Strategy Preferred Options document. The site identified on the attached site location plan has been assessed against the Council's criteria, as set out at Paragraph 18 above and each requirement can be met. Without any clear explanation as to why this site has been discounted and the only other strategic housing site identified in Rayleigh is located further away from Rayleigh Town Centre and the associated services and facilities including the train station, Fairview New Homes object to Policy H2.

22. As considered at the outset of these representations the draft Core Strategy cannot be considered robust, and therefore sound, without clear justification and evidence base.

Policy H3 - Extension to residential envelopes post-2021

23. Policy H3 is supported on the basis that the release of greenbelt land is required for housing and this is the most appropriate approach to meet the Council's housing requirements, as set out at Paragraph 21 above.

24. However, it is unclear why some of the sites previously identified for housing development pre 2015 up until 2021 in the Preferred Options Core Strategy document have now been allocated for development post 2021, such as South East Ashingdon. It is stated at Paragraph 4.24 of the Submission Core Strategy document those areas identified for post 2021 development may not be immediately deliverable. However, there is no information available to understand why these sites are now no longer considered suitable for pre 2015 development as they were in December 2008. As a result, Fairview New Homes consider Policy H3 to be unjustified and therefore unsound.

Affordable Housing

25. The acute need for additional affordable housing is recognised at Paragraph 4.30. It is unclear from the draft Core Strategy document exactly how much affordable housing is required in the District in the plan period.

26. However, taking the starting point as set out at Paragraph 4.30 that the Thames Gateway South Essex Strategic Housing Market Assessment requires 131 net additional affordable dwellings per year which constitutes 52% of the District's overall annual housing target. In order to achieve this target using the Council's proposed policy requirement that new housing developments are to provide 35% affordable housing, 375 new dwellings would need to be developed each year. This calculation does not account for those developments with fewer than 15 dwellings which have no requirement to provide affordable housing or developments which cannot viably afford to provide non-market housing.

27. An annual requirement of 250 dwellings is identified at Paragraph 4.2 of the Core Strategy which would leave a significant short fall of affordable housing and act to compound the current situation. The approach taken by the Council ultimately accepts there will always be a shortfall in affordable housing provision and does not seek to redress this. We do not, therefore, consider this to be a robust or justified approach to achieving affordable housing in the District.

28. It is, therefore, considered in order to meet the District's affordable housing requirement additional housing land should be identified in order to ensure a wholesale increase in housing provision to address the Council's shortfall in affordable housing and meet the targets set for the plan period. The most appropriate and effective method by which to secure affordable housing provision is through developing large sites that are viably able to offer affordable housing units.

29. During the consultation of the submission Core Strategy the Council's Housing Strategy (2009) was not available and we reserve the right to make further comment on this document following the publication of this evidence.

The Green Belt

30. It is fully accepted by the Council that the Green Belt boundary is currently too tightly drawn and the release of some Green Belt land is necessary to meet the District's development requirements. However, it needs to be demonstrated that the areas of Green Belt land to be lost are justified and located in the most appropriate area and that areas of release land do not undermine the principle of the Green Belt.

31. It is understood from Paragraph 6.7 of the Submission Core Strategy the Council will seek to examine the degree to which current Green Belt land is helping to achieve the purposes of the Green Belt when considering reallocating land. However, areas of Green Belt are proposed to be reallocated for urban extensions prior to this research being

Core Strategy Submission Document

O - 16614 - 5219 - Affordable Housing, 4.30 - i, ii

16614 Object

CHAPTER 4 Affordable Housing, 4.30

undertaken.

32. Fairview New Homes fully support the justified retention of the areas of Green Belt where appropriate and the release of Green Belt land where needed. However, at present the proposed Housing policies and Green Belt policies are not coherent and the reallocation of certain areas of Green Belt is not based on a credible evidence base.

Environmental Issues

Policy ENV4 - Sustainable Drainage Systems (SUDS)

33. Fairview New Homes would like to support the flexibility contained within Policy ENV4 which recognises it is not always viably possible to incorporate SUDS in all developments.

Policy ENV8 - On Site Renewable and Low Carbon Energy Generation

34. We would also like to support Policy ENV8 on the same basis as Policy ENV4 in that it is important that the production of energy from renewable or low carbon sources is only required where it is viably possible so as not to result in developments not coming forward.

Transport

Policy T8 - Parking Standards

35. Fairview New Homes object to Policy T8 as it is currently contrary to National Policy requirements as set out in PPG13 which contains maximum parking standards. Indeed, this is recognised at Paragraph 10.27 of the Submission Core Strategy document. Enforcing minimum parking standards is not consistent with local or national sustainability aims and should not be an approach pursued by the Council.

Summary:

Affordable Housing

25. The acute need for additional affordable housing is recognised at Paragraph 4.30. It is unclear from the draft Core Strategy document exactly how much affordable housing is required in the District in the plan period.

26. However, taking the starting point as set out at Paragraph 4.30 that the Thames Gateway South Essex Strategic Housing Market Assessment requires 131 net additional affordable dwellings per year which constitutes 52% of the District's overall annual housing target. In order to achieve this target using the Council's proposed policy requirement that new housing developments are to provide 35% affordable housing, 375 new dwellings would need to be developed each year. This calculation does not account for those developments with fewer than 15 dwellings which have no requirement to provide affordable housing or developments which cannot viably afford to provide non-market housing.

27. An annual requirement of 250 dwellings is identified at Paragraph 4.2 of the Core Strategy which would leave a significant shortfall of affordable housing and act to compound the current situation. The approach taken by the Council ultimately accepts there will always be a shortfall in affordable housing provision and does not seek to redress this. We do not, therefore, consider this to be a robust or justified approach to achieving affordable housing in the District.

28. It is, therefore, considered in order to meet the District's affordable housing requirement additional housing land should be identified in order to ensure a wholesale increase in housing provision to address the Council's shortfall in affordable housing and meet the targets set for the plan period. The most appropriate and effective method by which to secure affordable housing provision is through developing large sites that are viably able to offer affordable housing units.

29. During the consultation of the submission Core Strategy the Council's Housing Strategy (2009) was not available and we reserve the right to make further comment on this document following the publication of this evidence.

Countryside Properties (Southern) Ltd
Countryside House
The Drive
Brentwood
Essex
CM13 3AT
01277260000

Full Text: Unsound: (i) not consistent with national policy (ii) not justified: not found on a robust evidence base, and (iii) not effective; not deliverable/flexible.

We are pleased to see that the policy includes the ability for the possible relaxation of the proposed minimum percentage requirements for affordable housing where a viability review/economic viability calculations justifies this. This is particularly pertinent in the current economic climate. Affordable housing is just one of potentially a large range of planning obligation or infrastructure requirements for larger development sites, and the combined cost implications of such requirements need to be taken into account to ensure that a site does not become unviable.

However, national planning policy set out in PPS 3 paragraph 29 requires that local authorities take account of economic viability when setting affordable housing targets in their Local development documents. The target of at least 35% affordable housing for developments of 15 or more units must therefore be based upon/justified by a robust and up-to date local viability appraisal undertaken by the council.

The council do not seem to have undertaken its own Affordable Housing Economic Viability Assessment. It seems that you are relying on the East of England figure which in itself suggests no understanding of viability issues locally, and The Thames Gateway South Essex Strategic Housing market Assessment which is not a viability appraisal document (see paragraph 4.30 of the Core Strategy).

With no viability assessment the policy is unsound and does not comply with the requirements of PPS 3. An Affordable Housing Economic Viability Assessment must be undertaken to inform the appropriate percentage requirement of affordable housing.

Furthermore, the wording on viability in the policy should be objective, and we submit that it should be amended so that subjective wording is deleted.

The following amendments should be made:

â€¢ Delete at the beginning of the policy the words "at least"

â€¢ Delete within the first sentence of the third paragraph the word "highly", and in the same sentence (third line of the paragraph), the word "definitely"

â€¢ Delete the words "rendering the site undeliverable" from the same sentence (4th line of that paragraph)

We also consider that the balance of affordable housing specified as "80% social housing and 20% intermediate" is too high (no shared ownership), but that in any case, should not be specified in this policy. Affordable housing need changes over time. Therefore we suggest that the policy should state that the make up of affordable housing should be determined at the time at which a detailed masterplan or planning application is considered for a site (certainly for larger sites), based on identified affordable housing needs at that time.

We would also comment that the insistence on a minimum level of affordable housing for a site should not be used to hold up delivery of those housing requirements set within the East of England Plan (the importance of delivering RSS housing requirements often seems to get forgotten in debates about affordable housing percentages). Housing delivery is an equally important national issue.

Summary: 1. An Affordable Housing Economic Viability Assessment must be undertaken to inform the appropriate percentage requirement of affordable housing.

2. Wording amendments are suggested

3. We suggest that the policy be re worded regarding the type of affordable housing sought, and should state that the make up of affordable housing will be determined at the time at which a detailed masterplan or planning application is considered for a site (certainly for larger sites), based on identified affordable housing needs at that time.

Change to Plan 1. An Affordable Housing Economic Viability Assessment must be undertaken to inform the appropriate percentage requirement of affordable housing. Once undertaken, the percentage of affordable housing required for developments should be reviewed and amended as appropriate.

2. The following amendments should be made to the wording of the policy:

Note: The composite reference number in the box at the top of the page is made up of the following information: Object/Support - Representation Number - Respondent Number - Plan Reference - Soundness Tests (if applicable).

Full Text:

It is noted that on qualifying developments the policy seeks that affordable units are 'pepper potted' throughout the development. However, it is recommended that on such developments the affordable housing (both social rented and intermitted tenure) are clustered in groups of 6 to 10 units throughout the development in order to aid with ongoing management and maintenance undertaken by RSL or other body.

With regards the need for affordable housing the Council has set a target that 35% of all new housing should be affordable. Whilst, the policy acknowledges that as a result of the current market conditions, it may not be viable to achieve 35% affordable housing on all sites, therefore, this target may be relaxed where it can be demonstrated that this target would undermine the viability of a particular development; as worded the test to seek a relaxation to the 35% is too restrictive.

Amend second sentence of first paragraph as follows:

....These affordable dwellings shall be tenure-blend and well integrated into the layout of the new residential development and clustered in groups of 6 to 10 units throughout the development in order to aid with on going management and maintenance undertaken by RSL or other body.

Amend first sentence of second paragraph as follows:

The requirement for the provision of affordable housing will only be relaxed in circumstances, where it can be demonstrated, for example, where constraints make the on-site provision impossible, or where it can be demonstrated that the 35% provision will be economically unviable, rendering the site undeliverable...

Summary:

It is noted that on qualifying developments the policy seeks that affordable units are 'pepper potted' throughout the development. However, it is recommended that on such developments the affordable housing (both social rented and intermitted tenure) are clustered in groups of 6 to 10 units throughout the development in order to aid with ongoing management and maintenance undertaken by RSL or other body.

With regards the need for affordable housing the Council has set a target that 35% of all new housing should be affordable. Whilst, the policy acknowledges that as a result of the current market conditions, it may not be viable to achieve 35% affordable housing on all sites, therefore, this target may be relaxed where it can be demonstrated that this target would undermine the viability of a particular development; as worded the test to seek a relaxation to the 35% is too restrictive.

Full Text: The policy is unsound in that the 35% affordable housing target does not appear to be supported by an assessment of viability as required by the Blyth Valley BC - v - Persimmon Homes (North East) Ltd (2008) High Court case.

The policy can only be made sound by undertaking a viability assessment of affordable housing levels in the District.

It is considered that our participation at the oral part of the public examination would assist the Inspector for two main reasons

- Sellwood Planning has a detailed knowledge of the Rochford area, appeared at the last Local Plan Inquiry and was a participant at the RSS public examination. This direct knowledge of the local area and the statutory Development Plan may be of assistance to the Inspector

- Sellwood Planning has experience in promoting major schemes through Core Strategies (eg. 7,000 dwellings in Ashford, 5,750 dwellings in Dover, 2,500 dwellings in Horsham and 1,200 dwellings in Newmarket) and the emerging body of evidence of what constitutes a sound Core Strategy and what is unsound. Our experience indicates that, in a number of respects, the submitted Core Strategy is unsound in its present form.

Summary: The policy is unsound in that the 35% affordable housing target does not appear to be supported by an assessment of viability as required by the Blyth Valley BC - v - Persimmon Homes (North East) Ltd (2008) High Court case.

Change to Plan The policy can only be made sound by undertaking a viability assessment of affordable housing levels in the District.

1.0 Instruction and Introduction

1.1 Charles Planning Associates Limited (Chartered Town Planners) is Instructed by Swan Hill Homes Limited (Swan Hill) to prepare and submit representations on their behalf in respect of the Rochford District Local Development Framework: Core Strategy Submission (September 2009) Development Plan Document.

1.2 The comments refer to the relevant sections and policy designations in the Submission document, as appropriate.

1.3 The comments set out in this submission are intended to assist the District Council in taking forward its Local Development Framework. It is our intention to continue to be involved in the LDF preparation process and we look forward to the opportunity to comment further at the Examination to the Core Strategy.

1.4 If you have any queries regarding the content of this submission then please do not hesitate to contact:

Peter Kneen BSc (Hons) MSc MRTPI
Planner

2.0 Housing:

Policy H1 - The Efficient Use of Land for Housing

2.1 Swan Hill recognises the importance of seeking to concentrate new developments mainly in the existing urban areas, on previously developed land where possible, particularly in view of the Government seeking to ensure 60% of all such new developments are on previously development land (PDL).

2.2 However, given the character of the District, and the strategic housing requirement of the East of England Plan, Swan Hill supports the approach that the Council must also make provision for additional development on the edge of existing settlements on greenfield sites, particularly in the most sustainable locations. As such, Swan Hill supports that where feasible, the redevelopment of existing employment sites for residential/employment purposes can make a contribution towards the strategic housing requirement, provided that sufficient additional employment land is brought forward to ensure the stability of employment levels in the District, and to ensure employment growth meets the East of England Plan requirements.

2.3 Swan Hill considers that Policy H1 should include consideration that new extensions to existing settlements have regard to their potential impact on the wider characteristics and openness objectives of the Green Belt.

Policy H2 - Extensions to Residential Envelopes and Phasing

2.4 Swan Hill generally supports the approach taken by the Council in this policy. As set out above, Swan Hill consider the Council's acknowledgment that housing requirements should be met through the allocation of land on the edge of the existing settlements is the most suitable way forward to meeting the Council's strategic housing requirement and complies with the advice in PPS3.

2.5 The need for suitable greenfield urban extensions represents the best way forward for the Council to meet its strategic housing requirement, as set out in the East of England Plan. Swan Hill supports the recognition that the potential supply of alternative previously developed sites is limited, without detrimentally affecting the character of the District, and therefore the best way forward is the use of sustainable greenfield urban extensions to the existing settlements of the District.

2.6 However, Swan Hill consider that a fundamental consideration that the District Council should consider relates to the potential impact of the urban extensions on the Green Belt policy has been somewhat overlooked. The wider sustainability credentials of the settlements of the District should only be one of many key considerations for determining the level of expansion. In view of the proximity of Southend-on-Sea to all the main settlements of the District, and the influence this has on the likely location many people would travel for employment and leisure, sustainability of many of the settlements is not a key overarching factor, and greater weight should be placed on the potential impact on the openness of the Green Belt, as this cannot be remedied if development occurs in the wrong location.

2.7 As such, Swan Hill considers that determining the location of growth for the main settlements should be to identify

Core Strategy Submission Document

S - 16876 - 8329 - Policy H4 - Affordable Housing - None

16876 Support

CHAPTER 4 Policy H4 - Affordable Housing

those locations where the impact on the wider setting of the Green Belt can be minimised. Further justification for those general locations chosen should be identified in Policy H2. In this regard, Swan Hill has serious concerns regarding the removal of Land South West of Great Wakering as a viable option for the growth of the settlement. The development of this area of Great Wakering, in addition to the potential redevelopment of the Star Lane Industrial Estate could provide a more comprehensive development, whilst ensuring that the wider openness of the Green Belt is maintained. Land South West of Great Wakering is significantly better placed to limit the impact on the wider Green Belt than Land West of Great Wakering, and could contribute to the provision of an important amenity and wildlife site for the local community.

2.8 In addition, Swan Hill consider that the Council now has no reserve provision in the event that any of the existing employment sites set out in Policy H1 fail to come forward for development within the envisaged timescale. Further, Land West of Great Wakering has not been identified in the SHLAA as a deliverable site to help meet the strategic housing requirement, contrary to the requirement set out in PPS3.

2.9 As such, Swan Hill would support the provision of suitable sites which could be safeguarded for future development in the likelihood of a shortfall in supply.

Policy H3 - Extensions to Residential Envelopes Post 2021

2.10 As set out above, Swan Hill supports the overall approach the Council has taken towards the provision of sustainable urban extensions as a suitable means of meeting their strategic housing requirement. However, as set out for Policy H2 above, Swan Hill has serious concerns regarding the removal of several proposed sites set out in the October 2008 Preferred Options Core Strategy, without any guarantee of the ability to deliver those sites set out in Policy H1.

2.11 As also considered above, the inclusion of West of Great Wakering for 250 dwellings should not be included ahead of South West of Great Wakering, in view of the fact that the site is not identified in the SHLAA as available, suitable and achievable as required by PPS3, and thus is not supported by a robust and creditable evidence base for its inclusion as a strategic site for development.

2.12 Whilst Swan Hill acknowledge that alterations to Policy H1 has resulted in the removal of some locations for growth in Policy H3 (as set out in the Sustainability Appraisal), Swan Hill does not consider that the most appropriate locations have been chosen.

2.13 In addition to the matters raised above, the use of West of Great Wakering would also result in the loss of valuable agricultural land, which clearly in a Green Belt location, should be less suitable for development than other sites, such as South West of Great Wakering, which would have limited impact on the wider Green Belt policy, and not result in the loss of valuable agricultural land.

2.14 Finally, in respect of Policies H1, H2 and H3, all of the above comments are based on our interpretation of the Submission Version Core Strategy when compared to the October 2008 Version of the Core Strategy. Without the ability to undertake a detailed assessment of the Council's SHLAA, it is not possible to clarify the proposed Core Strategy position regarding the proposed direction of growth proposed for the settlements in the District. As such, Swan Hill reserves the right to make additional representations regarding the proposed Policies H1, H2 and H3 following the publication of the SHLAA in due course.

Policy H4 - Affordable Housing

2.15 In general terms, Swan Hill supports the approach taken by the Council towards the provision of affordable housing for new residential developments. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H5 - Dwelling Types

2.16 Swan Hill supports the policy provision of H5, and considers that the approach taken by the Council for this policy represents a suitably flexible alternative to stipulating percentages of dwelling mix, sought by some local authorities. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H6 - Lifetime Homes

2.17 In regard to this policy, Swan Hill objects to the Council's policy where all new dwellings should be provided to the Lifetime Homes Standard. Whilst it is acknowledged that the UK has an aging population, Swan Hill considers that seeking to provide Lifetime Homes on all sites is considered to be overly onerous for proposed developers, particularly when considering the requirement for all car parking spaces to be suitable for disabled users, which could result in more schemes becoming unviable. Therefore, the provision of a percentage of Lifetime Homes should be considered through negotiations with the Council at the planning application stage, and should be determined on a case-by-case basis.

3.0 Character of Place: Policy CP1 - Design

Core Strategy Submission Document

S - 16876 - 8329 - Policy H4 - Affordable Housing - None

16876 Support

CHAPTER 4 Policy H4 - Affordable Housing

3.1 The Town and Country Planning (General Development Procedure) Order 1995 (As Amended) makes the submission of a Design and Access Statement for most types of planning applications a Statutory requirement, and as such, the provision of a Design Brief represents a pre-requisite of all major planning applications.

3.2 Policy CP1 seeks to ensure the provision of good, high quality developments that reflect local characteristics and distinctiveness, this ideology is supported by Swan Hill.

4.0 The Green Belt:
Policy GB1 - Green Belt Protection

4.1 Following the amendments to the wording of the Policy since the October 2008 Preferred Options Core Strategy, Swan Hill is now generally supportive of Policy GB1 and its supporting text. However, as expressed above, it is important that where alterations to the Green Belt boundary occur as a result of the extension of the settlements to meet the strategic housing requirement, both the minimal amount of land is taken and where that land is taken for development, it represents the best available land which has a minimal impact of the wider openness characteristic of the Green Belt.

5.0 Environmental Issues:
Policy ENV3 - Flood Risk

5.1 Swan Hill generally supports the approach set out in Policy ENV3 regarding ensuring development accords with the sequential test of PPS25. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV4 - Sustainable Drainage Systems (SUDS)

5.2 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV4. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV8 - On-site Renewable and Low Carbon Energy Generation

5.3 Whilst Swan Hill recognises the importance of reducing carbon emissions, particularly in new housing developments, and the role this can play in reducing the nations overall Greenhouse emissions. As such Swan Hill is generally supportive of Policy ENV8. It is noted that Policy ENG1 of the East of England Plan sets out a threshold of developments comprising 10 or more dwellings. Swan Hill consider it important for the District Council to justify the reduction in the threshold level.

5.4 Further, no assessment of Policy ENV8 has been set out in the Sustainability Appraisal which justifies the change in threshold from that of Policy ENG1 of the RSS.

Policy ENV9 - Code for Sustainable Homes

5.5 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV9. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

6.0 Community Infrastructure, Leisure and Tourism:
Policy CLT1 - Planning Obligations and Standard Charges

6.1 Swan Hill generally supports the overall approach the Council has taken in Policy CLT1. It is considered Policy CLT1 sets out a degree of flexibility to ensure that all sites are considered on a site-by-site basis, assessing the individual merits of each planning application, in order to ensure the levels of contributions applicable meet the five tests of Circular 05/05. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policies CLT5 - Open Space;
CLT7 - Play Space;
CLT8 - Youth Facilities; and,
CLT10 - Playing Pitches

6.2 Swan Hill supports the need for new residential developments to incorporate a degree of new publicly accessible open space, children's play space, youth facilities and playing pitches, and as such, generally supports the policy approaches taken by the Council.

6.3 However, it is important that whilst the Council may seek to undertake an assessment of providing standard charges for new development, which, as set out in Policy CLT1, this should be based on thorough public consultation and consideration and sound justification. Swan Hill consider that within the provision of a standard charge, it is important that such provision allows for a degree of flexibility to ensure that each site is assessed individually and on its own merits. This is particularly important for those sites close to existing open spaces and facilities. As such, the levels of

Core Strategy Submission Document

S - 16876 - 8329 - Policy H4 - Affordable Housing - None

16876 Support

CHAPTER 4 Policy H4 - Affordable Housing

open space and recreation facilities required in the 'standard charge' should be based on an up-to-date PPG17 Open Space assessment, which should be used to form a key consideration in the levels of provision likely to be required in the standard charge system proposed.

7.0 Transport: Policy T1 - Highways

7.1 Swan Hill supports the overall objectives set out in Policy T1 requiring developments to be located and designed to reduce the reliance on the private car and to meet the infrastructure needs generated by development or seek to help achieve these needs is acceptable in principle.

7.2 Swan Hill recognises the importance of providing sufficient infrastructure provision to meet the requirements of development, and that where developments have insufficient consideration of impact on existing infrastructure, they should be considered unacceptable and contrary to National policy guidance. However, Swan Hill considers it important to emphasise that the developer's role should not be seen as a means to meet existing shortfalls in provision.

Policy T3 - Public Transport

7.3 Swan Hill is generally supportive of the policy approach set out in T3, however, as set out in paragraph 7.2 above, it is important that the District Council do not consider that it is the developer's responsibility to resolve existing shortfalls in provision of public transport, and any contribution towards additional public transportation provision should only be to mitigate against the additional level of demand likely from the development proposed.

Policy T5 - Cycling and Walking

7.4 Swan Hill supports the general approach to this policy, as Swan Hill recognises the importance of promoting the use of alternatives to the private car. The policy provision acknowledges the need to ensure relevant contributions in the event of additional travel demands generated by individual developments, whilst also setting out additional aspirations for the cycle network in the District.

7.5 As such, Swan Hill considers this policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy T8 - Parking Standards

7.6 The Council has recently (January 2007) adopted SPD on the requirements for parking standards, and as such, Swan Hill generally supports the policy approach chosen by the Council. As set out in the SPD, whilst Swan Hill generally supports the approach taken by the District Council towards setting residential parking standards, in that the Council has recognised that in the suburban areas, even with some access to public transport, the majority of residents will rely on the use of private cars. However, Swan Hill has concerns over the failure of the District Council to comply with the provisions of PPG13: Transport (2001) which sets out that Local Planning Authorities should not set minimum standards for car parking. Whilst it is acknowledged that PPS3 sets out provision for the consideration of local circumstances, it is considered that the Council has not justified this deviation from PPG13's maximum standard.

7.7 Whilst it is acknowledged that such justification may become apparent through the work currently being undertaken by Essex County Council, until such time, the District Council should only seek to apply the maximum standards indicated in PPG13. However, Swan Hill recommends that the District Council make provisions in the wording of the Policy to allow for changes in the event that future policy on car parking standards need to reflect the County standard, following the completion of the County Council review.

8.0 Economic Development: Policies ED3 - Existing Employment Land ED4 - Future Employment Allocations

8.1 In respect of Policies ED3 and ED4, Swan Hill notes that they have changed considerably since the October 2008 Preferred Options document, in that they are site specific regarding the location of the proposed redevelopment of existing employment sites. These four sites are also identified in Policy H1 - Efficient Use of Land, and in general, Swan Hill supports the approach to the redevelopment of these sites (where feasible) based on the assessments of the sites set out in this version of the Core Strategy.

8.2 However, Swan Hill has concerns that these policies might not be considered suitably sound given that insufficient opportunity has been allocated for consultation on their redevelopment. Without the SHLAA being publically available prior to the consultation on this Core Strategy, an insufficient evidence base has been provided to corroborate that these sites are neither suitable or deliverable to meet the test of soundness requirements.

Summary:

Policy H4 - Affordable Housing

2.15 In general terms, Swan Hill supports the approach taken by the Council towards the provision of affordable housing for new residential developments. The Policy accords with the advice of National Policy and is therefore

Representations on the Core Strategy
Submission Document, November 2009
On behalf of Barratts Eastern Counties

Introduction

The requirements of Core Strategies are enshrined in the 2004 Planning and Compensation Act, the Town & Country Planning (Local Development) England (Regulations) 2004 and the 2008 policy guidance in PPS12. The requirements of Coe Strategies are clear. And they are legal requirements. The Core Strategy must comply with the Local Development Scheme, Statement of Community Involvement and the Regulations. The Core Strategy must be subject to a sustainability appraisal, have regard to national guidance, conform generally with the Regional Spatial Strategy and have regard to any Sustainable Community Strategy. A Core strategy must be sound - justified, effective and consistent with national policy. The following representations therefore focus on these legal requirements.

HOUSING

Paragraph 4.6 - Evidence Base

To meet the soundness test Submission Core Strategies (SCS) must be justified, that is to say it must be founded on robust and credible evidence base and comprise the most appropriate strategy when considered against reasonable alternatives. The housing strategy in as far as it identifies a need for Green belt sites is sound, however, there are other elements which are unsound.

Paragraph 4.6 notes that the Strategic Housing Land Availability Assessment (SHLAA) has examined the supply of housing. It is presumed that the Table at paragraph 4.6 is the outcome of this examination. Whilst the SHLAA has some legitimacy in that it identifies various sites that are apparently available, we are concerned that because the SHLAA was only published in November 2009 it post dates the SCS. This implies that the SCS is driving the SHLAA exercise rather than the other way round. Whilst this may have no real practical effect on the outcome of the SCS and the identified need for Green Belt sites, the Inspector will be mindful of the advice in paragraphs 33 and 54 of PPS3 that SCS draw on the evidence in SHLAA. It may be that the SCS should explain how the evidence base has been used to justify the strategy.

PPS12 explains at paragraph 4.37 that Core Strategies are based on thorough evidence. Since the SHLAA has only recently been published it is considered that the SCS is unsound as it is not justifiable. This, together with other comments on the SCS, indicates that the process should be delayed to ensure that a more robust document is placed in front of the EiP Inspector.

Table at Paragraph 4.6 - Evidence base

From our review of the available evidence it would appear that the housing land supply is insufficient and that Green Belt release are required. From the wider strategy being promoted we note that some of the sites that the District Council consider to be 'appropriate' are likely to relate to existing employment areas. As set out elsewhere in our representations, we maintain severe reservations that the redevelopment of existing employment sites for alternative uses and particularly the Eldon Way Industrial Estate is unsustainable. We will make reference to the effectiveness of this strategy in relation to sustainability, whether it is justified in the context of National Policy and the deliverability of such a strategy elsewhere.

In particular, paragraph 11.32 of the SCS refers to existing employment land and sites within the UCS. It does not refer the SHLAA and as such it appears that an evidence base to support the re-use of employment land for residential is not reported in the SCS.

Having reviewed the 2008 Annual Monitoring Report, as we did when commenting on the 2008 Preferred Options Core Strategy, we maintain severe doubts as to the appropriateness of some of the previously developed sites identified as potential housing sites and their expected housing yield. Whilst we cannot at this stage ascertain whether the SHLAA

16921 Object

CHAPTER 4 Policy H4 - Affordable Housing

sites referred to in this table correlate with the Annual Monitoring Report and indeed the 2007 Urban Capacity Study, it is our view that there will be some commonality and so the reliance on these sites is likely to be at odds with Government Policy. We shall elaborate on this objection in relation to the specific housing policy below.

We note that the last two rows in the Table at paragraph 4.6 set out figures with and without Green Belt releases. The text to this section of the Core Strategy should, for reasons of clarity, explain that Green belt review will be necessary in order to deliver the required housing.

Paragraph 4.9

The table on page 40, which sets out the settlement tiers, is supported. Rayleigh, Rochford/Ashingdon, Hockley/Hawkwell are clearly the largest settlements in the District and they benefit from good employment, housing, leisure, community and public transport provision. These settlements are the most sustainable ones with the greatest mix of uses. Consequently, it is sensible that the Core Strategy identifies these as top tier settlements and is able to target them with growth accordingly. This component of the strategy is justified by reference to sustainability data and is effective, since targeting development at these locations will ensure a more sustainable pattern of development.

Paragraph 4.14

We maintain that the strategy for redeveloping the Eldon Way Industrial Estate for housing and other alternative uses to employment is unsound. It is neither justified nor effective. The Industrial Land Availability Study 2006 sets out on page 7 strategic objectives. The 3rd objective seeks to Support town centre and industrial estate enhancement initiatives aimed at improving the environment ensuring the area is economically prosperous and competitive. Clearly the strategy as currently drafted envisages major changes to existing industrial estates, including alternative uses. This strategy is not consistent with other strategies and evidence based studies and so cannot be justified in the context of the tests set out in PPS12. It is also an ineffective strategy since the new employment locations that would free up the Eldon Way site for redevelopment relies on transport infrastructure that has no certainty of being delivered. Principally, the erosion of employment uses at Eldon Way could make the settlement of Hockley/Hawkwell less sustainable and thus conflict with the tiered approach on page 40, paragraph 4.9.

Policy H1

Prioritising the use of previously developed land ("pdl") is supported in principle. It is a justified strategy in the context of PPS3 and effective as sequential choices can be made by implementing the policy. However, the District Council is also promoting a strategy which seeks the redevelopment of existing employment locations to alternative uses and by consequence is identifying green field sites for new employment development elsewhere (Policy ED4 refers). This 'land swapping' is not considered consistent with PPS3, nor is it considered to be justified or effective in delivering the desired strategy. This is particularly the case as most of the existing employment sites are occupied and therefore unavailable for redevelopment. In addition, the new Greenfield sites are in an arguably less sustainable locations away from the top tier settlements identified on page 40 of the Submission Core Strategy. Clearly this element of the strategy is inconsistent with the wider strategy.

The Industrial Land Availability Study 2006 is included as an evidence base by the District Council. It includes an introductory section, which explains that the authority wishes to make Rochford the place of choice for new business. It includes several strategic objectives on page 7 including "Support town centre and industrial estate enhancement initiatives aimed at improving the environment ensuring the area is economically prosperous and competitive." It reviews existing employment areas and identifies vacant land, including land available from allocations. It does not include any assessment of new sites or potential opportunities for new sites that might have been expected to feed into the Core Strategy. The strategy for identifying Green Belt site employment allocation does not appear to be based on any evidence in this document and in that context cannot be justified. The strategy being promoted potentially conflicts with Government policy in PPG13, PPG2 and emerging PPS4.

The Employment Land Study 2008 is a much later document. It has a key recommendation on page ii "we recommend that Rochford District Council adopts strong policies to protect existing employment land." Furthermore under recommendations for existing sites on page iii-iv of that document it states "In our view, Hockley Trading Centre is a strategically well placed employment location. However, we recognise the ambitions of the Hockley Town Centre masterplan and that within this the Council should consider it to be allocated for other uses. However, we recommend that this reallocation happen only if provision is made within the masterplan for office use within Hockley Town Centre as part of a mixed use scheme." The view of the writers of this document is clear - the Eldon Way Industrial estate (Hockley Trading Centre) is a good employment site and that it is for other reasons that alternative uses are being considered and only then if office development is supported. This supports our representations that new future uses at the Eldon Way site should be employment dominated and that alternative uses should relate to the objectives of the Town Centre which is to enhance the shopping and leisure facilities. Residential is not an appropriate alternative.

This document recommends the use of land to the west of Rayleigh for employment and envisages Green belt release. However, the SCS does not explain through the evidence base why existing employment sites should be 'deallocated' and Green belt land unnecessarily used.

16921 Object

CHAPTER 4 Policy H4 - Affordable Housing

In addition to these key issues we have some specific concerns. As a consequence we maintain an objection to the second paragraph of Policy H1. This policy states that the Council will seek the redevelopment of various industrial estates including Eldon Way. The Policy says that alternative uses will be sought (presumably alternative to the existing employment offer) and that new land will be allocated elsewhere. This policy statement, in relation to Eldon Way in particular, is unsound for a number of reasons:

The emerging Hockley Area Action Plan consulted upon in 2008 states that the Eldon Way Industrial Estate is strategically well placed. In a sense this statement underplays the true importance of this highly sustainable employment location and only major employment area in Hockley/Hawkwell. The employment area is adjacent to the railway station and located a short distance from the main bus routes that run along Spa Road. Some of the residential areas of the town are also within walking distance of this commercial area, thus providing a potential for sustainable travel by employees. The Eldon Way Industrial Estate is therefore right at the heart of the settlement of Hockley/Hawkwell and provides an opportunity to meet sustainable transport objectives by reducing the need to travel by car. Consequently, this employment area should be highlighted as a premier employment site in sustainability terms, both in the context of PPG13, PPG4 and PPS6. To encourage alternative uses as set out in Policy H1 implies the removal of the majority of employment based activity at Hockley/Hawkwell and this would be contrary to National policy, would not be the most appropriate strategy when considered against alternatives and is therefore unsound.

Whilst it is acknowledged that improvement to the Eldon Way Industrial Estate can and should take place, the extent to which the mix of employment uses should be altered in favour of alternative land uses requires careful consideration. It is our view that a mix of existing or indeed new employment land uses with some Town Centre type uses should dominate the Eldon Way site. A mix of employment types between offices, light industry and other high technology industries should be encouraged as this will provide many locational advantages to the firms that agglomerate together. The Council says that the existing uses on this site are harmful to amenity. However, the site has operated for many years without any significant issues and if renewal for B1 type uses are encouraged then the employment area can be maintained without harm to amenity. Renewal of the employment stock can help develop and improve trade, improve the sustainability of businesses as a whole and make for a more flexible labour market as skill levels are varied. A singularly different use altogether or a variety of uses which excludes employment could undermine the long term sustainability of the area and Town Centre. As such Policy H1 is not an effective strategy and should be amended to acknowledge the importance of Eldon Way and the need to renew the employment stock to ensure that the site maintains its important role as a employment site, albeit with some ancillary alternative use development where appropriate.

The 2008 Retail Study notes that Hockley Town Centre is not strong and there is trade leakage. Eldon Way Industrial Estate provides a customer base for existing town centre uses. Weekday spending within town centres is an important contributor to the viability of many retail and leisure businesses either through expenditure by employees during the lunchtime trade or expenditure by employers, on necessary goods and services. This relationship helps sustain the critical mass of a centre and provides a platform for new retail and leisure growth. It is important to have a balanced centre with a variety of uses. Policy H1, as currently drafted, implies the removal of employment related development and this is likely to harm the vitality and viability of Hockley Town Centre. The Council has presented no evidence to suggest that this is not the case. Importantly, the 2008 Retail Study explains that there is a need for additional retail and office space. In principle we would support additional office and other B1 type uses plus retail but employment uses should always dominate for the sustainability reasons given above. Retail and office development are likely to present a viable alternative to some of the more industrial type uses.

Consequently, we do not support the phrasing of the third paragraph of Policy H1 and maintain that the most appropriate strategy is to seek renewal of the employment stock with employment based uses and with some new retail development. Removal of employment land uses completely as currently implied-which was the approach adopted in the emerging Hockley Area Action Plan - is not a justifiable strategy.

One of the key tests of a Core Strategy is consistency between policies in the emerging Plan and this strikes at the heart of demonstrating an effective strategy. Policy H1 implies alternative uses to employment and the relocation of Eldon Way to a site identified under Policy ED4. However, Policy RTC6 sets out a suite of policy criteria for Hockley Town Centre which includes employment and commercial activities. In addition Policy ED3 seeks the protection of sustainable employment sites (Eldon Way) and notes that some reallocation of existing employment sites will include a proportion of employment. It notes that in the case of Eldon Way employment development will form a component. The policies appear at odds with one another. The third paragraph of Policy H1 should be deleted as the second paragraph is sufficient to set a strategic context for delivering new housing development. The employment policies and Hockley specific policies should be left to consider the type and quantum of land uses appropriate in the area. If the third paragraph of H1 is to be retained then it should tie in more with Policy RTC6 and in our view explain that employment uses should dominate any redevelopment proposals for the Eldon Way site and that retail and leisure uses should be a supporting proportion.

Implementation, Monitoring and Delivery - page 132 onwards

One of the key tests of soundness is that the Core Strategy should be effective - it should be able to deliver its strategy. The Implementation strategy set out at page 132 onwards of the Core Strategy does not explain how Policy H1, RTC6 and the strategy for redeveloping Eldon Way (Policy ED2 and ED3) will be delivered. The comment at Policy ED3 on

16921 Object

CHAPTER 4 Policy H4 - Affordable Housing

page 161 identifies it as a potential risk and alludes to land assembly difficulties and the choices to be made by owner/occupiers. In order to deliver the strategy there should be a clear understanding as to whether the new land use values being promoted are sufficient to encourage relocation voluntarily. Secondly there is a need for more information to be gathered and presented to show that current occupiers and landowners are willing to relocate and the timescales likely for this. For example, do the building lease contracts enable early review or are there any break out clauses. There should be some commentary on whether the Council will engage in compulsory purchase orders to pursue their strategy should the 'encouragement' route fail. As currently drafted there is no clear path to deliver the strategy and the danger is that despite reallocation, the sites identified for redevelopment will not come forward in the plan period. In this regard, evidence to satisfy the test of soundness is not provided.

Policy H2 - General Locations

We support the strategy that new housing growth should be targeted at land South of Hawkwell. This area is suitably located to the urban area of Hockley/Hawkwell and to tie in with the settlement tiers on page 40 of the Submission Core Strategy the same terminology for settlement should be used. This ensures a consistency within the SCS. The choice of this location as a housing growth area is appropriate as it would not contribute to the coalescence of the urban area with Ashingdon (there is existing development between this identified housing area at Rectory Road and Ashingdon and moreover, Rectory Road can form a natural physical boundary for the new Green belt boundary. This area is also well located to the existing road network. Cherry Orchard Way has recently been improved and provides much better accessibility to the proposed housing growth area than any other location around Hockley/Hawkwell. The existing bus routes along Rectory Road also make this location sustainable and the additional housing proposed will help underpin the financial viability of bus routes in this area. Locally there are employment opportunities, including the small commercial estate off Main Road. The Eldon Way Industrial Estate adjacent to the Town Centre also provides the opportunity for employment locally. Extensive public open space, play pitches and built leisure facilities are located just to the north of this area and a community hall is located off Briar Close, nearby. The area to the south of Hockley/Hawkwell is close to local shops on the corner of Heycroft Road and Main Road and there are numerous footpath links between this area and the local community including links via Thorpe Road, Thorpe Close, Briar Close, Hawkwell Park and Park Gardens. The area therefore provides the opportunity to enhance existing links, including cycle links, and contribute towards community integration - more so than other sites on the south side of this settlement. The site is also in the control of one house builder and deliverable.

However, we find that the Policy is not fully consistent with national policy and furthermore needs to be reviewed in order to be justified and effective. We have concerns as to how the Green Belt review strategy set out at Policy H3 and in the Local Development Scheme integrates with this policy and feel that Green Belt review should be more explicit throughout the SCS. We note that it is only Policy H3 which indicates the need for Green Belt land review. In fact Policy H3 only pays lip service to the need for a Green Belt review and provides, at best, loose advice in this regard. It says that prior to 2021 Green Belt will be safeguarded save for the releases noted under Policy H2. Policy H3 then goes on to talk about land release for development after 2021 but no time period is set out to provide a framework for any Green Belt review in this latter period. In our view Policy H2 and certainly Policy H3 and Policy GB1 should explain fully the need for a Green Belt review and that such a review should take place for a defined period. That such a review has not taken place in advance of the SCS is a serious matter for the Inspector to consider in the context of soundness. That said, it is considered that any review of Green Belt should have regard to a period beyond 2021 as indicated by draft Policy H3. Paragraph 1.9 of the East of England Plan explains "this RSS covers the period to 2021 but sets a vision, objectives and core strategy for the longer term". 2026 is therefore considered a minimum suitable period that any Green Belt review must have regard to in order to meet the 5 year land supply requirements in PPS3 for the period after 2021. However, Policy SS7 of the East of England Plan talks about Green Belt reviews up to 2031. In view of this and the need to explore the circumstances of Rochford - that existing settlements cannot contain future housing growth; that Green Belt is necessary to provide housing; and that these provide exceptional reasons to vary the Green Belt locally (paragraph 2.6 to 2.7 of PPG2) the policies and strategy for the SCS should identify a Green Belt review covering the period to 2031 and set out why a review is necessary.

Policy H2 - Phasing and Quantum

The 2008 Preferred Core Strategy document indicated that the area south of Hawkwell should deliver 330 dwellings over a phasing period to post 2021 (see Policy H2 and H3 of that document). The SCS reduces the quantum of housing in this area to 175 but expects delivery by 2015. At a broader level the Preferred Options Core Strategy of 2008, (Policy H2) required 1,450 dwellings to 2015 and a further 1,050 by 2021. In the SCS the figures are now 775 and 1,010 respectively.

Since the SHLAA post dates the publication of the SCS, we are uncertain as to the reason why such a significant reduction in quantum of housing and extensions to the residential envelope is considered necessary. Presumably it is the 'new' strategy to redevelop existing employment areas within the settlements that has led to this change. Our representations on this strategy and specifically the Eldon Way Industrial Estate are included elsewhere within our representations. Previously we have commented on the Table at paragraph 4.6 of the Submission Core Strategy and the lack of evidence to underpin that table. It seems odd that in the space of a year the expected requirement for Greenfield sites has effectively halved on the basis of a SHLAA exercise. The community is therefore not able to effectively

16921 Object

CHAPTER 4 Policy H4 - Affordable Housing

comment on the housing land supply and at this stage the Submission Core Strategy is legally unsound.

That said, we are of the view that the quantum of housing envisaged south of Hockley/Hawkwell should be more than the 175 currently envisage. In coming to this view we have reviewed the Urban Capacity Study and the latest housing figures in the Annual Monitoring Report 2008. We conclude that the shortfall in housing land supply is such that 330 dwellings in this location is appropriate.

The recently published SHLAA is based upon the data obtained from the Urban Capacity Study 2007, a call for sites exercise and data from the Annual Monitoring Report 2008.

The 2007 Urban Capacity Study (UCS)

1. 2007 is widely recognised as being the peak level of house prices in the UK and it was acknowledged by Government and practitioners alike that 2007 house prices were at an unsustainable level. It is our view that utilising the 2007 UCS as an evidence base without reference to the market does not pick up the depressed demand that is likely to now exist. Recent corrections to the housing market now mean that housing land prices are at a much lower and arguably more affordable level than before. The implications are that some pdl may not be viable for housing development. Often brownfield sites have much higher development costs than Greenfield sites and so the yield from urban capacity will be much lower than anticipated in the 2007 study. One example is the employment allocation of the Adopted Local Plan located at 76-92 Main Road, Hawkwell. This site has been allocated for several years and has been available during the most recent rises in residential property prices during 2006-07. As a consequence the lack of progress on the site can only be described by its current occupancy and perhaps it comprises high value uses that do not encourage redevelopment. Despite this the site is identified as having high potential for alternative use and high potential demand. The SHLAA form notes that there is no information on legal constraints (e.g., tenancy agreements) As a consequence it is difficult to see how this could continue to be a potential site and as a consequence the allowance for green field releases should be increased.

2. There are considered to be other instances in the UCS and the recently published SHLAA where the assumptions and calculations would indicate that the 1301 urban capacity figure is over optimistic and the SHLAA assessment is limited. In the assessment of 'non-residential sites in appropriate locations' within the UCS assumptions are made as to the probability of sites coming forward for new housing. 68-72 West Street, Rochford is identified as a high probability site but we note that it has been subject to 7 refusals of planning permission/conservation consent. There is a significant gap between the urban capacity identified as being suitable by the Council and the capacity applied for by the owners. Given its alternate use value, it is debateable whether the two capacity figures can be reconciled. No 247 London Road is another example of a site allocated in the Local Plan but which hasn't come forward. This is now the subject of a proposal for a care home and if approved would further limit the scope for market/affordable housing capacity on the site. A striking example of how the urban capacity study has underestimated is also evidence by 2-4 Alderman's Hill, Hockley - described as a disused service station. There has been no residential development application on this site since 2004 and most recent applications have sought commercial use of the site. Rather than being evidence of housing land deliverability, this particular site evidences the need for commercial uses in the area. There are therefore deliverability doubts over these 'high probability' categories which amount to some 40 units.

3. In relation to the assessment in the UCS entitled 'intensification of existing residential uses' we note that the assessment is premised on an assessment of recent trends taking into account net completions between 2001-2006 and 2005-06. This is effectively an assessment of windfall trends and not an approach that PPS3 encourages. Importantly Table 3-12 in the urban capacity study seeks to project forward urban capacity from residential redevelopment - a period that benefited from high house prices and PPG3 guidance encouraging redevelopment. These two circumstances have markedly changed and so the assumptions and conclusions drawn would also have changed. Even taking into account the UCS discounting, the reliability of the 404 units from this source must be questioned and in our view the 1301 figure cannot be a sound basis for urban capacity and further Greenfield releases are necessary.

4. In the section of the UCS entitled 'subdivision of dwellings' and 'living above the shop' it is estimated that recent trends would result in 7 and 15 units. Our concerns with using trends as a basis for urban capacity are detailed above - PPS3 does not encourage this. Rather, local authorities are charged with surveying their areas, identifying which areas may yield urban capacity and how much and developing policies to achieve that. Government guidance does not encourage the estimation of windfalls in the way the UCS does.

5. Redevelopment of established employment land is a separate section within the UCS. At 1 above we identify the low probability of the Main Road residential allocation coming forward. This remaining section of the UCS considers 11 further employment sites which were first identified in the 2000 UCS. Three of these are considered to have a high probability of coming forward. We have looked at these three sites and can find no evidence that they are likely to come forward. In the 8 years between 2000 and 2008 the three identified high probability employment sites have not been developed and there is no reason to assume that the next 5-10 years will be any different. For example the Rawreth Industrial Estate is identified as being well used in the UCS and although it has some unneighbourly uses there is no indication that the site is available, suitable or deliverable for residential. Land between 39-69 Lower Lambricks, Rayleigh is identified as having a high probability of residential uses. Yet there is no

16921 Object

CHAPTER 4 Policy H4 - Affordable Housing

evidence of any pre-application advice or planning applications for this area. Stambridge Mills, Mill Lane, Stambridge is a further example. This site is separated from the urban area, in a flood risk zone and protected in the 2006 Replacement Local Plan by Policy EB9 which promotes B1 uses. Against this background there is only two relevant planning applications affecting this area both date from the early 1990's and relate to a plant room and loading bay. There is no evidence that this is likely to come forward for residential purposes in the next 5-10 years.

6. In the UCS extant permissions are identified as 856 dwellings. It is important to note that this figure needs to be continually reassessed so that from the point of adoption of the Core Strategy a 5 and 10 year housing land supply is available. The SHLAA notes extant permissions for 2009-14 being 106. As noted below extant permissions do not necessarily translate into deliverable sites. There is therefore a contingency that needs to be built in. Further allocations on greenfield land need to be increased and as such the quantum of housing in the area south of Hockley/Hawkwell should be increased to 330 dwellings in order to begin to meet the shortfall identified.

The District Council's 5 year housing supply assessment

7. The District Council's Annual Monitoring Report ("AMR") 2008 purports to demonstrate a 5 year housing land supply. The preamble to Table 4.10 in the AMR 2008 explains that Rochford District Council ("RDC") has included units under construction, units with full permission, units with outline permission, units with a resolution to grant, units subject to preapplication discussion/Urban Capacity Assessment and land allocations in its trajectory. The reader is referred to Appendix B which breaks down the sites in more detail. The recently published SHLAA also includes a table showing a potential 1273 dwellings deliverable. However, it refers to "appropriate brownfield sites." Since these 'appropriate sites' are do not benefit from an application or a planning permission it is difficult to programme them into the housing delivery trajectory.

8. In the full planning permission category of the AMR 2008 where work has not yet started there can be no guarantee that all these sites will be delivered in the 5 years. This comment relates to the one above in relation to the recently published SHLAA. It is not uncommon for permissions to be obtained to provide a means for valuing a site where the owner has no immediate plans to sell the site or develop housing. Delivery may also be hampered by funding constraints, or site assembly problems (where sites are in an alternative use or relocation constraints). Appendix B of the AMR 2008 does not set out the intentions of the landowner or whether the sites are truly achievable in the 5 year period as per PPS3 requirements. The SHLAA purports to show developer intentions at Appendix C but the assessment by the local authority into the legitimacy of some of the claims is not presented. The evidence base is not as full as it should be to demonstrate the robustness of Table 4.6 of the SCS. It is also unclear the extent to which this table is based on either the UCS 2007, AMR 2008, SHLAA 2009 or a combination of all three. This should be set out clearly.

9. In addition, to the 'non delivery' of a proportion of new homes in the AMR 2008, there is concern at the timings of delivery in that data set, for example, 10 units in 2008-2009 relates to outline planning permissions and it is doubtful whether reserved matters can be turned round quick enough to begin delivering housing in this year period. There could well be examples in that set of data where the delivery of units in the first year of the 5 is unlikely, thus delivery is reduced for that period and pushed back and this process is then compounded throughout the data set up to and beyond year 5. Statistical evidence from the Department of Communities and Local Government ("CLG") reveals that building starts are 43% down on the quarter to March 2009 compared with March 2008. It is not clear whether the recently published SHLAA has taken this into account and unless it does the data in the Table at 4.6 of the SCS cannot be relied upon, particularly given the current recessionary circumstances. In relation to the Table at Paragraph 4.6 a refinement is therefore needed to take into account this effect on phasing.

10. This problem is compounded for other units relied upon where permission has been granted but no start on site has been made; this accounts for a considerable number of sites in 2009-10 period (100 dwellings) which is (year 2 of the 5 year period). A delay in these will require more Greenfield sites to be identified in order to meet the shortfall.

11. Finally we note that the East of England Plan expresses its land supply requirement as a minimum. This strategy is not reflected in the

16921 Object

CHAPTER 4 Policy H4 - Affordable Housing

Submission version of the Core Strategy policy H2.

12. In summary since neither the UCS nor the Annual Monitoring Report form a SHLAA, reservations are maintained about the degree to which sufficient housing land has been identified.

Policy H3

In the Preferred Options Core Strategy 2008 more locations were identified for housing growth in the post 2021 phase. Whilst it is our view that land south of Hockley/Hawkwell should benefit from a greater number of dwellings than the 175 currently identified (330) in order to make the strategy effective. We are concerned at the significant change in strategy between the Preferred Option Core Strategy and the Submission version, which has significantly less housing growth on green field sites. This change in strategy is so significant that we would question whether it is appropriate in the context of soundness and the consultation processes that have taken place so far.

We also have concerns as to how the Green Belt review strategy set out at Policy H3 and in the Local Development Scheme integrates with other policies in the SCS and feel that Green Belt review should be more explicit throughout the SCS. As it currently stands there is a potential conflict with national policies and limited justification for the Green belt strategy. We note that in Policy H3, which indicates the need for Green Belt land review, the advice is limited and unclear. In fact Policy H3 only pays lip service to the need for a Green Belt review and provides, at best, loose advice in this regard. It says that prior to 2021 Green Belt will be safeguarded save for the releases noted under Policy H2. Policy H3 then goes on to talk about land release for development after 2021 but no time period is set out to provide a framework for any Green Belt review in this latter period. In our view Policy H3 and Policy GB1/H2 should explain fully the need for a Green Belt review and that such a review should take place for a defined period. That such a review has not taken place in advance of the SCS is a serious matter for the Inspector to consider in the context of soundness. That said, it is considered that any review of Green Belt should have regard to a period beyond 2021 as indicated by draft Policy H3. Paragraph 1.9 of the East of England Plan explains "this RSS covers the period to 2021 but sets a vision, objectives and core strategy for the longer term". 2026 is therefore considered a minimum suitable period that any Green Belt review must have regard to in order to meet the 5 year land supply requirements in PPS3 for the period after 2021. However, Policy SS7 of the East of England Plan talks about Green Belt reviews up to 2031. In view of this and the need to explore the circumstances of Rochford - that existing settlements cannot contain future housing growth; that Green Belt is necessary to provide housing; and that these provide exceptional reasons to vary the Green Belt locally (paragraph 2.6 to 2.7 of PPG2) the policies and strategy for the SCS should identify a Green Belt review covering the period to 2031 and set out why a review is necessary. Not to do so is unsound for justification and effectiveness reasons.

Policy H4 - Affordable Housing

As currently drafted we feel that the policy is not concise enough and that the policy does not reflect current guidance. The phrase 'at least' would indicate that in most cases affordable housing above 35% will be sought. Our understanding is that the 35% figure is recommended in the SHMA and that to provide a policy framework which seeks to go beyond that figure would potentially be unworkable as many sites could not financially bare the burden of over a third of the net developable area not yielding a value. The policy should be redrafted so that "a target of 35% affordable housing shall be provided on all developments of 15 or more units..."

The last policy paragraph provides some scope to relax this policy, if there are clear site constraints that make on site provision impossible. The policy, though, is not particularly clear on what would constitute exceptional circumstances. For example, physical site constraints, which unusually raise development costs, would be one such reason and this should be specified. There may be other reasons including the nature of housing needs in the part of the District the site is located which justify affordable housing below the 35% target. Design reasons may also have a bearing on how provision is made and in what form, particularly if the site is in an historic area where design might override housing need argument. It is therefore recommended that the policy expand on the type of circumstances where affordable housing may be relaxed and the type of information that will be sought of applicant's who have a need to invoke this part of the policy.

Policy H5

In support of the policy, it is advantageous that no percentages requiring a specific mix are included. This flexibility will enable developers and the Council to respond directly to changing circumstances in the local housing market. In the past some authorities have set out a percentage for the type of housing they require only to find that after a few years of strict implementation there is an oversupply of property of that type and no flexibility in the policy to address the problem.

Policy ED2 - London Southend Airport

It is considered that to grow non aviation related employment at a location north of Southend Airport where sustainable access from the rest of Rochford District requires careful consideration. Most Airports are serviced by aviation related employment development and as such a location close to the airport is sensible and sustainable. However, for surface access reasons it would be inappropriate to encourage travel from Rochford's main settlements to what essentially

16921 Object

CHAPTER 4 Policy H4 - Affordable Housing

would be a rural location for general employment uses. Whilst sustainable access would be improved by a railway station and better bus links, there is no evidence to suggest that a sustainable surface access strategy for non related employment development at the Airport can be achieved. Paragraph 11.22 explains the critical importance of a railway station to the delivery of the strategy yet the Transport Chapter and Implementation Chapter provide neither a policy nor an assessment of deliverability. It is also notable that the South Essex Rapid Transit Policy T4, as set out at paragraph 10.16, notes that Rochford is not proposed to be served but may be served in future phases. This uncertainty is no way to plan for a major employment land supply strategy in the District. In relation to PPS12, the ability to deliver sustainable green field employment sites away from the top tier settlements of Hockley/Hawkwell, Rochford and Rayleigh is unsound.

Policy ED3

We fully support the first sentence of the Policy and note the apparent contradiction with the statements in Policy H1 and elsewhere which seeks to develop on alternative uses at industrial estates such as Eldon Way.

This contradiction is evidence in the second paragraph of Policy ED3. In our representations on Policy H1 we have explained why it is not sound to diminish the employment stock at Eldon Way and the importance of maintaining a dominance of employment type uses at this estate. These arguments are not repeated here.

We note the sentiments of the third paragraph and in accordance with our representations elsewhere are of the view that this sentence should be revised to explain that Eldon Way will accommodate principally employment type uses. As noted elsewhere uses which are an alternative to employment would diminish this highly sustainable employment site and this is unsound when assessed against National Policy.

Policy ED4 - Future Employment Allocations

In part, the de-allocation strategy is not supported as it is considered unsound when set against sustainability criteria. In relation to the Eldon Way Industrial Estate it is considered critical to the ongoing sustainability of this settlement that employment uses are maintained at this location. It is close to the railway station, bus routes and local residential areas from which the opportunity exists for employees to walk or cycle to work. Its location adjacent to the Town Centre offers opportunity for some retail and leisure development to complement the centre and to maintain a supporting function. These sustainable benefits would not occur with the deallocation of Eldon Way or the significant erosion of its employment floorspace. Whilst redevelopment of the employment site to achieve new employment is supported, the dominant land use should continue to be employment use. As a consequence, the 18ha of land required for employment in this policy is considered to be excessive and the policy should be reviewed to explain that redevelopment of existing employment sites for primarily new employment development will be encouraged.

Policy T4

It is noted that the South Essex Rapid Transit policy, as elaborated upon at paragraph 10.16 notes that Rochford is not served but may be served in future phases. This uncertainty is contrary to the delivery principles of soundness and directly puts at issue the employment land supply strategy in the District which is founded on sustainable access to new sites. In relation to PPS12, the ability to deliver sustainable green field employment sites away from the top tier settlements of Hockley, Rochford and Rayleigh is unsound.

Appendix H1, CTL1 - Infrastructure

It is recognised that necessary infrastructure provision is an important part of creating a sustainable development and in that context appendix H1 is supported. The supporting text notes that the table at Appendix H1 is not exhaustive and in that context it is very important that the framework properly distinguishes between what should be provided as part of new development schemes and what shouldn't. It is therefore essential that the framework acknowledges the importance of Circular 05/05 and the tests which say that provision of infrastructure and/or contributions should be:

- * Relevant to planning
- * Necessary to make the proposed development acceptable in planning terms
- * Directly related to the proposed development
- * Fairly and reasonably related in scale and kind to the proposed development
- * Reasonable in all other respects

As is made clear (Paragraph B9 of Circular 5/05) contributions should not be used to make good existing deficiencies in infrastructure provision. Nor are they to be used to secure contributions to the achievement of wider planning objectives that are not necessary for consent to be granted. In that context the Core Strategy should set this out as its policy framework.

Policy GB1 - Green Belt

16921 Object

CHAPTER 4 Policy H4 - Affordable Housing

The objectives of this policy are supported, although as noted in other representations the SCS is unsound as it does not meet the tests in relation to justification, compliance with national policy or effectiveness of strategy.

Policy GB1 mentions the objective to allocate the minimum amount of Green Belt land necessary. The policy should link to the requirements of PPG2 and RSS which are discussed in relation to the representations on Policy H2 and H3. The policy should set out a timeframe for the review and why Rochford requires a Green Belt review (what the exceptional circumstances are in this District that justify a review of local boundaries. The policy should be amended to set out a 2031 time frame and this may require the SCS to have an extended life span beyond 2021.

We would recommend the deletion of the word character since Green Belt designation is not related to landscape character as currently drafted. For clarity we would also recommend that the Policy or its supporting text explain that a Green Belt review will take place in support of an allocations document (paragraph 6.6) in order to identify an appropriate new boundary. This is particularly necessary given the commitment to a Green belt review in the adopted Local Development Scheme.

Policy CLT1 - Planning Obligations and Standard Charges

In view of the need to test fully the basis on which standard charges are based it is important that any document produced is in a development plan document that enables an examination in public. The policy should explain this in order that when the document is produced it accords with Policy and is based on sound evidence.

ENV9 - Code for Sustainable Homes

Object. The advice from the Department of Communities and Local Government is that the new requirement to have a rating against the Code does not make it mandatory to build a Code home or to have each new home assessed against the Code. It does however mean that all buyers of new homes be given clear information about the sustainability of the new home. A house builder can do this in one of two ways:

- they can choose to build a Code home, have that home assessed against the Code and provide the home buyer with a Code certificate stating the star rating the home has achieved
- or, they can choose to build to current building regulations standards, not to pay for an assessment and instead download a nil-rated certificate of non-assessment (also referred to as a nil-rating) to provide to the home buyer.

As such the Rochford policy requirement that coding 3 be achieved by 2010 and Code 6 by 2013 is out of step with Government advice. The policy wording should explain that it is just the coding that is a requirement of new homes and not necessarily that new homes should be constructed to achieve a standard.

The current Government objectives are for the code to be introduced over a reasonable period with development to be code 3 by 2010, code level 4 by 2013 and code level 5 by 2016. In this regard the policy, as drafted, seeks to achieve code 6 by 2013 and consequently compresses the code requirements into a shorter time scale with the costs associated expected to be subsumed within the housing market through higher prices. This is not a realistic strategy for the delivery of sustainable homes and we consider that the policy should be revised to extend the period of compliance but to also make it more flexible based on local circumstances.

Research undertaken on behalf of the Housing Corporation and English Partnerships, published in February 2007 'A cost review of the code for sustainable homes' reveals that code 6 is unlikely to be unattainable given existing technologies and that achieving code 5 could result in a 12% to 20% increase in costs that would have to be passed onto the consumer. Given the variability of the housing market with peaks and troughs, it is unlikely that the housing market would be able to subsume this level of price increase.

The code system policy as currently drafted does not have regard to site circumstances and so many of the requirements could be difficult to meet. For example, micro electricity generation on site may be difficult to achieve where local circumstances deter the capture of wind or solar power. If more expensive technologies are required to generate power than is the norm then costs will rise. There may be other competing reasons why designs cannot include certain sustainability measures if housing sites are in sensitive landscape and historic locations. Alternatively there may be significant development costs associated with site specific circumstances and so viability of the site's development becomes a valid consideration. By insisting on the code for sustainable homes other policy objectives such as affordable housing at particular rates and other contributions may need to be reconsidered. Consequently, we are of the view that this policy should be drafted in a manner which enables site specific circumstances to be taken into account. As noted above the Government explains that the code is a certification requirement and does not necessarily mean that buildings are constructed in accordance with a code level.

It is also important to note that it is not the purpose of planning legislation to duplicate other legislation. In this regard, the policy should accept that the Building Regulations will be the main vehicle for implementing this policy and that unless the coding requires external development then there will be no need to specify what is to be carried out in a planning application.

CHAPTER 4 Policy H4 - Affordable Housing

Summary: Policy H4 - Affordable Housing

As currently drafted we feel that the policy is not concise enough and that the policy does not reflect current guidance. The phrase 'at least' would indicate that in most cases affordable housing above 35% will be sought. Our understanding is that the 35% figure is recommended in the SHMA and that to provide a policy framework which seeks to go beyond that figure would potentially be unworkable as many sites could not financially bare the burden of over a third of the net developable area not yielding a value. The policy should be redrafted so that "a target of 35% affordable housing shall be provided on all developments of 15 or more units..."

The last policy paragraph provides some scope to relax this policy, if there are clear site constraints that make on site provision impossible. The policy, though, is not particularly clear on what would constitute exceptional circumstances. For example, physical site constraints, which unusually raise development costs, would be one such reason and this should be specified. There may be other reasons including the nature of housing needs in the part of the District the site is located which justify affordable housing below the 35% target. Design reasons may also have a bearing on how provision is made and in what form, particularly if the site is in an historic area where design might override housing need argument. It is therefore recommended that the policy expand on the type of circumstances where affordable housing may be relaxed and the type of information that will be sought of applicant's who have a need to invoke this part of the policy.

1.0 Instruction and Introduction

1.1 Charles Planning Associates Limited (Chartered Town Planners) is Instructed by Swan Hill Homes Limited (Swan Hill) to prepare and submit representations on their behalf in respect of the Rochford District Local Development Framework: Core Strategy Submission (September 2009) Development Plan Document.

1.2 The comments refer to the relevant sections and policy designations in the Submission document, as appropriate.

1.3 The comments set out in this submission are intended to assist the District Council in taking forward its Local Development Framework. It is our intention to continue to be involved in the LDF preparation process and we look forward to the opportunity to comment further at the Examination to the Core Strategy.

1.4 If you have any queries regarding the content of this submission then please do not hesitate to contact:

Peter Kneen BSc (Hons) MSc MRTPI
Planner

2.0 Housing:
Policy H1 - The Efficient Use of Land for Housing

2.1 Swan Hill recognises the importance of seeking to concentrate new developments mainly in the existing urban areas, on previously developed land where possible, particularly in view of the Government seeking to ensure 60% of all such new developments are on previously development land (PDL).

2.2 However, given the character of the District, and the strategic housing requirement of the East of England Plan, Swan Hill supports the approach that the Council must also make provision for additional development on the edge of existing settlements on greenfield sites, particularly in the most sustainable locations. As such, Swan Hill supports that where feasible, the redevelopment of existing employment sites for residential/employment purposes can make a contribution towards the strategic housing requirement, provided that sufficient additional employment land is brought forward to ensure the stability of employment levels in the District, and to ensure employment growth meets the East of England Plan requirements.

2.3 Swan Hill considers that Policy H1 should include consideration that new extensions to existing settlements have regard to their potential impact on the wider characteristics and openness objectives of the Green Belt.

Policy H2 - Extensions to Residential Envelopes and Phasing

2.4 Swan Hill generally supports the approach taken by the Council in this policy. As set out above, Swan Hill consider the Council's acknowledgment that housing requirements should be met through the allocation of land on the edge of the existing settlements is the most suitable way forward to meeting the Council's strategic housing requirement and complies with the advice in PPS3.

2.5 The need for suitable greenfield urban extensions represents the best way forward for the Council to meet its strategic housing requirement, as set out in the East of England Plan. Swan Hill supports the recognition that the potential supply of alternative previously developed sites is limited, without detrimentally affecting the character of the District, and therefore the best way forward is the use of sustainable greenfield urban extensions to the existing settlements of the District.

2.6 However, Swan Hill consider that a fundamental consideration that the District Council should consider relates to the potential impact of the urban extensions on the Green Belt policy has been somewhat overlooked. The wider sustainability credentials of the settlements of the District should only be one of many key considerations for determining the level of expansion. In view of the proximity of Southend-on-Sea to all the main settlements of the District, and the influence this has on the likely location many people would travel for employment and leisure, sustainability of many of the settlements is not a key overarching factor, and greater weight should be placed on the potential impact on the openness of the Green Belt, as this cannot be remedied if development occurs in the wrong location.

2.7 As such, Swan Hill considers that determining the location of growth for the main settlements should be to identify

16877 Support

CHAPTER 4 Policy H5 - Dwelling Types

those locations where the impact on the wider setting of the Green Belt can be minimised. Further justification for those general locations chosen should be identified in Policy H2. In this regard, Swan Hill has serious concerns regarding the removal of Land South West of Great Wakering as a viable option for the growth of the settlement. The development of this area of Great Wakering, in addition to the potential redevelopment of the Star Lane Industrial Estate could provide a more comprehensive development, whilst ensuring that the wider openness of the Green Belt is maintained. Land South West of Great Wakering is significantly better placed to limit the impact on the wider Green Belt than Land West of Great Wakering, and could contribute to the provision of an important amenity and wildlife site for the local community.

2.8 In addition, Swan Hill consider that the Council now has no reserve provision in the event that any of the existing employment sites set out in Policy H1 fail to come forward for development within the envisaged timescale. Further, Land West of Great Wakering has not been identified in the SHLAA as a deliverable site to help meet the strategic housing requirement, contrary to the requirement set out in PPS3.

2.9 As such, Swan Hill would support the provision of suitable sites which could be safeguarded for future development in the likelihood of a shortfall in supply.

Policy H3 - Extensions to Residential Envelopes Post 2021

2.10 As set out above, Swan Hill supports the overall approach the Council has taken towards the provision of sustainable urban extensions as a suitable means of meeting their strategic housing requirement. However, as set out for Policy H2 above, Swan Hill has serious concerns regarding the removal of several proposed sites set out in the October 2008 Preferred Options Core Strategy, without any guarantee of the ability to deliver those sites set out in Policy H1.

2.11 As also considered above, the inclusion of West of Great Wakering for 250 dwellings should not be included ahead of South West of Great Wakering, in view of the fact that the site is not identified in the SHLAA as available, suitable and achievable as required by PPS3, and thus is not supported by a robust and creditable evidence base for its inclusion as a strategic site for development.

2.12 Whilst Swan Hill acknowledge that alterations to Policy H1 has resulted in the removal of some locations for growth in Policy H3 (as set out in the Sustainability Appraisal), Swan Hill does not consider that the most appropriate locations have been chosen.

2.13 In addition to the matters raised above, the use of West of Great Wakering would also result in the loss of valuable agricultural land, which clearly in a Green Belt location, should be less suitable for development than other sites, such as South West of Great Wakering, which would have limited impact on the wider Green Belt policy, and not result in the loss of valuable agricultural land.

2.14 Finally, in respect of Policies H1, H2 and H3, all of the above comments are based on our interpretation of the Submission Version Core Strategy when compared to the October 2008 Version of the Core Strategy. Without the ability to undertake a detailed assessment of the Council's SHLAA, it is not possible to clarify the proposed Core Strategy position regarding the proposed direction of growth proposed for the settlements in the District. As such, Swan Hill reserves the right to make additional representations regarding the proposed Policies H1, H2 and H3 following the publication of the SHLAA in due course.

Policy H4 - Affordable Housing

2.15 In general terms, Swan Hill supports the approach taken by the Council towards the provision of affordable housing for new residential developments. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H5 - Dwelling Types

2.16 Swan Hill supports the policy provision of H5, and considers that the approach taken by the Council for this policy represents a suitably flexible alternative to stipulating percentages of dwelling mix, sought by some local authorities. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H6 - Lifetime Homes

2.17 In regard to this policy, Swan Hill objects to the Council's policy where all new dwellings should be provided to the Lifetime Homes Standard. Whilst it is acknowledged that the UK has an aging population, Swan Hill considers that seeking to provide Lifetime Homes on all sites is considered to be overly onerous for proposed developers, particularly when considering the requirement for all car parking spaces to be suitable for disabled users, which could result in more schemes becoming unviable. Therefore, the provision of a percentage of Lifetime Homes should be considered through negotiations with the Council at the planning application stage, and should be determined on a case-by-case basis.

3.0 Character of Place: Policy CP1 - Design

16877 Support

CHAPTER 4 Policy H5 - Dwelling Types

3.1 The Town and Country Planning (General Development Procedure) Order 1995 (As Amended) makes the submission of a Design and Access Statement for most types of planning applications a Statutory requirement, and as such, the provision of a Design Brief represents a pre-requisite of all major planning applications.

3.2 Policy CP1 seeks to ensure the provision of good, high quality developments that reflect local characteristics and distinctiveness, this ideology is supported by Swan Hill.

4.0 The Green Belt:
Policy GB1 - Green Belt Protection

4.1 Following the amendments to the wording of the Policy since the October 2008 Preferred Options Core Strategy, Swan Hill is now generally supportive of Policy GB1 and its supporting text. However, as expressed above, it is important that where alterations to the Green Belt boundary occur as a result of the extension of the settlements to meet the strategic housing requirement, both the minimal amount of land is taken and where that land is taken for development, it represents the best available land which has a minimal impact of the wider openness characteristic of the Green Belt.

5.0 Environmental Issues:
Policy ENV3 - Flood Risk

5.1 Swan Hill generally supports the approach set out in Policy ENV3 regarding ensuring development accords with the sequential test of PPS25. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV4 - Sustainable Drainage Systems (SUDS)

5.2 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV4. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV8 - On-site Renewable and Low Carbon Energy Generation

5.3 Whilst Swan Hill recognises the importance of reducing carbon emissions, particularly in new housing developments, and the role this can play in reducing the nations overall Greenhouse emissions. As such Swan Hill is generally supportive of Policy ENV8. It is noted that Policy ENG1 of the East of England Plan sets out a threshold of developments comprising 10 or more dwellings. Swan Hill consider it important for the District Council to justify the reduction in the threshold level.

5.4 Further, no assessment of Policy ENV8 has been set out in the Sustainability Appraisal which justifies the change in threshold from that of Policy ENG1 of the RSS.

Policy ENV9 - Code for Sustainable Homes

5.5 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV9. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

6.0 Community Infrastructure, Leisure and Tourism:
Policy CLT1 - Planning Obligations and Standard Charges

6.1 Swan Hill generally supports the overall approach the Council has taken in Policy CLT1. It is considered Policy CLT1 sets out a degree of flexibility to ensure that all sites are considered on a site-by-site basis, assessing the individual merits of each planning application, in order to ensure the levels of contributions applicable meet the five tests of Circular 05/05. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policies CLT5 - Open Space;
CLT7 - Play Space;
CLT8 - Youth Facilities; and,
CLT10 - Playing Pitches

6.2 Swan Hill supports the need for new residential developments to incorporate a degree of new publicly accessible open space, children's play space, youth facilities and playing pitches, and as such, generally supports the policy approaches taken by the Council.

6.3 However, it is important that whilst the Council may seek to undertake an assessment of providing standard charges for new development, which, as set out in Policy CLT1, this should be based on thorough public consultation and consideration and sound justification. Swan Hill consider that within the provision of a standard charge, it is important that such provision allows for a degree of flexibility to ensure that each site is assessed individually and on its own merits. This is particularly important for those sites close to existing open spaces and facilities. As such, the levels of

16877 Support

CHAPTER 4 Policy H5 - Dwelling Types

open space and recreation facilities required in the 'standard charge' should be based on an up-to-date PPG17 Open Space assessment, which should be used to form a key consideration in the levels of provision likely to be required in the standard charge system proposed.

7.0 Transport: Policy T1 - Highways

7.1 Swan Hill supports the overall objectives set out in Policy T1 requiring developments to be located and designed to reduce the reliance on the private car and to meet the infrastructure needs generated by development or seek to help achieve these needs is acceptable in principle.

7.2 Swan Hill recognises the importance of providing sufficient infrastructure provision to meet the requirements of development, and that where developments have insufficient consideration of impact on existing infrastructure, they should be considered unacceptable and contrary to National policy guidance. However, Swan Hill considers it important to emphasise that the developer's role should not be seen as a means to meet existing shortfalls in provision.

Policy T3 - Public Transport

7.3 Swan Hill is generally supportive of the policy approach set out in T3, however, as set out in paragraph 7.2 above, it is important that the District Council do not consider that it is the developer's responsibility to resolve existing shortfalls in provision of public transport, and any contribution towards additional public transportation provision should only be to mitigate against the additional level of demand likely from the development proposed.

Policy T5 - Cycling and Walking

7.4 Swan Hill supports the general approach to this policy, as Swan Hill recognises the importance of promoting the use of alternatives to the private car. The policy provision acknowledges the need to ensure relevant contributions in the event of additional travel demands generated by individual developments, whilst also setting out additional aspirations for the cycle network in the District.

7.5 As such, Swan Hill considers this policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy T8 - Parking Standards

7.6 The Council has recently (January 2007) adopted SPD on the requirements for parking standards, and as such, Swan Hill generally supports the policy approach chosen by the Council. As set out in the SPD, whilst Swan Hill generally supports the approach taken by the District Council towards setting residential parking standards, in that the Council has recognised that in the suburban areas, even with some access to public transport, the majority of residents will rely on the use of private cars. However, Swan Hill has concerns over the failure of the District Council to comply with the provisions of PPG13: Transport (2001) which sets out that Local Planning Authorities should not set minimum standards for car parking. Whilst it is acknowledged that PPS3 sets out provision for the consideration of local circumstances, it is considered that the Council has not justified this deviation from PPG13's maximum standard.

7.7 Whilst it is acknowledged that such justification may become apparent through the work currently being undertaken by Essex County Council, until such time, the District Council should only seek to apply the maximum standards indicated in PPG13. However, Swan Hill recommends that the District Council make provisions in the wording of the Policy to allow for changes in the event that future policy on car parking standards need to reflect the County standard, following the completion of the County Council review.

8.0 Economic Development: Policies ED3 - Existing Employment Land ED4 - Future Employment Allocations

8.1 In respect of Policies ED3 and ED4, Swan Hill notes that they have changed considerably since the October 2008 Preferred Options document, in that they are site specific regarding the location of the proposed redevelopment of existing employment sites. These four sites are also identified in Policy H1 - Efficient Use of Land, and in general, Swan Hill supports the approach to the redevelopment of these sites (where feasible) based on the assessments of the sites set out in this version of the Core Strategy.

8.2 However, Swan Hill has concerns that these policies might not be considered suitably sound given that insufficient opportunity has been allocated for consultation on their redevelopment. Without the SHLAA being publically available prior to the consultation on this Core Strategy, an insufficient evidence base has been provided to corroborate that these sites are neither suitable or deliverable to meet the test of soundness requirements.

Summary:

Policy H5 - Dwelling Types

2.16 Swan Hill supports the policy provision of H5, and considers that the approach taken by the Council for this policy represents a suitably flexible alternative to stipulating percentages of dwelling mix, sought by some local authorities.

Representations on the Core Strategy
Submission Document, November 2009
On behalf of Barratts Eastern Counties

Introduction

The requirements of Core Strategies are enshrined in the 2004 Planning and Compensation Act, the Town & Country Planning (Local Development) England (Regulations) 2004 and the 2008 policy guidance in PPS12. The requirements of Coe Strategies are clear. And they are legal requirements. The Core Strategy must comply with the Local Development Scheme, Statement of Community Involvement and the Regulations. The Core Strategy must be subject to a sustainability appraisal, have regard to national guidance, conform generally with the Regional Spatial Strategy and have regard to any Sustainable Community Strategy. A Core strategy must be sound - justified, effective and consistent with national policy. The following representations therefore focus on these legal requirements.

HOUSING

Paragraph 4.6 - Evidence Base

To meet the soundness test Submission Core Strategies (SCS) must be justified, that is to say it must be founded on robust and credible evidence base and comprise the most appropriate strategy when considered against reasonable alternatives. The housing strategy in as far as it identifies a need for Green belt sites is sound, however, there are other elements which are unsound.

Paragraph 4.6 notes that the Strategic Housing Land Availability Assessment (SHLAA) has examined the supply of housing. It is presumed that the Table at paragraph 4.6 is the outcome of this examination. Whilst the SHLAA has some legitimacy in that it identifies various sites that are apparently available, we are concerned that because the SHLAA was only published in November 2009 it post dates the SCS. This implies that the SCS is driving the SHLAA exercise rather than the other way round. Whilst this may have no real practical effect on the outcome of the SCS and the identified need for Green Belt sites, the Inspector will be mindful of the advice in paragraphs 33 and 54 of PPS3 that SCS draw on the evidence in SHLAA. It may be that the SCS should explain how the evidence base has been used to justify the strategy.

PPS12 explains at paragraph 4.37 that Core Strategies are based on thorough evidence. Since the SHLAA has only recently been published it is considered that the SCS is unsound as it is not justifiable. This, together with other comments on the SCS, indicates that the process should be delayed to ensure that a more robust document is placed in front of the EiP Inspector.

Table at Paragraph 4.6 - Evidence base

From our review of the available evidence it would appear that the housing land supply is insufficient and that Green Belt release are required. From the wider strategy being promoted we note that some of the sites that the District Council consider to be 'appropriate' are likely to relate to existing employment areas. As set out elsewhere in our representations, we maintain severe reservations that the redevelopment of existing employment sites for alternative uses and particularly the Eldon Way Industrial Estate is unsustainable. We will make reference to the effectiveness of this strategy in relation to sustainability, whether it is justified in the context of National Policy and the deliverability of such a strategy elsewhere.

In particular, paragraph 11.32 of the SCS refers to existing employment land and sites within the UCS. It does not refer the SHLAA and as such it appears that an evidence base to support the re-use of employment land for residential is not reported in the SCS.

Having reviewed the 2008 Annual Monitoring Report, as we did when commenting on the 2008 Preferred Options Core Strategy, we maintain severe doubts as to the appropriateness of some of the previously developed sites identified as potential housing sites and their expected housing yield. Whilst we cannot at this stage ascertain whether the SHLAA

16922 Support

CHAPTER 4 Policy H5 - Dwelling Types

sites referred to in this table correlate with the Annual Monitoring Report and indeed the 2007 Urban Capacity Study, it is our view that there will be some commonality and so the reliance on these sites is likely to be at odds with Government Policy. We shall elaborate on this objection in relation to the specific housing policy below.

We note that the last two rows in the Table at paragraph 4.6 set out figures with and without Green Belt releases. The text to this section of the Core Strategy should, for reasons of clarity, explain that Green belt review will be necessary in order to deliver the required housing.

Paragraph 4.9

The table on page 40, which sets out the settlement tiers, is supported. Rayleigh, Rochford/Ashingdon, Hockley/Hawkwell are clearly the largest settlements in the District and they benefit from good employment, housing, leisure, community and public transport provision. These settlements are the most sustainable ones with the greatest mix of uses. Consequently, it is sensible that the Core Strategy identifies these as top tier settlements and is able to target them with growth accordingly. This component of the strategy is justified by reference to sustainability data and is effective, since targeting development at these locations will ensure a more sustainable pattern of development.

Paragraph 4.14

We maintain that the strategy for redeveloping the Eldon Way Industrial Estate for housing and other alternative uses to employment is unsound. It is neither justified nor effective. The Industrial Land Availability Study 2006 sets out on page 7 strategic objectives. The 3rd objective seeks to Support town centre and industrial estate enhancement initiatives aimed at improving the environment ensuring the area is economically prosperous and competitive. Clearly the strategy as currently drafted envisages major changes to existing industrial estates, including alternative uses. This strategy is not consistent with other strategies and evidence based studies and so cannot be justified in the context of the tests set out in PPS12. It is also an ineffective strategy since the new employment locations that would free up the Eldon Way site for redevelopment relies on transport infrastructure that has no certainty of being delivered. Principally, the erosion of employment uses at Eldon Way could make the settlement of Hockley/Hawkwell less sustainable and thus conflict with the tiered approach on page 40, paragraph 4.9.

Policy H1

Prioritising the use of previously developed land ("pdl") is supported in principle. It is a justified strategy in the context of PPS3 and effective as sequential choices can be made by implementing the policy. However, the District Council is also promoting a strategy which seeks the redevelopment of existing employment locations to alternative uses and by consequence is identifying green field sites for new employment development elsewhere (Policy ED4 refers). This 'land swapping' is not considered consistent with PPS3, nor is it considered to be justified or effective in delivering the desired strategy. This is particularly the case as most of the existing employment sites are occupied and therefore unavailable for redevelopment. In addition, the new Greenfield sites are in an arguably less sustainable locations away from the top tier settlements identified on page 40 of the Submission Core Strategy. Clearly this element of the strategy is inconsistent with the wider strategy.

The Industrial Land Availability Study 2006 is included as an evidence base by the District Council. It includes an introductory section, which explains that the authority wishes to make Rochford the place of choice for new business. It includes several strategic objectives on page 7 including "Support town centre and industrial estate enhancement initiatives aimed at improving the environment ensuring the area is economically prosperous and competitive." It reviews existing employment areas and identifies vacant land, including land available from allocations. It does not include any assessment of new sites or potential opportunities for new sites that might have been expected to feed into the Core Strategy. The strategy for identifying Green Belt site employment allocation does not appear to be based on any evidence in this document and in that context cannot be justified. The strategy being promoted potentially conflicts with Government policy in PPG13, PPG2 and emerging PPS4.

The Employment Land Study 2008 is a much later document. It has a key recommendation on page ii "we recommend that Rochford District Council adopts strong policies to protect existing employment land." Furthermore under recommendations for existing sites on page iii-iv of that document it states "In our view, Hockley Trading Centre is a strategically well placed employment location. However, we recognise the ambitions of the Hockley Town Centre masterplan and that within this the Council should consider it to be allocated for other uses. However, we recommend that this reallocation happen only if provision is made within the masterplan for office use within Hockley Town Centre as part of a mixed use scheme." The view of the writers of this document is clear - the Eldon Way Industrial estate (Hockley Trading Centre) is a good employment site and that it is for other reasons that alternative uses are being considered and only then if office development is supported. This supports our representations that new future uses at the Eldon Way site should be employment dominated and that alternative uses should relate to the objectives of the Town Centre which is to enhance the shopping and leisure facilities. Residential is not an appropriate alternative.

This document recommends the use of land to the west of Rayleigh for employment and envisages Green belt release. However, the SCS does not explain through the evidence base why existing employment sites should be 'deallocated' and Green belt land unnecessarily used.

16922 Support

CHAPTER 4 Policy H5 - Dwelling Types

In addition to these key issues we have some specific concerns. As a consequence we maintain an objection to the second paragraph of Policy H1. This policy states that the Council will seek the redevelopment of various industrial estates including Eldon Way. The Policy says that alternative uses will be sought (presumably alternative to the existing employment offer) and that new land will be allocated elsewhere. This policy statement, in relation to Eldon Way in particular, is unsound for a number of reasons:

The emerging Hockley Area Action Plan consulted upon in 2008 states that the Eldon Way Industrial Estate is strategically well placed. In a sense this statement underplays the true importance of this highly sustainable employment location and only major employment area in Hockley/Hawkwell. The employment area is adjacent to the railway station and located a short distance from the main bus routes that run along Spa Road. Some of the residential areas of the town are also within walking distance of this commercial area, thus providing a potential for sustainable travel by employees. The Eldon Way Industrial Estate is therefore right at the heart of the settlement of Hockley/Hawkwell and provides an opportunity to meet sustainable transport objectives by reducing the need to travel by car. Consequently, this employment area should be highlighted as a premier employment site in sustainability terms, both in the context of PPG13, PPG4 and PPS6. To encourage alternative uses as set out in Policy H1 implies the removal of the majority of employment based activity at Hockley/Hawkwell and this would be contrary to National policy, would not be the most appropriate strategy when considered against alternatives and is therefore unsound.

Whilst it is acknowledged that improvement to the Eldon Way Industrial Estate can and should take place, the extent to which the mix of employment uses should be altered in favour of alternative land uses requires careful consideration. It is our view that a mix of existing or indeed new employment land uses with some Town Centre type uses should dominate the Eldon Way site. A mix of employment types between offices, light industry and other high technology industries should be encouraged as this will provide many locational advantages to the firms that agglomerate together. The Council says that the existing uses on this site are harmful to amenity. However, the site has operated for many years without any significant issues and if renewal for B1 type uses are encouraged then the employment area can be maintained without harm to amenity. Renewal of the employment stock can help develop and improve trade, improve the sustainability of businesses as a whole and make for a more flexible labour market as skill levels are varied. A singularly different use altogether or a variety of uses which excludes employment could undermine the long term sustainability of the area and Town Centre. As such Policy H1 is not an effective strategy and should be amended to acknowledge the importance of Eldon Way and the need to renew the employment stock to ensure that the site maintains its important role as a employment site, albeit with some ancillary alternative use development where appropriate.

The 2008 Retail Study notes that Hockley Town Centre is not strong and there is trade leakage. Eldon Way Industrial Estate provides a customer base for existing town centre uses. Weekday spending within town centres is an important contributor to the viability of many retail and leisure businesses either through expenditure by employees during the lunchtime trade or expenditure by employers, on necessary goods and services. This relationship helps sustain the critical mass of a centre and provides a platform for new retail and leisure growth. It is important to have a balanced centre with a variety of uses. Policy H1, as currently drafted, implies the removal of employment related development and this is likely to harm the vitality and viability of Hockley Town Centre. The Council has presented no evidence to suggest that this is not the case. Importantly, the 2008 Retail Study explains that there is a need for additional retail and office space. In principle we would support additional office and other B1 type uses plus retail but employment uses should always dominate for the sustainability reasons given above. Retail and office development are likely to present a viable alternative to some of the more industrial type uses.

Consequently, we do not support the phrasing of the third paragraph of Policy H1 and maintain that the most appropriate strategy is to seek renewal of the employment stock with employment based uses and with some new retail development. Removal of employment land uses completely as currently implied-which was the approach adopted in the emerging Hockley Area Action Plan - is not a justifiable strategy.

One of the key tests of a Core Strategy is consistency between policies in the emerging Plan and this strikes at the heart of demonstrating an effective strategy. Policy H1 implies alternative uses to employment and the relocation of Eldon Way to a site identified under Policy ED4. However, Policy RTC6 sets out a suite of policy criteria for Hockley Town Centre which includes employment and commercial activities. In addition Policy ED3 seeks the protection of sustainable employment sites (Eldon Way) and notes that some reallocation of existing employment sites will include a proportion of employment. It notes that in the case of Eldon Way employment development will form a component. The policies appear at odds with one another. The third paragraph of Policy H1 should be deleted as the second paragraph is sufficient to set a strategic context for delivering new housing development. The employment policies and Hockley specific policies should be left to consider the type and quantum of land uses appropriate in the area. If the third paragraph of H1 is to be retained then it should tie in more with Policy RTC6 and in our view explain that employment uses should dominate any redevelopment proposals for the Eldon Way site and that retail and leisure uses should be a supporting proportion.

Implementation, Monitoring and Delivery - page 132 onwards

One of the key tests of soundness is that the Core Strategy should be effective - it should be able to deliver its strategy. The Implementation strategy set out at page 132 onwards of the Core Strategy does not explain how Policy H1, RTC6 and the strategy for redeveloping Eldon Way (Policy ED2 and ED3) will be delivered. The comment at Policy ED3 on

16922 Support

CHAPTER 4 Policy H5 - Dwelling Types

page 161 identifies it as a potential risk and alludes to land assembly difficulties and the choices to be made by owner/occupiers. In order to deliver the strategy there should be a clear understanding as to whether the new land use values being promoted are sufficient to encourage relocation voluntarily. Secondly there is a need for more information to be gathered and presented to show that current occupiers and landowners are willing to relocate and the timescales likely for this. For example, do the building lease contracts enable early review or are there any break out clauses. There should be some commentary on whether the Council will engage in compulsory purchase orders to pursue their strategy should the 'encouragement' route fail. As currently drafted there is no clear path to deliver the strategy and the danger is that despite reallocation, the sites identified for redevelopment will not come forward in the plan period. In this regard, evidence to satisfy the test of soundness is not provided.

Policy H2 - General Locations

We support the strategy that new housing growth should be targeted at land South of Hawkwell. This area is suitably located to the urban area of Hockley/Hawkwell and to tie in with the settlement tiers on page 40 of the Submission Core Strategy the same terminology for settlement should be used. This ensures a consistency within the SCS. The choice of this location as a housing growth area is appropriate as it would not contribute to the coalescence of the urban area with Ashingdon (there is existing development between this identified housing area at Rectory Road and Ashingdon and moreover, Rectory Road can form a natural physical boundary for the new Green belt boundary. This area is also well located to the existing road network. Cherry Orchard Way has recently been improved and provides much better accessibility to the proposed housing growth area than any other location around Hockley/Hawkwell. The existing bus routes along Rectory Road also make this location sustainable and the additional housing proposed will help underpin the financial viability of bus routes in this area. Locally there are employment opportunities, including the small commercial estate off Main Road. The Eldon Way Industrial Estate adjacent to the Town Centre also provides the opportunity for employment locally. Extensive public open space, play pitches and built leisure facilities are located just to the north of this area and a community hall is located off Briar Close, nearby. The area to the south of Hockley/Hawkwell is close to local shops on the corner of Heycroft Road and Main Road and there are numerous footpath links between this area and the local community including links via Thorpe Road, Thorpe Close, Briar Close, Hawkwell Park and Park Gardens. The area therefore provides the opportunity to enhance existing links, including cycle links, and contribute towards community integration - more so than other sites on the south side of this settlement. The site is also in the control of one house builder and deliverable.

However, we find that the Policy is not fully consistent with national policy and furthermore needs to be reviewed in order to be justified and effective. We have concerns as to how the Green Belt review strategy set out at Policy H3 and in the Local Development Scheme integrates with this policy and feel that Green Belt review should be more explicit throughout the SCS. We note that it is only Policy H3 which indicates the need for Green Belt land review. In fact Policy H3 only pays lip service to the need for a Green Belt review and provides, at best, loose advice in this regard. It says that prior to 2021 Green Belt will be safeguarded save for the releases noted under Policy H2. Policy H3 then goes on to talk about land release for development after 2021 but no time period is set out to provide a framework for any Green Belt review in this latter period. In our view Policy H2 and certainly Policy H3 and Policy GB1 should explain fully the need for a Green Belt review and that such a review should take place for a defined period. That such a review has not taken place in advance of the SCS is a serious matter for the Inspector to consider in the context of soundness. That said, it is considered that any review of Green Belt should have regard to a period beyond 2021 as indicated by draft Policy H3. Paragraph 1.9 of the East of England Plan explains "this RSS covers the period to 2021 but sets a vision, objectives and core strategy for the longer term". 2026 is therefore considered a minimum suitable period that any Green Belt review must have regard to in order to meet the 5 year land supply requirements in PPS3 for the period after 2021. However, Policy SS7 of the East of England Plan talks about Green Belt reviews up to 2031. In view of this and the need to explore the circumstances of Rochford - that existing settlements cannot contain future housing growth; that Green Belt is necessary to provide housing; and that these provide exceptional reasons to vary the Green Belt locally (paragraph 2.6 to 2.7 of PPG2) the policies and strategy for the SCS should identify a Green Belt review covering the period to 2031 and set out why a review is necessary.

Policy H2 - Phasing and Quantum

The 2008 Preferred Core Strategy document indicated that the area south of Hawkwell should deliver 330 dwellings over a phasing period to post 2021 (see Policy H2 and H3 of that document). The SCS reduces the quantum of housing in this area to 175 but expects delivery by 2015. At a broader level the Preferred Options Core Strategy of 2008, (Policy H2) required 1,450 dwellings to 2015 and a further 1,050 by 2021. In the SCS the figures are now 775 and 1,010 respectively.

Since the SHLAA post dates the publication of the SCS, we are uncertain as to the reason why such a significant reduction in quantum of housing and extensions to the residential envelope is considered necessary. Presumably it is the 'new' strategy to redevelop existing employment areas within the settlements that has led to this change. Our representations on this strategy and specifically the Eldon Way Industrial Estate are included elsewhere within our representations. Previously we have commented on the Table at paragraph 4.6 of the Submission Core Strategy and the lack of evidence to underpin that table. It seems odd that in the space of a year the expected requirement for Greenfield sites has effectively halved on the basis of a SHLAA exercise. The community is therefore not able to effectively

16922 Support

CHAPTER 4 Policy H5 - Dwelling Types

comment on the housing land supply and at this stage the Submission Core Strategy is legally unsound.

That said, we are of the view that the quantum of housing envisaged south of Hockley/Hawkwell should be more than the 175 currently envisage. In coming to this view we have reviewed the Urban Capacity Study and the latest housing figures in the Annual Monitoring Report 2008. We conclude that the shortfall in housing land supply is such that 330 dwellings in this location is appropriate.

The recently published SHLAA is based upon the data obtained from the Urban Capacity Study 2007, a call for sites exercise and data from the Annual Monitoring Report 2008.

The 2007 Urban Capacity Study (UCS)

1. 2007 is widely recognised as being the peak level of house prices in the UK and it was acknowledged by Government and practitioners alike that 2007 house prices were at an unsustainable level. It is our view that utilising the 2007 UCS as an evidence base without reference to the market does not pick up the depressed demand that is likely to now exist. Recent corrections to the housing market now mean that housing land prices are at a much lower and arguably more affordable level than before. The implications are that some pdl may not be viable for housing development. Often brownfield sites have much higher development costs than Greenfield sites and so the yield from urban capacity will be much lower than anticipated in the 2007 study. One example is the employment allocation of the Adopted Local Plan located at 76-92 Main Road, Hawkwell. This site has been allocated for several years and has been available during the most recent rises in residential property prices during 2006-07. As a consequence the lack of progress on the site can only be described by its current occupancy and perhaps it comprises high value uses that do not encourage redevelopment. Despite this the site is identified as having high potential for alternative use and high potential demand. The SHLAA form notes that there is no information on legal constraints (e.g., tenancy agreements) As a consequence it is difficult to see how this could continue to be a potential site and as a consequence the allowance for green field releases should be increased.

2. There are considered to be other instances in the UCS and the recently published SHLAA where the assumptions and calculations would indicate that the 1301 urban capacity figure is over optimistic and the SHLAA assessment is limited. In the assessment of 'non-residential sites in appropriate locations' within the UCS assumptions are made as to the probability of sites coming forward for new housing. 68-72 West Street, Rochford is identified as a high probability site but we note that it has been subject to 7 refusals of planning permission/conservation consent. There is a significant gap between the urban capacity identified as being suitable by the Council and the capacity applied for by the owners. Given its alternate use value, it is debateable whether the two capacity figures can be reconciled. No 247 London Road is another example of a site allocated in the Local Plan but which hasn't come forward. This is now the subject of a proposal for a care home and if approved would further limit the scope for market/affordable housing capacity on the site. A striking example of how the urban capacity study has underestimated is also evidence by 2-4 Alderman's Hill, Hockley - described as a disused service station. There has been no residential development application on this site since 2004 and most recent applications have sought commercial use of the site. Rather than being evidence of housing land deliverability, this particular site evidences the need for commercial uses in the area. There are therefore deliverability doubts over these 'high probability' categories which amount to some 40 units.

3. In relation to the assessment in the UCS entitled 'intensification of existing residential uses' we note that the assessment is premised on an assessment of recent trends taking into account net completions between 2001-2006 and 2005-06. This is effectively an assessment of windfall trends and not an approach that PPS3 encourages. Importantly Table 3-12 in the urban capacity study seeks to project forward urban capacity from residential redevelopment - a period that benefited from high house prices and PPG3 guidance encouraging redevelopment. These two circumstances have markedly changed and so the assumptions and conclusions drawn would also have changed. Even taking into account the UCS discounting, the reliability of the 404 units from this source must be questioned and in our view the 1301 figure cannot be a sound basis for urban capacity and further Greenfield releases are necessary.

4. In the section of the UCS entitled 'subdivision of dwellings' and 'living above the shop' it is estimated that recent trends would result in 7 and 15 units. Our concerns with using trends as a basis for urban capacity are detailed above - PPS3 does not encourage this. Rather, local authorities are charged with surveying their areas, identifying which areas may yield urban capacity and how much and developing policies to achieve that. Government guidance does not encourage the estimation of windfalls in the way the UCS does.

5. Redevelopment of established employment land is a separate section within the UCS. At 1 above we identify the low probability of the Main Road residential allocation coming forward. This remaining section of the UCS considers 11 further employment sites which were first identified in the 2000 UCS. Three of these are considered to have a high probability of coming forward. We have looked at these three sites and can find no evidence that they are likely to come forward. In the 8 years between 2000 and 2008 the three identified high probability employment sites have not been developed and there is no reason to assume that the next 5-10 years will be any different. For example the Rawreth Industrial Estate is identified as being well used in the UCS and although it has some unneighbourly uses there is no indication that the site is available, suitable or deliverable for residential. Land between 39-69 Lower Lambricks, Rayleigh is identified as having a high probability of residential uses. Yet there is no

16922 Support

CHAPTER 4 Policy H5 - Dwelling Types

evidence of any pre-application advice or planning applications for this area. Stambridge Mills, Mill Lane, Stambridge is a further example. This site is separated from the urban area, in a flood risk zone and protected in the 2006 Replacement Local Plan by Policy EB9 which promotes B1 uses. Against this background there is only two relevant planning applications affecting this area both date from the early 1990's and relate to a plant room and loading bay. There is no evidence that this is likely to come forward for residential purposes in the next 5-10 years.

6. In the UCS extant permissions are identified as 856 dwellings. It is important to note that this figure needs to be continually reassessed so that from the point of adoption of the Core Strategy a 5 and 10 year housing land supply is available. The SHLAA notes extant permissions for 2009-14 being 106. As noted below extant permissions do not necessarily translate into deliverable sites. There is therefore a contingency that needs to be built in. Further allocations on greenfield land need to be increased and as such the quantum of housing in the area south of Hockley/Hawkwell should be increased to 330 dwellings in order to begin to meet the shortfall identified.

The District Council's 5 year housing supply assessment

7. The District Council's Annual Monitoring Report ("AMR") 2008 purports to demonstrate a 5 year housing land supply. The preamble to Table 4.10 in the AMR 2008 explains that Rochford District Council ("RDC") has included units under construction, units with full permission, units with outline permission, units with a resolution to grant, units subject to preapplication discussion/Urban Capacity Assessment and land allocations in its trajectory. The reader is referred to Appendix B which breaks down the sites in more detail. The recently published SHLAA also includes a table showing a potential 1273 dwellings deliverable. However, it refers to "appropriate brownfield sites." Since these 'appropriate sites' are do not

benefit from an application or a planning permission it is difficult to programme them into the housing delivery trajectory.

8. In the full planning permission category of the AMR 2008 where work has not yet started there can be no guarantee that all these sites will be delivered in the 5 years. This comment relates to the one above in relation to the recently published SHLAA. It is not uncommon for permissions to be obtained to provide a means for valuing a site where the owner has no immediate plans to sell the site or develop housing. Delivery may also be hampered by funding constraints, or site assembly problems (where sites are in an alternative use or relocation constraints). Appendix B of the AMR 2008 does not set out the intentions of the landowner or whether the sites are truly achievable in the 5 year period as per PPS3 requirements. The SHLAA purports to show developer intentions at Appendix C but the assessment by the local authority into the legitimacy of some of the claims is not presented. The evidence base is not as full as it should be to demonstrate the robustness of Table 4.6 of the SCS. It is also unclear the extent to which this table is based on either the UCS 2007, AMR 2008, SHLAA 2009 or a combination of all three. This should be set out clearly.

9. In addition, to the 'non delivery' of a proportion of new homes in the AMR 2008, there is concern at the timings of delivery in that data set, for example, 10 units in 2008-2009 relates to outline planning permissions and it is doubtful whether reserved matters can be turned round quick enough to begin delivering housing in this year period. There could well be examples in that set of data where the delivery of units in the first year of the 5 is unlikely, thus delivery is reduced for that period and pushed back and this process is then compounded throughout the data set up to and beyond year 5. Statistical evidence from the Department of Communities and Local Government ("CLG") reveals that building starts are 43% down on the quarter to March 2009 compared with March 2008. It is not clear whether the recently published SHLAA has taken this into account and unless it does the data in the Table at 4.6 of the SCS cannot be relied upon, particularly given the current recessionary circumstances. In relation to the Table at Paragraph 4.6 a refinement is therefore needed to take into account this effect on phasing.

10. This problem is compounded for other units relied upon where permission has been granted but no start on site has been made; this accounts for a considerable number of sites in 2009-10 period (100 dwellings) which is (year 2 of the 5 year period). A delay in these will require more Greenfield sites to be identified in order to meet the shortfall.

11. Finally we note that the East of England Plan expresses its land supply

Core Strategy Submission Document

S - 16922 - 10009 - Policy H5 - Dwelling Types - None

16922 Support

CHAPTER 4 Policy H5 - Dwelling Types

requirement as a minimum. This strategy is not reflected in the Submission version of the Core Strategy policy H2.

12. In summary since neither the UCS nor the Annual Monitoring Report form a SHLAA, reservations are maintained about the degree to which sufficient housing land has been identified.

Policy H3

In the Preferred Options Core Strategy 2008 more locations were identified for housing growth in the post 2021 phase. Whilst it is our view that land south of Hockley/Hawkwell should benefit from a greater number of dwellings than the 175 currently identified (330) in order to make the strategy effective. We are concerned at the significant change in strategy between the Preferred Option Core Strategy and the Submission version, which has significantly less housing growth on green field sites. This change in strategy is so significant that we would question whether it is appropriate in the context of soundness and the consultation processes that have taken place so far.

We also have concerns as to how the Green Belt review strategy set out at Policy H3 and in the Local Development Scheme integrates with other policies in the SCS and feel that Green Belt review should be more explicit throughout the SCS. As it currently stands there is a potential conflict with national policies and limited justification for the Green belt strategy. We note that in Policy H3, which indicates the need for Green Belt land review, the advice is limited and unclear. In fact Policy H3 only pays lip service to the need for a Green Belt review and provides, at best, loose advice in this regard. It says that prior to 2021 Green Belt will be safeguarded save for the releases noted under Policy H2. Policy H3 then goes on to talk about land release for development after 2021 but no time period is set out to provide a framework for any Green Belt review in this latter period. In our view Policy H3 and Policy GB1/H2 should explain fully the need for a Green Belt review and that such a review should take place for a defined period. That such a review has not taken place in advance of the SCS is a serious matter for the Inspector to consider in the context of soundness. That said, it is considered that any review of Green Belt should have regard to a period beyond 2021 as indicated by draft Policy H3. Paragraph 1.9 of the East of England Plan explains "this RSS covers the period to 2021 but sets a vision, objectives and core strategy for the longer term". 2026 is therefore considered a minimum suitable period that any Green Belt review must have regard to in order to meet the 5 year land supply requirements in PPS3 for the period after 2021. However, Policy SS7 of the East of England Plan talks about Green Belt reviews up to 2031. In view of this and the need to explore the circumstances of Rochford - that existing settlements cannot contain future housing growth; that Green Belt is necessary to provide housing; and that these provide exceptional reasons to vary the Green Belt locally (paragraph 2.6 to 2.7 of PPG2) the policies and strategy for the SCS should identify a Green Belt review covering the period to 2031 and set out why a review is necessary. Not to do so is unsound for justification and effectiveness reasons.

Policy H4 - Affordable Housing

As currently drafted we feel that the policy is not concise enough and that the policy does not reflect current guidance. The phrase 'at least' would indicate that in most cases affordable housing above 35% will be sought. Our understanding is that the 35% figure is recommended in the SHMA and that to provide a policy framework which seeks to go beyond that figure would potentially be unworkable as many sites could not financially bare the burden of over a third of the net developable area not yielding a value. The policy should be redrafted so that "a target of 35% affordable housing shall be provided on all developments of 15 or more units..."

The last policy paragraph provides some scope to relax this policy, if there are clear site constraints that make on site provision impossible. The policy, though, is not particularly clear on what would constitute exceptional circumstances. For example, physical site constraints, which unusually raise development costs, would be one such reason and this should be specified. There may be other reasons including the nature of housing needs in the part of the District the site is located which justify affordable housing below the 35% target. Design reasons may also have a bearing on how provision is made and in what form, particularly if the site is in an historic area where design might override housing need argument. It is therefore recommended that the policy expand on the type of circumstances where affordable housing may be relaxed and the type of information that will be sought of applicant's who have a need to invoke this part of the policy.

Policy H5

In support of the policy, it is advantageous that no percentages requiring a specific mix are included. This flexibility will enable developers and the Council to respond directly to changing circumstances in the local housing market. In the past some authorities have set out a percentage for the type of housing they require only to find that after a few years of strict implementation there is an oversupply of property of that type and no flexibility in the policy to address the problem.

Policy ED2 - London Southend Airport

It is considered that to grow non aviation related employment at a location north of Southend Airport where sustainable access from the rest of Rochford District requires careful consideration. Most Airports are serviced by aviation related employment development and as such a location close to the airport is sensible and sustainable. However, for surface

16922 Support

CHAPTER 4 Policy H5 - Dwelling Types

access reasons it would be inappropriate to encourage travel from Rochford's main settlements to what essentially would be a rural location for general employment uses. Whilst sustainable access would be improved by a railway station and better bus links, there is no evidence to suggest that a sustainable surface access strategy for non related employment development at the Airport can be achieved. Paragraph 11.22 explains the critical importance of a railway station to the delivery of the strategy yet the Transport Chapter and Implementation Chapter provide neither a policy nor an assessment of deliverability. It is also notable that the South Essex Rapid Transit Policy T4, as set out at paragraph 10.16, notes that Rochford is not proposed to be served but may be served in future phases. This uncertainty is no way to plan for a major employment land supply strategy in the District. In relation to PPS12, the ability to deliver sustainable green field employment sites away from the top tier settlements of Hockley/Hawkwell, Rochford and Rayleigh is unsound.

Policy ED3

We fully support the first sentence of the Policy and note the apparent contradiction with the statements in Policy H1 and elsewhere which seeks to develop on alternative uses at industrial estates such as Eldon Way.

This contradiction is evidence in the second paragraph of Policy ED3. In our representations on Policy H1 we have explained why it is not sound to diminish the employment stock at Eldon Way and the importance of maintaining a dominance of employment type uses at this estate. These arguments are not repeated here.

We note the sentiments of the third paragraph and in accordance with our representations elsewhere are of the view that this sentence should be revised to explain that Eldon Way will accommodate principally employment type uses. As noted elsewhere uses which are an alternative to employment would diminish this highly sustainable employment site and this is unsound when assessed against National Policy.

Policy ED4 - Future Employment Allocations

In part, the de-allocation strategy is not supported as it is considered unsound when set against sustainability criteria. In relation to the Eldon Way Industrial Estate it is considered critical to the ongoing sustainability of this settlement that employment uses are maintained at this location. It is close to the railway station, bus routes and local residential areas from which the opportunity exists for employees to walk or cycle to work. Its location adjacent to the Town Centre offers opportunity for some retail and leisure development to complement the centre and to maintain a supporting function. These sustainable benefits would not occur with the deallocation of Eldon Way or the significant erosion of its employment floorspace. Whilst redevelopment of the employment site to achieve new employment is supported, the dominant land use should continue to be employment use. As a consequence, the 18ha of land required for employment in this policy is considered to be excessive and the policy should be reviewed to explain that redevelopment of existing employment sites for primarily new employment development will be encouraged.

Policy T4

It is noted that the South Essex Rapid Transit policy, as elaborated upon at paragraph 10.16 notes that Rochford is not served but may be served in future phases. This uncertainty is contrary to the delivery principles of soundness and directly puts at issue the employment land supply strategy in the District which is founded on sustainable access to new sites. In relation to PPS12, the ability to deliver sustainable green field employment sites away from the top tier settlements of Hockley, Rochford and Rayleigh is unsound.

Appendix H1, CTL1 - Infrastructure

It is recognised that necessary infrastructure provision is an important part of creating a sustainable development and in that context appendix H1 is supported. The supporting text notes that the table at Appendix H1 is not exhaustive and in that context it is very important that the framework properly distinguishes between what should be provided as part of new development schemes and what shouldn't. It is therefore essential that the framework acknowledges the importance of Circular 05/05 and the tests which say that provision of infrastructure and/or contributions should be:

- * Relevant to planning
- * Necessary to make the proposed development acceptable in planning terms
- * Directly related to the proposed development
- * Fairly and reasonably related in scale and kind to the proposed development
- * Reasonable in all other respects

As is made clear (Paragraph B9 of Circular 5/05) contributions should not be used to make good existing deficiencies in infrastructure provision. Nor are they to be used to secure contributions to the achievement of wider planning objectives that are not necessary for consent to be granted. In that context the Core Strategy should set this out as its policy framework.

16922 Support

CHAPTER 4 Policy H5 - Dwelling Types

Policy GB1 - Green Belt

The objectives of this policy are supported, although as noted in other representations the SCS is unsound as it does not meet the tests in relation to justification, compliance with national policy or effectiveness of strategy.

Policy GB1 mentions the objective to allocate the minimum amount of Green Belt land necessary. The policy should link to the requirements of PPG2 and RSS which are discussed in relation to the representations on Policy H2 and H3. The policy should set out a timeframe for the review and why Rochford requires a Green Belt review (what the exceptional circumstances are in this District that justify a review of local boundaries. The policy should be amended to set out a 2031 time frame and this may require the SCS to have an extended life span beyond 2021.

We would recommend the deletion of the word character since Green Belt designation is not related to landscape character as currently drafted. For clarity we would also recommend that the Policy or its supporting text explain that a Green Belt review will take place in support of an allocations document (paragraph 6.6) in order to identify an appropriate new boundary. This is particularly necessary given the commitment to a Green belt review in the adopted Local Development Scheme.

Policy CLT1 - Planning Obligations and Standard Charges

In view of the need to test fully the basis on which standard charges are based it is important that any document produced is in a development plan document that enables an examination in public. The policy should explain this in order that when the document is produced it accords with Policy and is based on sound evidence.

ENV9 - Code for Sustainable Homes

Object. The advice from the Department of Communities and Local Government is that the new requirement to have a rating against the Code does not make it mandatory to build a Code home or to have each new home assessed against the Code. It does however mean that all buyers of new homes be given clear information about the sustainability of the new home. A house builder can do this in one of two ways:

- they can choose to build a Code home, have that home assessed against the Code and provide the home buyer with a Code certificate stating the star rating the home has achieved
- or, they can choose to build to current building regulations standards, not to pay for an assessment and instead download a nil-rated certificate of non-assessment (also referred to as a nil-rating) to provide to the home buyer.

As such the Rochford policy requirement that coding 3 be achieved by 2010 and Code 6 by 2013 is out of step with Government advice. The policy wording should explain that it is just the coding that is a requirement of new homes and not necessarily that new homes should be constructed to achieve a standard.

The current Government objectives are for the code to be introduced over a reasonable period with development to be code 3 by 2010, code level 4 by 2013 and code level by 2016. In this regard the policy, as drafted, seeks to achieve code 6 by 2013 and consequently compresses the code requirements into a shorter time scale with the costs associated expected to be subsumed within the housing market through higher prices. This is not a realistic strategy for the delivery of sustainable homes and we consider that the policy should be revised to extend the period of compliance but to also make it more flexible based on local circumstances.

Research undertaken on behalf of the Housing Corporation and English Partnerships, published in February 2007 'A cost review of the code for sustainable homes' reveals that code 6 is unlikely to be unattainable given existing technologies and that achieving code 5 could result in a 12% to 20% increase in costs that would have to be passed onto the consumer. Given the variability of the housing market with peaks and troughs, it is unlikely that the housing market would be able to subsume this level of price increase.

The code system policy as currently drafted does not have regard to site circumstances and so many of the requirements could be difficult to meet. For example, micro electricity generation on site may be difficult to achieve where local circumstances deter the capture of wind or solar power. If more expensive technologies are required to generate power than is the norm then costs will rise. There may be other competing reasons why designs cannot include certain sustainability measures if housing sites are in sensitive landscape and historic locations. Alternatively there may be significant development costs associated with site specific circumstances and so viability of the site's development becomes a valid consideration. By insisting on the code for sustainable homes other policy objectives such as affordable housing at particular rates and other contributions may need to be reconsidered. Consequently, we are of the view that this policy should be drafted in a manner which enables site specific circumstances to be taken into account. As noted above the Government explains that the code is a certification requirement and does not necessarily mean that buildings are constructed in accordance with a code level.

It is also important to note that it is not the purpose of planning legislation to duplicate other legislation. In this regard, the policy should accept that the Building Regulations will be the main vehicle for implementing this policy and that unless the coding requires external development then there will be no need to specify what is to be carried out in a planning

CHAPTER 4 Policy H5 - Dwelling Types

Summary: application.
Policy H5

In support of the policy, it is advantageous that no percentages requiring a specific mix are included. This flexibility will enable developers and the Council to respond directly to changing circumstances in the local housing market. In the past some authorities have set out a percentage for the type of housing they require only to find that after a few years of strict implementation there is an oversupply of property of that type and no flexibility in the policy to address the problem.

1.0 Instruction and Introduction

1.1 Charles Planning Associates Limited (Chartered Town Planners) is Instructed by Swan Hill Homes Limited (Swan Hill) to prepare and submit representations on their behalf in respect of the Rochford District Local Development Framework: Core Strategy Submission (September 2009) Development Plan Document.

1.2 The comments refer to the relevant sections and policy designations in the Submission document, as appropriate.

1.3 The comments set out in this submission are intended to assist the District Council in taking forward its Local Development Framework. It is our intention to continue to be involved in the LDF preparation process and we look forward to the opportunity to comment further at the Examination to the Core Strategy.

1.4 If you have any queries regarding the content of this submission then please do not hesitate to contact:

Peter Kneen BSc (Hons) MSc MRTPI
Planner

2.0 Housing:
Policy H1 - The Efficient Use of Land for Housing

2.1 Swan Hill recognises the importance of seeking to concentrate new developments mainly in the existing urban areas, on previously developed land where possible, particularly in view of the Government seeking to ensure 60% of all such new developments are on previously development land (PDL).

2.2 However, given the character of the District, and the strategic housing requirement of the East of England Plan, Swan Hill supports the approach that the Council must also make provision for additional development on the edge of existing settlements on greenfield sites, particularly in the most sustainable locations. As such, Swan Hill supports that where feasible, the redevelopment of existing employment sites for residential/employment purposes can make a contribution towards the strategic housing requirement, provided that sufficient additional employment land is brought forward to ensure the stability of employment levels in the District, and to ensure employment growth meets the East of England Plan requirements.

2.3 Swan Hill considers that Policy H1 should include consideration that new extensions to existing settlements have regard to their potential impact on the wider characteristics and openness objectives of the Green Belt.

Policy H2 - Extensions to Residential Envelopes and Phasing

2.4 Swan Hill generally supports the approach taken by the Council in this policy. As set out above, Swan Hill consider the Council's acknowledgment that housing requirements should be met through the allocation of land on the edge of the existing settlements is the most suitable way forward to meeting the Council's strategic housing requirement and complies with the advice in PPS3.

2.5 The need for suitable greenfield urban extensions represents the best way forward for the Council to meet its strategic housing requirement, as set out in the East of England Plan. Swan Hill supports the recognition that the potential supply of alternative previously developed sites is limited, without detrimentally affecting the character of the District, and therefore the best way forward is the use of sustainable greenfield urban extensions to the existing settlements of the District.

2.6 However, Swan Hill consider that a fundamental consideration that the District Council should consider relates to the potential impact of the urban extensions on the Green Belt policy has been somewhat overlooked. The wider sustainability credentials of the settlements of the District should only be one of many key considerations for determining the level of expansion. In view of the proximity of Southend-on-Sea to all the main settlements of the District, and the influence this has on the likely location many people would travel for employment and leisure, sustainability of many of the settlements is not a key overarching factor, and greater weight should be placed on the potential impact on the openness of the Green Belt, as this cannot be remedied if development occurs in the wrong location.

2.7 As such, Swan Hill considers that determining the location of growth for the main settlements should be to identify

16878 Object

CHAPTER 4 Policy H6 - Lifetime Homes

those locations where the impact on the wider setting of the Green Belt can be minimised. Further justification for those general locations chosen should be identified in Policy H2. In this regard, Swan Hill has serious concerns regarding the removal of Land South West of Great Wakering as a viable option for the growth of the settlement. The development of this area of Great Wakering, in addition to the potential redevelopment of the Star Lane Industrial Estate could provide a more comprehensive development, whilst ensuring that the wider openness of the Green Belt is maintained. Land South West of Great Wakering is significantly better placed to limit the impact on the wider Green Belt than Land West of Great Wakering, and could contribute to the provision of an important amenity and wildlife site for the local community.

2.8 In addition, Swan Hill consider that the Council now has no reserve provision in the event that any of the existing employment sites set out in Policy H1 fail to come forward for development within the envisaged timescale. Further, Land West of Great Wakering has not been identified in the SHLAA as a deliverable site to help meet the strategic housing requirement, contrary to the requirement set out in PPS3.

2.9 As such, Swan Hill would support the provision of suitable sites which could be safeguarded for future development in the likelihood of a shortfall in supply.

Policy H3 - Extensions to Residential Envelopes Post 2021

2.10 As set out above, Swan Hill supports the overall approach the Council has taken towards the provision of sustainable urban extensions as a suitable means of meeting their strategic housing requirement. However, as set out for Policy H2 above, Swan Hill has serious concerns regarding the removal of several proposed sites set out in the October 2008 Preferred Options Core Strategy, without any guarantee of the ability to deliver those sites set out in Policy H1.

2.11 As also considered above, the inclusion of West of Great Wakering for 250 dwellings should not be included ahead of South West of Great Wakering, in view of the fact that the site is not identified in the SHLAA as available, suitable and achievable as required by PPS3, and thus is not supported by a robust and creditable evidence base for its inclusion as a strategic site for development.

2.12 Whilst Swan Hill acknowledge that alterations to Policy H1 has resulted in the removal of some locations for growth in Policy H3 (as set out in the Sustainability Appraisal), Swan Hill does not consider that the most appropriate locations have been chosen.

2.13 In addition to the matters raised above, the use of West of Great Wakering would also result in the loss of valuable agricultural land, which clearly in a Green Belt location, should be less suitable for development than other sites, such as South West of Great Wakering, which would have limited impact on the wider Green Belt policy, and not result in the loss of valuable agricultural land.

2.14 Finally, in respect of Policies H1, H2 and H3, all of the above comments are based on our interpretation of the Submission Version Core Strategy when compared to the October 2008 Version of the Core Strategy. Without the ability to undertake a detailed assessment of the Council's SHLAA, it is not possible to clarify the proposed Core Strategy position regarding the proposed direction of growth proposed for the settlements in the District. As such, Swan Hill reserves the right to make additional representations regarding the proposed Policies H1, H2 and H3 following the publication of the SHLAA in due course.

Policy H4 - Affordable Housing

2.15 In general terms, Swan Hill supports the approach taken by the Council towards the provision of affordable housing for new residential developments. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H5 - Dwelling Types

2.16 Swan Hill supports the policy provision of H5, and considers that the approach taken by the Council for this policy represents a suitably flexible alternative to stipulating percentages of dwelling mix, sought by some local authorities. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H6 - Lifetime Homes

2.17 In regard to this policy, Swan Hill objects to the Council's policy where all new dwellings should be provided to the Lifetime Homes Standard. Whilst it is acknowledged that the UK has an aging population, Swan Hill considers that seeking to provide Lifetime Homes on all sites is considered to be overly onerous for proposed developers, particularly when considering the requirement for all car parking spaces to be suitable for disabled users, which could result in more schemes becoming unviable. Therefore, the provision of a percentage of Lifetime Homes should be considered through negotiations with the Council at the planning application stage, and should be determined on a case-by-case basis.

3.0 Character of Place: Policy CP1 - Design

16878 Object

CHAPTER 4 Policy H6 - Lifetime Homes

3.1 The Town and Country Planning (General Development Procedure) Order 1995 (As Amended) makes the submission of a Design and Access Statement for most types of planning applications a Statutory requirement, and as such, the provision of a Design Brief represents a pre-requisite of all major planning applications.

3.2 Policy CP1 seeks to ensure the provision of good, high quality developments that reflect local characteristics and distinctiveness, this ideology is supported by Swan Hill.

4.0 The Green Belt:
Policy GB1 - Green Belt Protection

4.1 Following the amendments to the wording of the Policy since the October 2008 Preferred Options Core Strategy, Swan Hill is now generally supportive of Policy GB1 and its supporting text. However, as expressed above, it is important that where alterations to the Green Belt boundary occur as a result of the extension of the settlements to meet the strategic housing requirement, both the minimal amount of land is taken and where that land is taken for development, it represents the best available land which has a minimal impact of the wider openness characteristic of the Green Belt.

5.0 Environmental Issues:
Policy ENV3 - Flood Risk

5.1 Swan Hill generally supports the approach set out in Policy ENV3 regarding ensuring development accords with the sequential test of PPS25. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV4 - Sustainable Drainage Systems (SUDS)

5.2 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV4. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV8 - On-site Renewable and Low Carbon Energy Generation

5.3 Whilst Swan Hill recognises the importance of reducing carbon emissions, particularly in new housing developments, and the role this can play in reducing the nations overall Greenhouse emissions. As such Swan Hill is generally supportive of Policy ENV8. It is noted that Policy ENG1 of the East of England Plan sets out a threshold of developments comprising 10 or more dwellings. Swan Hill consider it important for the District Council to justify the reduction in the threshold level.

5.4 Further, no assessment of Policy ENV8 has been set out in the Sustainability Appraisal which justifies the change in threshold from that of Policy ENG1 of the RSS.

Policy ENV9 - Code for Sustainable Homes

5.5 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV9. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

6.0 Community Infrastructure, Leisure and Tourism:
Policy CLT1 - Planning Obligations and Standard Charges

6.1 Swan Hill generally supports the overall approach the Council has taken in Policy CLT1. It is considered Policy CLT1 sets out a degree of flexibility to ensure that all sites are considered on a site-by-site basis, assessing the individual merits of each planning application, in order to ensure the levels of contributions applicable meet the five tests of Circular 05/05. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policies CLT5 - Open Space;
CLT7 - Play Space;
CLT8 - Youth Facilities; and,
CLT10 - Playing Pitches

6.2 Swan Hill supports the need for new residential developments to incorporate a degree of new publicly accessible open space, children's play space, youth facilities and playing pitches, and as such, generally supports the policy approaches taken by the Council.

6.3 However, it is important that whilst the Council may seek to undertake an assessment of providing standard charges for new development, which, as set out in Policy CLT1, this should be based on thorough public consultation and consideration and sound justification. Swan Hill consider that within the provision of a standard charge, it is important that such provision allows for a degree of flexibility to ensure that each site is assessed individually and on its own merits. This is particularly important for those sites close to existing open spaces and facilities. As such, the levels of

16878 Object

CHAPTER 4 Policy H6 - Lifetime Homes

open space and recreation facilities required in the 'standard charge' should be based on an up-to-date PPG17 Open Space assessment, which should be used to form a key consideration in the levels of provision likely to be required in the standard charge system proposed.

7.0 Transport: Policy T1 - Highways

7.1 Swan Hill supports the overall objectives set out in Policy T1 requiring developments to be located and designed to reduce the reliance on the private car and to meet the infrastructure needs generated by development or seek to help achieve these needs is acceptable in principle.

7.2 Swan Hill recognises the importance of providing sufficient infrastructure provision to meet the requirements of development, and that where developments have insufficient consideration of impact on existing infrastructure, they should be considered unacceptable and contrary to National policy guidance. However, Swan Hill considers it important to emphasise that the developer's role should not be seen as a means to meet existing shortfalls in provision.

Policy T3 - Public Transport

7.3 Swan Hill is generally supportive of the policy approach set out in T3, however, as set out in paragraph 7.2 above, it is important that the District Council do not consider that it is the developer's responsibility to resolve existing shortfalls in provision of public transport, and any contribution towards additional public transportation provision should only be to mitigate against the additional level of demand likely from the development proposed.

Policy T5 - Cycling and Walking

7.4 Swan Hill supports the general approach to this policy, as Swan Hill recognises the importance of promoting the use of alternatives to the private car. The policy provision acknowledges the need to ensure relevant contributions in the event of additional travel demands generated by individual developments, whilst also setting out additional aspirations for the cycle network in the District.

7.5 As such, Swan Hill considers this policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy T8 - Parking Standards

7.6 The Council has recently (January 2007) adopted SPD on the requirements for parking standards, and as such, Swan Hill generally supports the policy approach chosen by the Council. As set out in the SPD, whilst Swan Hill generally supports the approach taken by the District Council towards setting residential parking standards, in that the Council has recognised that in the suburban areas, even with some access to public transport, the majority of residents will rely on the use of private cars. However, Swan Hill has concerns over the failure of the District Council to comply with the provisions of PPG13: Transport (2001) which sets out that Local Planning Authorities should not set minimum standards for car parking. Whilst it is acknowledged that PPS3 sets out provision for the consideration of local circumstances, it is considered that the Council has not justified this deviation from PPG13's maximum standard.

7.7 Whilst it is acknowledged that such justification may become apparent through the work currently being undertaken by Essex County Council, until such time, the District Council should only seek to apply the maximum standards indicated in PPG13. However, Swan Hill recommends that the District Council make provisions in the wording of the Policy to allow for changes in the event that future policy on car parking standards need to reflect the County standard, following the completion of the County Council review.

8.0 Economic Development: Policies ED3 - Existing Employment Land ED4 - Future Employment Allocations

8.1 In respect of Policies ED3 and ED4, Swan Hill notes that they have changed considerably since the October 2008 Preferred Options document, in that they are site specific regarding the location of the proposed redevelopment of existing employment sites. These four sites are also identified in Policy H1 - Efficient Use of Land, and in general, Swan Hill supports the approach to the redevelopment of these sites (where feasible) based on the assessments of the sites set out in this version of the Core Strategy.

8.2 However, Swan Hill has concerns that these policies might not be considered suitably sound given that insufficient opportunity has been allocated for consultation on their redevelopment. Without the SHLAA being publically available prior to the consultation on this Core Strategy, an insufficient evidence base has been provided to corroborate that these sites are neither suitable or deliverable to meet the test of soundness requirements.

Summary:

Policy H6 - Lifetime Homes

2.17 In regard to this policy, Swan Hill objects to the Council's policy where all new dwellings should be provided to the Lifetime Homes Standard. Whilst it is acknowledged that the UK has an aging population, Swan Hill considers that

Core Strategy Submission Document

Full Text:

In allocating pitches the Council will examine the potential of current unauthorised sites to meet this need and will consider granting them planning consent subject to advice in Circular 1/2006. Sites will be allocated in the west of the District, where transport links and access to services are better.
UNSOUND due to contradiction in terms. The Council are saying "they will examine the potential of current unauthorised sites" yet on the other hand the statement is that "Sites will be allocated in the west of the District" As there is only one site in the west of the district the councils determination has already been made and presumably no other examinations will be made.

Summary:

Sites allocation: West of the District.
UNSOUND. Contradiction. Council say "they will examine the potential of current unauthorised sites", contradicted by "Sites will be allocated in the WEST of District" With only one site in west, Council's determination has already been made. Presumably no other examinations are envisaged.

Change to Plan

Remove the determination that sites will be allocated in the west of the district

Full Text:

LDF - Preferred Options - Rayleigh conurbation.

On behalf of Rawreth Parish Council I confirm that this letter is a formal response of objection to the final draft of Rochford District Councils Core Strategy Preferred Options document.

Firstly, at no time has the Parish of Rawreth been included or mentioned in any "Tier" on page 33 of the document, the criteria for allocation of houses - within the Core Strategy. If it had been included it should have been in Tier 4 and this is, therefore, UNSOUND.

The Parish Council believes that to develop 550 houses in one place within area no: 144, land to the north of London Road and then to add a further 220 to the Rawreth Industrial Estate area will totally destroy the character and rural outlook of Rawreth and surrounding areas. It will destroy the residents' "strong sense of identity within their own settlement" and is, therefore, UNSOUND.

The huge development of 550 houses is totally unacceptable. The land north of London Road is good quality agricultural land which is protected by the Green Belt -GB1 - fulfils all purposes under PPG2 and should be retained as such. Once used for development this land can never be returned to agricultural use, and if you continue to erode into our Green Belt and farmland it will be lost forever.

The Parish Council believe a proportion of the houses required to be built in our area should compliment and enhance Rawreth, cause as little extra congestion to our already heavily overcrowded roads as possible and provide a pleasant environment for those people wishing to move to the area. This particular area is part of the "Gateway to Rochford" and is the "strategic buffer" between Rayleigh and Wickford. Reference is made in the Core Strategy document to "avoiding coalescence" of villages/towns, however a development of this size immediately erodes the buffer between Rayleigh, Rawreth and Wickford, starts coalescence, destroys the rural character of Rawreth and, therefore, is UNSOUND.

The Core Strategy Document details Rochford District Councils priorities and objectives and details how the role of the Core Strategy features in achieving these. In support of the Parish Councils observations and alternative proposals they comment as follows.

Page 5 "Fostering greater community cohesion"

Development of land between Rawreth Lane and north of London Road will not give any community cohesion at all, it will simply be an extension to the west of Rayleigh giving residents no real sense of belonging, they will live within the Parish of Rawreth, yet they will be considered as living in Rayleigh as has been proved with other developments along Rawreth Lane such as Laburnum Way.

Page 12 "Priority 5 Essex roads are safer less congested and everyone has access to essential services"

The roads and infrastructure in the Rawreth area are completely full to capacity. The A127, A1245, A129 London Road, Rawreth Lane and Watery Lane just cannot take any more traffic and the proposed development on land to the north of London Road will increase traffic to a completely unsustainable level. On numerous occasions this year incidents within and on the outskirts of the Parish have brought traffic to a standstill for hours along London Road, Rawreth Lane, Watery Lane/Beeches Road and the Hullbridge Road. It took some residents 1 ¼ hours to proceed along Rawreth Lane and into Hullbridge - a distance of 1 1/2 miles.

The proposed development at the western edge of Hullbridge, which is, in fact, largely in Rawreth would also greatly increase the traffic problems in the area. Rawreth Parish Council understand there would be a proposal to "widen/straighten" Watery Lane/Beeches Road, with a roundabout at the junction with the Hullbridge Road. This is an extremely dangerous junction even at the present time and would become increasingly so. There is also the question of where the traffic would go when it reaches Battlesbridge at the Western end, it cannot possibly cross the Bridge as this is "restricted" and in a Conservation Area, therefore, it would have to turn left and proceed to the A1245 - a very dangerous junction.

Beeches Road/Watery Lane is also shown in the document as a new cyclist route. Surely this is a conflict of interest, a road widening/straightening proposal coupled with a cycle route.

Page 33 "Tier Settlements"

Nowhere in the Core Strategy Document is Rawreth Parish actually mentioned, it features in the "all other settlements tier 4" and is referred to as "land north of London Road Rayleigh" or "West Rayleigh" yet, the housing allocation of 550 dwellings between 2015 and 2021 and the 220 planned for the Rawreth Industrial Estate is the largest that any area is taking. Rawreth Parish currently has 380 dwellings and an electorate of 812, yet the proposed housing figures are set to increase the overall number of dwellings in the Parish by 203%.

Pages 34 to 36 "The efficient use of land for housing" and "Extensions to residential envelopes and phasing"

The Core Strategy Document states that "the Council recognises the importance of making best use of brownfield land" and "whilst the Council acknowledge that the housing requirement stipulated in the East of England Plan is a minimum, it must also be mindful of the need to maintain Green Belt as far as possible" yet the proposed 550 houses on the land

16472 Object

CHAPTER 4 Policy H7 - Gypsy and Traveller Accommodation

north of London Road will all be built on Green Belt land of high agricultural value. The document states that "the Council will direct development to the most sustainable locations on the edge of settlements having regard to:"

"The potential to avoid areas of constraint (such as areas at risk of flooding, sites of ecological importance"

"The historical, agricultural and ecological value of land"

"The potential to create a defensible Green Belt Boundary and

"The avoidance of coalescence with neighbouring settlements"

Yet these key factors all seem to have been ignored when choosing the site to the north of London Road and, therefore, the proposal is UNSOUND. The Parish of Rawreth has a history of flooding, the land in Rawreth Lane will drain into the already overloaded brook system and the Services in the area would be unable to cope with this increase in housing - drains and sewers are already working to capacity. Heavy rain earlier in the year resulted in flooding in Watery Lane and the Rawreth Brook system has been very close to flooding twice already this year. During a meeting between the Parish Council and the Environment Agency we were advised that this situation will worsen with increased housing.

Page 42 "Gypsy and Traveller Accommodation"

This section details the need for an allocation of 15 pitches by 2011, it also states that they "will examine the potential of current unauthorised sites to meet this need" and that "sites will be allocated in the west of the District" The west of the District is in fact Rawreth, but yet again the Parish name has not been detailed. The Parish already has an unauthorised site which is the subject of an enforcement case and although well kept is on the brow of a hill on a main highway with restricted access which Essex County Council have already raised concerns about, this is not a site that should be considered as part of the requirement due to its location, but also, why is the allocation of all 15 pitches being detailed to one area?

Page 43 to 44 "Appendix 1"

Details of all the infrastructure to accompany residential development is listed, yet there are no detailed costs, have these been done? And are these achievable? Large numbers of housing in one area, as stated in the infrastructure requirements, will necessitate a new primary school. County figures suggest that there will be surplus places in Rayleigh schools even with new housing. Obviously these will be in the wrong parts of the town so increasing the risk that an existing school could close. It makes sense to spread the development in smaller sites around the town, avoiding closure and preventing unnecessary provision of a new school.

Page 57 "Strategies, Activities and Actions - The Green Belt"

The document states that "The Council will continue to support the principals of restricting development in the Green Belt, as set out in PPG2 and will preserve the character and openness of the Green Belt" it further states that "a small proportion of the District's Green Belt will have to have its designation reviewed to allow development" The entire development of 550 houses planned for land north of London Road is all on Green Belt land as is the land at Hullbridge, how does this equate to a "small proportion"?

The Councils own Policy GB1- Green Belt Protection states "The Council will allocate the minimum amount of Green Belt land necessary to meet the District's housing and employment needs" and that they will "direct development away from the Green Belt as far as is practicable and will prioritise the protection of the Green Belt land based on how well the land helps achieve the purposes of the Green Belt".

This area of land confirms all 5 purposes of the national PPG2 - Green Belt:-

It prevents the unrestricted sprawl of western Rayleigh

It provides a barrier to prevent the ultimate merging of Rayleigh, Rawreth and Wickford

It assists in safeguarding the countryside from encroachment

It preserves the setting and special character of historic towns

Assists in urban regeneration, by encouraging the recycling of derelict and other urban land

Rawreth Parish Council have observed that there are a number of sites that were put forward in the "Call for Sites" that are pre-used brownfield land in the Green Belt land, and as such would prove beneficial and in their opinion should have been considered for development. Their non-inclusion as "brownfield" sites makes the current proposals

UNSOUND:

Site No; 73 Hambro Nursery a site of approximately 3.93 hectares, coupled with the adjacent site Clovelly, would provide between 200 and 250 houses in an area of approximately 4.85 hectares this area would have good access directly from the A1245 and if expanded north westward to include land up to and around the Village Hall, approximately another 2.08 hectares could produce between 50 and 80 further houses. This area could be accessed either from the slip road (Chelmsford Road) to the south of the Nevendon Garage or from Church Road.

Both of these sites would remove the need for extra traffic along the A129 and Rawreth Lane which are both already operating well over maximum capacity. This development would require a footbridge for pedestrians, cyclists and horses over the A1245.

Rawreth Parish Council believe these proposals would be sensible infill of these areas and would be on "Brownfield" sites where current businesses are not particularly progressive and would not result in the loss of many jobs. Our figures are quite conservative and we believe that if these sites were chosen a much reduced number of houses would need to be built "North of London Road" on Green Belt land.

Phase 2 - With regard to the houses that are proposed for the Northeast corner of Rawreth/Hullbridge, the Parish Council are concerned that any development would cause considerable extra congestion to the immediate roads. We understand that the thoughts are to "straighten" and improve parts of Watery Lane and Beeches Road to provide access to and through Battlesbridge - a conservation area. Recent experience of deep flooding in Watery Lane with the road closed for several days on 3 occasions in the early part of 2009 proves that this proposal is completely unsustainable. The local drainage systems simply cannot take the amount of run-off experienced now and with further development this

Core Strategy Submission Document

16472 Object

CHAPTER 4 Policy H7 - Gypsy and Traveller Accommodation

would increase the problem.

If this development is to go ahead, the Parish Council believe that a relief road should be built, from the end of Watery Lane, skirting to the west of the Rayleigh Park Estate, crossing Rawreth Lane at a mini-roundabout and entering a vastly improved A129 at approximately Lower Barn Farm. This would take any necessary traffic in and out of the area efficiently.

The Parish Council further believe that the Michelins Farm site No: 49 would be an ideal site for the Rawreth Industrial Estate. This would adjoin proposed industrial sites within the Basildon District and would provide excellent road and transport links. Rawreth Parish Council also proposed that the land opposite Michelins Farm could be used to re-site the illegal Gypsy/Traveller site that is currently situated on the busy A1245. The land opposite Michelins Farm would not only be a much safer site for Gypsy/Traveller pitches, but the correct use of the land would also ensure the environmental improvement of the site as a whole.

All of the above proposals were submitted to Rochford District Council, but they were not taken into consideration in the final draft resulting in the predominant use of Green Belt land for development, bounded by already congested roads and, therefore, the proposals are UNSOUND.

Summary:

Page 42 "Gypsy and Traveller Accommodation"

This section details the need for an allocation of 15 pitches by 2011, it also states that they "will examine the potential of current unauthorised sites to meet this need" and that "sites will be allocated in the west of the District" The west of the District is in fact Rawreth, but yet again the Parish name has not been detailed. Full Text: against the overbuilding of Rayleigh - another primary school but no senior school! You knocked down Park School to build more houses - no new senior school though.

I am interested to know where all these children will go to school? Surely town planners should always factor in new senior schools when building thousands of houses.

In all my time in Rayleigh (45 years) only two senior schools have been in existence namely Sweyne and Fitzimarc (although have to admit there was briefly a third one - Park School which you knocked down for more houses). There appears to be no forward planning in your ideas for Rayleigh as the more houses you build, the more primary schools you will need and the more senior schools are required - simply maths I would have thought.

Summary:

People are fed up with every spare blade of grass being build upon. One house knocked down and two/three more in its place - planning laws need to be tightened up as there were originally set up for sounds reasons to prevent over-development of areas and loss of green belt.

Change to Plan

Full Text: PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs nor, especially, costs have been identified and the Core Strategy is therefore unsound.

The district's highways suffer from years of under investment and over use. The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. It is therefore unclear if use of Standard Charges is financially viable.

Policy T2 provides a list of required highway improvements. The list contains most of the more major roads in the District including Rectory Lane, which has a single track, traffic light controlled railway bridge. 1200 dwellings are proposed for the northern end of Rectory Road and a further 175 at the southern end. The cost of addressing the railway bridge bottleneck will be significant but is not mentioned.

No attempt is made to either cost these charges or explain how improvements not linked to any one specific development will be paid for (eg B1013; Ashingdon Road; a network of walking, cycling, bridleways).

The concept of paying for improvements through use of Standard Charges is totally unproven and unsound.

Summary: PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs nor, especially, costs have been identified and the Core Strategy is therefore unsound.

The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. It is therefore unclear if use of Standard Charges is financially viable.

Full Text: ROCHFORD DISTRICT COUNCIL - LOCAL DEVELOPMENT FRAMEWORK CORE STRATEGY SUBMISSION
SEPTEMBER 2009

Icen Projects Ltd (Icen) has been instructed by Colonnade Land LLP (Colonnade) to submit representations to the Rochford Local Development Framework Core Strategy Submission (CSS).

a) Overview

It is our conclusion that the CSS is not justified, effective or consistent with national policy, as required by Planning Policy Statement 12: Creating Strong Safe and Prosperous Communities through Local Spatial Planning (PPS12) and is therefore vulnerable to being found unsound by an Inspector through the Examination in Public.

b) Background and Summary

These representations follow those made by Icen on behalf of Colonnade to the Preferred Options Core Strategy, submitted via letter dated 17 December 2008. In this regard, we would request that the Council confirms that the representations made to the Preferred Options Core Strategy will be taken into account alongside the current representations, particularly as there are a number of cross references between the two sets of representations.

It is not considered necessary to reiterate the content of the previous representations, as they were made at the appropriate stage and will be considered by the Planning Inspectorate in due course, but it is inevitable that certain elements will require restating where it is not clear that they have been taken into account in the production of the CSS. For clarity, therefore, Colonnade feel that it is appropriate to clarify the 'in-principle' issues that were raised in the representations to the Preferred Options Core Strategy, recognising that these issues were raised in the context of a wider and more coherent justification made within the representations:

- â€¢ Further cross-referencing of the recommendations made within the evidence base is required;
- â€¢ Greater focus should be placed on promoting Rochford as the principal settlement within the District;
- â€¢ Coombes Farm is the most logical location for residential development abutting the urban area of Rochford and as such warrants recognition as a general location for residential development;
- â€¢ The allocation of Three Ashes Farm for employment generating uses will be pursued;
- â€¢ Recognition that it is not realistic to expect residential allocations to be met mainly on Brownfield sites, nor should the intensification of smaller sites in residential areas be pursued;
- â€¢ Many of the sites identified as suitable for residential development will not be viable and will not come forward for development within the timescales anticipated;
- â€¢ The failure to provide the necessary justification for the proposed infrastructure improvements sought in Appendix H1;
- â€¢ The inclusion of an affordable housing exception policy was sought; and
- â€¢ The need to identify sites capable of delivering employment growth in the short term.

Following assessment of the CSS presented by the Council for consultation prior to submission to the Secretary of State, Colonnade considers the Plan to be 'unsound' as the document consistently fails to meet the tests of soundness set out in the table following Paragraph 4.52 of PPS12. For clarity, PPS12 confirms that to be 'sound' a Core Strategy should be JUSTIFIED, EFFECTIVE and consistent with NATIONAL POLICY and defines 'justified' as "founded on a robust and credible evidence base" and "the most appropriate strategy when considered against the reasonable alternatives" and 'effective' as "deliverable", "flexible" and "able to be monitored".

The rationale for the above is identified in the remainder of these representations, which are provided in the interests of ensuring the Council delivers a strong, robust and logical Core Strategy that guides the future development of the District in a justified and effective manner.

b) Colonnade

As the Council is aware from previous submissions to the Local Development Framework, Colonnade is a strategic land company with a particular interest in the future development of the District as a consequence of a number of sites that it controls, particularly around Rochford.

The Council will also be aware that Colonnade has recently submitted an outline planning application for the residential development of the land at Coombes Farm, Rochford to provide a sustainable urban extension comprising up to 326

16251 Object

CHAPTER 4 Appendix H1

residential dwellings, with associated accesses and community uses. Whilst the planning application process is clearly separate from the Local Development Framework production process, Colonnade wishes to continue the promotion of the site as a suitable location for residential development.

Accordingly, these representations focus on the legal requirements and tests of soundness associated principally with the Housing and Employment chapters of the CSS, with reference where appropriate to the sites that are controlled by Colonnade, the outline planning application at Coombes Farm and other issues where relevant.

c) Housing

i. Date of Adoption

The CSS assumes an adoption date of 2010 and plans for the provision of housing to 2025.

Taking account of the potential delays to the adoption of the Plan, including the Examination process, it would be more appropriate for the CSS to provide sufficient flexibility to allow for delays in its adoption. Colonnade considers an adoption date of 2011 for the CSS is a more realistic target.

Taking account of the advice in Paragraph 4.13 of PPS12, which states that the time horizon for the Core Strategy should be "at least 15 years from the date of adoption" it would be appropriate for the CSS to plan for the provision of housing to 2026 at the earliest. As such, Colonnade does not consider the CSS to be 'flexible' in the context of the tests of soundness in the table following Paragraph 4.52 of PPS12.

ii. Housing Delivery

However, setting the above aside, the Housing Chapter identifies the minimum housing delivery target for the period 2001 to 2021 of 4,600 dwellings as set out in the East of England Plan, with the annual average requirement of 250 dwellings per annum to extend provision from 2021 to 2025. It also confirms that the residual target for the period 2006 to 2021 is 3,790 dwellings, taking account of the delivery of 810 dwellings in the period 2001 to 2006, and a further 618 dwellings have been completed between 2006 and 2008.

This leaves a residual housing provision target of a minimum of 3,172 dwellings in the period 2008 to 2021. Taking into account the required provision beyond 2021, the residual housing provision target in the period 2008 to 2025 is a minimum of 4,172 dwellings. The disparity between these figures and those provided within the CSS are explained by the rounding down of the annual average delivery requirement in the period 2006 to 2021 to 250 dwellings per annum, compared with the actual figure of 252.67.

The table at Paragraph 4.6 of the CSS identifies the source of housing provision that will meet the identified minimum requirements and includes figures for 'Extant Planning Permissions' and 'Existing allocations/other appropriate sites identified in Strategic Housing Land Availability Assessment'. These figures, along with the actual completions within the period are combined to produce the figure for the 'Total without Green Belt release' figure.

Setting aside the concern regarding under-provision associated with the rounding down of the annual average delivery requirement in the period 2006 to 2021, the CSS fails to identify the sites that will contribute to the 'Extant Planning Permissions' provision. The identification of the sites that will contribute to the 'Extant Planning Permissions' should be provided in the context of the findings of the Inspector in the appeal by Asprey Homes [APP/G5180/A/07/2043219/NWF] who determined that the reliance on a delivery rate of 100% is unsafe [IR287].

Furthermore, at the time of writing these representations, the Strategic Housing Land Availability Assessment 2009 has not been published. It is impossible therefore for a full assessment of the proposed housing provision to be undertaken to confirm whether the CSS is 'founded on a robust and credible evidence base' [test of soundness in the table following Paragraph 4.52 of PPS12].

iii. Redevelopment of Employment Sites

Paragraph 4.14 of the CSS refers to the identification of the four employment sites that are considered by the Council to be suitable for redevelopment to residential use. However, the failure to publish the Strategic Housing Land Availability Assessment 2009 either before or alongside the publication of the CSS means that the assumptions made by the Council as to the suitability, availability, viability and deliverability of the sites cannot be assessed.

It has been necessary, therefore, to review the assumptions made in the Rochford Urban Capacity Study 2007 (UCS) regarding the sites. Within the section of the UCS entitled 'Redevelopment of Established Employment Land' [pages 22 & 23] includes a list of those sites assessed, their indicative capacities and the probability of residential development coming forward at the sites within the plan period (identified elsewhere as 2001 - 2021). The list includes the four sites identified in the CSS of Eldon Way/Foundry Estate, Hockley; Rawreth Lane Industrial Estate, Rayleigh; Stambridge Mills; and Star Lane Industrial Estate, Great Wakering.

In total, the UCS identifies an indicative residential redevelopment capacity of 486 units on the four sites (118, 220, 60 and 88 respectively). Of these, it identifies the Rawreth Lane Industrial Estate and Stambridge Mills as having a 'high'

16251 Object

CHAPTER 4 Appendix H1

probability of coming forward for development in the Plan period (2001 - 2021), which would deliver 280 residential dwellings using the Council's own figures. The Star Lane Industrial Estate (referred to in the UCS as the Star Lane Brickworks) is identified as having a 'medium' probability of coming forward for development in the Plan period, with capacity to deliver 88 residential dwellings. It is unclear, therefore, where the figure for 'Existing allocations/other appropriate sites identified in Strategic Housing Land Availability Assessment'.

Set against this is the identification of these four sites in the CSS as being capable of delivery for residential development within the Plan period, with 671 units delivered between 2006 and 2015 and a further 506 units between 2015 and 2021.

The UCS also states in the same section that:

"There are considerable areas of land in the district that are currently allocated for, and in use as, employment land. The redevelopment of such sites for residential use would reduce demand for residential development on greenfield sites, but would at the same time create a need for alternative sites to be found for employment. Such an approach, which would be likely to require the decontamination of existing employment land to make it fit for residential use, together with development of a greenfield site and implementation of additional infrastructure to serve the new employment area, may well be unsustainable." [our emphasis]

The UCS appears to confirm therefore, that not only would the redevelopment of the four sites listed in the CSS be unlikely within the Plan period, but also potentially unsustainable. In this regard, it is notable that the promoters of Stambridge Mills sought the Screening Opinion of the Council as to whether Environmental Impact Assessment of the planning application for the redevelopment of the site for residential use was required in 2007, but to date are yet to submit a planning application for the redevelopment of the site.

In light of this, Colonnade does not consider the CSS is 'the most appropriate strategy when considered against the reasonable alternatives' [test of soundness in the table following Paragraph 4.52 of PPS12], which include the provision of residential development in East Rochford.

iv. Strategic Housing Growth to the East of Rochford

Furthermore, whilst paragraph 2.62 of the CSS identifies concern relating to the identification of locations to the east of Rochford for development on the basis that 'vehicular movements would inevitably be directed through Rochford's historic core', the CSS later identifies Stambridge Mills as a suitable site for residential redevelopment.

In light of the evident conflicts between the evidence base provided in support of the CSS and the absence of other evidence, the CSS is not considered 'sound' in the context of the tests of soundness in the table following Paragraph 4.52 of PPS12.

v. Housing Trajectory

Paragraph 4.28 of the CSS confirms that policies H1, H2 and H3 of the CSS will deliver housing supply as illustrated in the Housing Trajectory at Appendix H2. This Housing Trajectory is transposed from the 2008 Annual Monitoring Report (AMR).

Whilst on the face of it, the Housing Trajectory appears to confirm that the Council can meet its requirement to identify a five year housing supply, many of the sites identified within the AMR do not conform to the guidance issued by CLG in August 2008, on the assessment of a five year land supply. The guidance identifies sites that can be included within the five year assessment of housing supply as:

"those that are allocated for housing in the Development Plan, sites that have planning permission (outline or full planning permission that has not been implemented) and specific, unallocated brownfield sites that have the potential to make a significant contribution to housing delivery during the 5 year period".

Table 4.10: Projected Net Completions of the AMR confirms that the five year housing land supply figure includes sites from 'other land allocated for residential purposes', which are based on land allocations outside existing settlements. However, it should be clarified that these land allocations are not currently allocated for housing development in an adopted Development Plan. As such, these unallocated greenfield sites that are yet to make significant progress through the planning system should be discounted and the five year housing land supply recalculated.

The table below has been prepared to confirm the extent of the shortfall should the sites from 'other land allocated for residential purposes' be removed from the calculation of the Rochford five year housing land supply, in accordance with the guidance issued by CLG:

Recalculated Five Year Housing Land Supply (2009 - 2014):

Year
1st April 2009 to 31st March 2010
Predicted Delivery (A)

Core Strategy Submission Document

16251 Object

CHAPTER 4 Appendix H1

106 dwellings
Allocations on 'other land allocated for residential purposes' (B)
0
Residual delivery (A-B)
106 dwellings
Delivery Shortfall
0

Year
1st April 2010 to 31st March 2011
Predicted Delivery (A)
217 dwellings
Allocations on 'other land allocated for residential purposes' (B)
150
Residual delivery (A-B)
67 dwellings
Delivery Shortfall
150

Year
1st April 2011 to 31st March 2012
Predicted Delivery (A)
544 dwellings
Allocations on 'other land allocated for residential purposes' (B)
300
Residual delivery (A-B)
244 dwellings
Delivery Shortfall
300

Year
1st April 2012 to 31st March 2013
Predicted Delivery (A)
395 dwellings
Allocations on 'other land allocated for residential purposes' (B)
375
Residual delivery (A-B)
20 dwellings
Delivery Shortfall
375

Year
1st April 2013 to 31st March 2014
Predicted Delivery (A)
300 dwellings
Allocations on 'other land allocated for residential purposes' (B)
300
Residual delivery (A-B)
0 dwellings
Delivery Shortfall
300

TOTAL

Predicted Delivery (A)
1,562 dwellings

Allocations on 'other land allocated for residential purposes' (B)
1,125 dwellings

Residual delivery (A-B)
437 dwellings

Delivery Shortfall
1,125 dwellings

The above table confirms that the removal of the 'other land allocated for residential purposes' from the calculation of the Rochford five year housing land supply leaves the Council with a minimum net additional housing delivery of 437 dwellings, which equates to a supply of 1.7 years based on the adjusted annual delivery target of a minimum of 255 net

16251 Object

CHAPTER 4 Appendix H1

additional dwellings per annum. As such, the Council is failing to meet its requirement to demonstrate a five year housing land supply in accordance with PPS3 and the supporting guidance provided by CLG. It is notable that the recent application by David Wilson Homes at Land between Main Road and Rectory Road and Clements Hall Way, Hawkwell identifies an even greater shortfall in the Council's five year housing land supply.

In addition to the above, the AMR does not include a commentary on how deliverability has been assessed against the requirements of paragraph 54 of PPS3.

Furthermore, the guidance from CLG confirms that the windfall sites cannot be relied upon in demonstrating a five year supply unless a Local Planning Authority can demonstrate genuine local circumstances exist to allow this exception. However, the second paragraph of the section entitled 'Housing Trajectory and Five Year Housing Supply' confirms that the estimated completions in the years 2008 to 2013 includes estimated yields through 'intensification' coming forward in future years. With reference to the definition of 'intensification' on page 13 of the AMR, it appears that the 'Housing Trajectory and Five Year Housing Supply' also includes provision for windfall sites. As such, the Council is required to demonstrate the 'genuine local circumstances exist to allow this exception'.

The pressures on delivery and need for additional sites are more acute when it is considered that an average delivery rate of 204 dwellings per annum was achieved during a strong period of housing market growth. In view of the current economic downturn, and significant problems faced within the housing market, the Council should seek to identify appropriate and deliverable sites to meet its regional housing target provision commitments. Suitable sites would include Coombes Farm, which has been positively promoted for development through the LDF process.

It may, therefore, be more appropriate for the Council not merely to allocate sufficient sites to meet the minimum targets set down by the East of England Plan, but to identify a reservoir of land capable of coming forward for development should the sites identified through the CSS and Allocations Development Plan Documents (DPD) fail to come forward for development within the anticipated timescales.

vi. Appendix H1

As set out in the representations to the Preferred Options Core Strategy, there is continuing concern that the list of improvements to infrastructure required in support of residential development as set out in Appendix H1 fails to provide the necessary justification for its inclusion. Whilst the preamble seeks to clarify why the infrastructure is sought, the inclusion of this list should be fully justified, otherwise it is of little value. Furthermore, it would be of benefit to provide further details of the existing community infrastructure provision and capacity within the evidence base.

The failure to provide the necessary justification for its inclusion means that the CSS will not be 'founded on a robust and credible evidence base' [test of soundness in the table following Paragraph 4.52 of PPS12].

d) Character of Place

As set out in the representations to the Preferred Options Core Strategy, Colonnade considers that, with respect to the requirement to produce and adhere to Development Briefs for large residential developments, as set out in Policy CP1, the Council should not seek to impose further demands on developers where existing regulations provide sufficient requirements regarding design. In this instance, Design and Access Statements provide sufficient design guidelines for developments and there is no additional information provided in the policy or supporting text that clearly sets out the justification for this requirement.

e) Green Belt

With reference to the comments regarding the redevelopment of employment sites under the 'Housing' section above and the requirement to allocate sufficient land to meet the minimum housing provision targets as required by the East of England Plan, Colonnade considers that the chapter on Green Belt, and policy GB1 in particular, fails to provide the necessary evidence base that will allow it to be monitored effectively.

It is inherent that the proposed redevelopment of previously developed employment sites for residential use in order to reduce the requirement to allocate previously undeveloped land for residential use will displace these employment uses. In turn, therefore, the separate allocation of previously undeveloped Green Belt to accommodate the compensatory employment provision is required. This is accepted in principle at paragraph 11.11 of the CSS.

Without providing clarification of the anticipated quantum of land required to accommodate the provision of housing and compensatory and new employment land, it is not possible to monitor the performance of policy GB1.

However, using the Council's figures in the table setting out the breakdown of the housing provision figures in Chapter 4 of the CSS (assuming that actual completions and extant permissions are all on previously developed land), setting aside the displacement of employment uses referred to above, approximately 42% of the required minimum housing provision target is capable of being accommodated on previously developed land (2,005 units from a total of 4,750). As such, the Council is required to provide at least 58% of the required minimum housing provision target on the Green Belt (2,745 units from a total of 4,750).

16251 Object

CHAPTER 4 Appendix H1

If these figures are adjusted to take account of the displacement of employment uses (assuming the provision of an equal quantity of land is required to compensate for the employment land that is redeveloped), this figure changes to 17.5% on previously developed land and 82.5% on Green Belt (828 and 3,922 units from a total of 4,750 respectively). Even allowing for the achievement of higher densities of employment on new developments, the figures above are unlikely to change significantly.

Furthermore, the table in Chapter 4 also confirms that no previously developed land will be available for development beyond 2021, or 2015 if account is taken of the displacement of the employment uses.

In light of this, not only does Chapter 6 fail to provide the necessary evidence base that will allow it to be monitored effectively, it is also necessary to consider whether it presents the most appropriate strategy for addressing the required release of Green Belt land to accommodate the defined housing and employment delivery targets to 2025 and beyond as necessary. Colonnade considers a more robust approach that is flexible and capable of being monitored, would be to clearly identify those sites capable of delivery in the short term, which for the avoidance of doubt includes those sites being promoted by Colonnade, with a reservoir of alternative sites set aside for future growth.

As set out in the representations to the Preferred Options Core Strategy, Colonnade considers that the inclusion of an affordable housing exception policy within the CSS will aid the delivery of community housing within rural areas. However, the CSS does not contain such a policy, or adequately address the issue of community housing within rural areas and the CSS is not considered to provide sufficient flexibility to allow for the delivery of essential rural housing.

f) Environmental Issues

Colonnade has concerns regarding the justification for and effectiveness of a number of the policies contained within the Environmental Issues chapter, as follows:

â€¢ Policy ENV1: The Council fails to identify how it will "maintain, restore and enhance" the sites of nature conservation importance that are identified, or how the performance of this policy will be monitored;

â€¢ Policy ENV3: In the context of the advice at paragraph 4.32 of PPS12 regarding the reformulation of national policies, Colonnade does not consider that this policy is required; and

â€¢ Policy ENV9: As set out in the representations to the Preferred Options Core Strategy, Colonnade does not consider that the necessary evidence base has been provided to justify a policy that seeks to go above and beyond the policy targets for the Code for Sustainable Homes as set out by Central Government.

g) Community Infrastructure, Leisure and Tourism

Policy CLT1 refers to the requirement for residential and employment development to contribute to the infrastructure identified in Appendix CLT1 through Standard Charges.

However, whilst the general principle of securing planning obligations through the application of standard charges is broadly accepted, the list of infrastructure requirements set out in Appendix CLT1 is not supported by sufficient evidence base to identify its robustness and credibility. As such, Colonnade does not consider either policy CLT1 or Appendix CLT1 is justified in the context of PPS12.

It is also noted that, despite the clarification sought by Colonnade at the Core Strategy Preferred Options stage, the CSS fails to confirm what information should be contained within Health Impact Assessments, which are required by policy CLT4. Once again, Colonnade requests further clarification of what is involved in the assessment and the expected outputs, which will provide greater clarity and will allow the policy to be monitored.

h) Transport

Policy T8 confirms that the Council will apply minimum parking standards. As set out in the representations to the Preferred Options Core Strategy, the guidance in Planning Policy Guidance Note 13: Transport (PPG13) is clear regarding the imposition of parking standards.

Paragraphs 52-56 of PPG13 confirm that the Local Planning Authorities should apply maximum not minimum parking standards. In order to satisfy the legal requirements set out in PPS12, the policy must reflect PPG13 to promote sustainable transport choices and further provide incentives for developers to locate further residential land closer to local service centres by requiring maximum parking standards for residential developments.

i) Economic Development

As set out in the representations to the Preferred Options Core Strategy, the land at Three Ashes Farm provides an excellent opportunity to deliver employment growth in the short term and may be a suitable site for the 'Eco-Innovation Centre' that is being promoted by the Council. Its identification as a suitable location for strategic employment growth, or the provision of an Eco-Innovation Centre, would accord with the general principles of the policies contained within Chapter 11.

Core Strategy Submission Document

16251 Object

CHAPTER 4 Appendix H1

The identification of Purdeys Industrial Estate as fit for purpose (in paragraph 11.32 and the Council's 2008 Employment Land Study 2008) and therefore it should be maintained and if possible expanded, is welcomed and Colonnade considers that Three Ashes Farm could deliver this expansion, providing a natural extension to Purdeys Industrial Estate and being strategically located close to the Airport.

Three Ashes would address the negative impacts that the nearby residential area experiences from the existing Industrial Estate by providing a buffer between established uses and the residential area with less intensive employment activities. The highways analysis that has been carried out has suggested that it would not have an adverse impact on roads and congestion. Furthermore, there are very few opportunities for businesses to expand and Three Ashes could provide this opportunity.

j) Conclusions

Following the submission of representations to the Preferred Options Core Strategy, Colonnade is disappointed to note that the CSS fails to take account of the majority of the issues raised in their representations.

In addition, Colonnade considers the plan to be 'unsound' as the document consistently fails to meet the tests of soundness set out in the table following Paragraph 4.52 of PPS12 and respectfully requests that the Council notifies Icen, on behalf of Colonnade, of the future arrangements for the Examination of the Core Strategy. Furthermore, Colonnade wishes to take this opportunity to formally register a request to appear at all stages of the Examination in Public, including the pre-hearing meeting and any planned hearing sessions whereby issues raised in the context of this letter are to be discussed. Please confirm this request, and that the representations made to the Preferred Options Core Strategy will be taken into account alongside the current representations, by way of return to this letter.

Icen Projects, on behalf of Colonnade Land LLP trusts that the Council will find these representations to be constructive and helpful in taking forward the Core Strategy. Should you wish to discuss any aspect of these representations further, please do not hesitate to contact us.

Summary:

vi. Appendix H1

As set out in the representations to the Preferred Options Core Strategy, there is continuing concern that the list of improvements to infrastructure required in support of residential development as set out in Appendix H1 fails to provide the necessary justification for its inclusion. Whilst the preamble seeks to clarify why the infrastructure is sought, the inclusion of this list should be fully justified, otherwise it is of little value. Furthermore, it would be of benefit to provide further details of the existing community infrastructure provision and capacity within the evidence base.

The failure to provide the necessary justification for its inclusion means that the CSS will not be 'founded on a robust and credible evidence base' [test of soundness in the table following Paragraph 4.52 of PPS12].

Core Strategy Submission Document

O - 16287 - 12098 - Appendix H1 - i

16287 Object

CHAPTER 4 Appendix H1

Respondent: Mr David Dare [12098]

1, Woodstock Crescent
Hockley Essex
SS5 4XG
UK
01702 205813

Agent: N/A

Full Text: Highway & Traffic Implications

1. Proposals for moving employment to out of town locations, at either end of the district, with no existing public transport links, are contrary to government policy PPG4. It also contravenes the Core Strategy's stated aims of reducing carbon emissions; reliance on car transport and providing "an integrated network of cycle paths".

The District of Rochford is predominately spread on a West/East axis along the railway line. Hockley is located in the middle of the district and the two estates are adjacent to the railway station. Bus services are poor with just 3* an hour (following a recent 50% reduction in services) and the operator has admitted they cannot compete with the railway making improvements to new sites away from major centres unlikely. (* one of the 3 services is paid for by ECC on a 6 mth trial and may be terminated in the new year).

However, the Core Strategy proposes to relocate these two estates to a greenfield site near the airport. This site is 2-3 miles from the nearest railway station and there are currently no bus services to the area. As a result, RDC are proposing to upgrade the nearest road to a dual-carriageway, although the main connecting road (the B1013), which runs through Hockley, will remain single-carriageway and is already at 72% of capacity (ECC Highways stats). This is despite extra traffic expected in the area as a result of the Joint Area Action Plan (JAAP) which proposes considerable growth at neighbouring Southend Airport, as well as the new industrial estate.

The site selected for the new industrial estate also contravenes PPS4 which states;

* (EC7.3C) "out-of-centre sites, with preference given to sites which are or will be well served by a choice of means of transport and which are close to the centre and have a high likelihood of forming links with the centre. There is no existing public transport and no obvious likelihood of forming links with any existing centres.

* EC7.5 1 "whether the site is or will be accessible and well served by a choice of means of transport, especially public transport, walking and cycling, as well as by car". Its remote location. Accessed by the narrow, busy B1013 is not suitable for access by cycle or on foot.

It also contravenes PPS1 (27 vii) "Reduce the need to travel and encourage accessible public transport provision to secure more sustainable patterns of transport development. Planning should actively manage patterns of urban growth to make the fullest use of public transport and focus development in existing centres and near to major public transport interchanges".

The Core Strategy also contravenes its own policy T1 and is unsound.

Summary:

Proposals for moving employment to out of town locations, at either end of the district, with no existing public transport links, are contrary to government policy PPG4 & PPS1. It also contravenes the Core Strategy's stated aims of reducing carbon emissions; reliance on car transport and providing "an integrated network of cycle paths".

The Core Strategy also contravenes its own policy T1 and is unsound.

2. The Transport Evidence Base has not been re-evaluated following the decision to impose extra housing on the Eldon Way & Foundry Industrial Estates. ECC Highways have confirmed that the B1013 is running at 72% of its maximum theoretical capacity) and the effect of extra housing in Hockley (as well as Hawkwell) has not been re-evaluated and it is unclear what improvements will be required and whether they can be physically achieved.

Thus the proposals are not founded on a robust and credible evidence base and are unsound

3. RDC are proposing to scatter housing across the district in around 12 or sites but no detailed consideration has been given to the implications for highways across the District. The "Core Strategy" is not a strategy but simply a collection of disparate sites. Many roads across the District are at or near capacity but no modelling has been undertaken to determine the impacts or the funding required to upgrade them. At the Central Area Committee on 25 June 2009, RDC stated (in response to a question):

"Rochford Council is not the highway authority, but is working closely with Essex County Council to identify highway infrastructure requirements. Highway infrastructure improvements will be set out in the Core Strategy and other subsequent Development Plan Documents as required. These will be fed into the next version of the Essex Local

16287 Object

CHAPTER 4 Appendix H1

Transport Plan, which is effectively a bidding document for funds to implement highway infrastructure improvements, schemes to tackle congestion, etc.

The District Council is working closely with the Essex County Council to ensure that highway infrastructure identified in the Core Strategy can be delivered."

It is clear that (i) the combined impact of scattering houses across the District and (ii) relocating Eldon Way/Foundry Industrial Estates to the very edge of the District with no public transport services will exacerbate existing problems. It is also clear that the extent of improvements required is both unknown and not funded and the proposal is unsound.

Summary:

RDC are proposing to scatter housing across the district in around 12 or sites but no detailed consideration has been given to the implications for highways across the District. Many roads across the District are at or near capacity but no modelling has been undertaken to determine the impacts

It is clear that (i) the combined impact of scattering houses across the District and (ii) relocating Eldon Way/Foundry Industrial Estates with no public transport services will exacerbate existing problems. It is clear that the extent of improvements required is both unknown and not funded and the proposal is unsound.

4. PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs nor, especially, costs have been identified and the Core Strategy is therefore unsound.

The district's highways suffer from years of under investment and over use. The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. It is therefore unclear if use of Standard Charges is financially viable.

Policy T2 provides a list of required highway improvements. The list contains most of the more major roads in the District including Rectory Lane, which has a single track, traffic light controlled railway bridge. 1200 dwellings are proposed for the northern end of Rectory Road and a further 175 at the southern end. The cost of addressing the railway bridge bottleneck will be significant but is not mentioned.

No attempt is made to either cost these charges or explain how improvements not linked to any one specific development will be paid for (eg B1013; Ashingdon Road; a network of walking, cycling, bridleways).

The concept of paying for improvements through use of Standard Charges is totally unproven and unsound.

Summary:

PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs nor, especially, costs have been identified and the Core Strategy is therefore unsound.

The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. It is therefore unclear if use of Standard Charges is financially viable.

5. SERT is put forward as a solution to reducing car use but it will only skirt the edge of the district and the Core Strategy acknowledges there is only "potential" to do so in the future. SERT is not realistic or reliable a solution and the proposal is therefore unsound.

6. Previous consultations ignored by RDC:

* The Hockley Parish Plan (dated 2007), clearly states that residents are strongly against any large scale housing development in Hockley, but if there has to be additional housing, then there should be no loss of greenbelt or open spaces, and no large housing estate developments. It was also stated that any developments must be matched by the appropriate levels of infrastructure.

* The proposals also ignore the 95% rejection rate of respondents to RDC's own Hockley Area Plan (HAAP) Consultation (2009), which included specific proposals for Eldon Way (although HAAP did not even mention the adjoining Foundry Industrial Estate). Why have a consultation and ignore it?

Thus the proposals are not founded on a robust and credible evidence base and are unsound.

Summary:

Previous consultations ignored by RDC:

The proposals ignore the 95% rejection rate of respondents to RDC's own Hockley Area Plan (HAAP) Consultation (2009), which included specific proposals for Eldon Way (although HAAP did not even mention the adjoining Foundry Industrial Estate). Why have a consultation and ignore it?

16287 Object

CHAPTER 4 Appendix H1

Thus the proposals are not founded on a robust and credible evidence base and are unsound

7. RDC have not consulted on the very specific proposals to relocate the Eldon Way and Foundry Industrial Estates

* The previous CS Strategy stated "we will look at opportunities for more valuable and appropriate uses of the industrial land" with absolutely no consultation at all on concept of moving existing EW businesses entirely

* the Foundry Industrial Estate has never even been previously mentioned in any plan version; A recent amendment to the Core Strategy states this omission was due to a typing error!

* The Urban Capacity study stated a "low probability" of housing and did not even mention the Foundry Estate

Thus the proposals are they are not founded on a robust and credible evidence base and are unsound.

Summary:

RDC have not consulted on the very specific proposals to relocate the Eldon Way and Foundry Industrial Estates

The previous CS Strategy stated "we will look at opportunities for more valuable and appropriate uses of the industrial land" with absolutely no consultation at all on concept of moving existing EW businesses entirely

the Foundry Industrial Estate has never even been previously mentioned;

The Urban Capacity study stated a "low probability" of housing and did not even mention the Foundry Estate

Thus the proposals are they are not founded on a robust and credible evidence base and are unsound.

8. Eldon Way and Foundry Industrial Estates form a significant part of the ongoing Hockley Area Action Plan (HAAP) consultation but the Core Strategy proposals pre-empt the next stage of the HAAP consultation.

Neither the Core Strategy nor HAAP define its status relevant to the other plan and subsequent priorities. Why is there no cross-referencing between concurrent plans affecting the exact same piece of land?

There are also inconsistencies between the Core Strategy & HAAP regarding the description of proposed uses for the two industrial estates. The Core Strategy refers to Leisure, Commercial and Residential whilst HAAP mentions a "village green, introducing a significant area of public open space". There is not sufficient space for both and the Core Strategy is again pre-empting the ongoing HAAP.

If a decision is taken now, as part of the Core Strategy, to relocate all the existing businesses on the two estates, it will set a legal precedent which HAAP will need to follow and renders the next stage of HAAP virtually redundant. Particularly given the 95% rejection rate of respondents to the previous round of HAAP such an approach is entirely undemocratic and unsound.

Summary:

The Core Strategy proposals pre-empt the next stage of the HAAP consultation and neither defines its status relevant to the other plan and subsequent priorities.

There are also inconsistencies between the Core Strategy & HAAP.

If a decision is taken as part of the Core Strategy, to relocate all the existing businesses on the two estates, it will set a legal precedent which HAAP will need to follow and renders the next stage of HAAP virtually redundant. Particularly given the 95% rejection rate of respondents to the previous round of HAAP such an approach is entirely undemocratic and unsound.

9. PPS12, 4.6, states that Cores Strategies should be flexible and "should be able to show how they will handle contingencies". Several large planning applications have already been submitted to RDC proposing developments outside the Core Strategy which does not indicate how such applications will be handled and does not comply with PPS12. Neither have RDC been able to advise residents how such changes will be made and the strategy is unsound.

10. THE Core Strategy misrepresents the findings of The Retail & Leisure Study (R&LS) 2008.

The Core Strategy states (12.38) "The Retail & Leisure Study indicates Hockley has great potential. Hockley has been identified as having a need for additional convenience floorspace".

Whereas, the R&LS actually states:

1) (10.26) "the scale of need does not lend itself to a foodstore capable of retaining a significant proportion of main food

16287 Object

CHAPTER 4 Appendix H1

shopping expenditure.

2) (10.28) "There is no immediate capacity for additional floor space."

3) (10.29) "we recommend that focus be maintained on developing Hockley's

existing strengths, rather than retail expansion"

4) 10.31 "The current nature of Hockley does not lend itself to classification as a 'town centre' as defined by PPS6. Moveover, we have identified that it is a very small catchment population. Accordingly, the Council may wish to consider reclassifying Hockley from a town centre to a district centre".

The Core Strategy is inaccurate, misleading and unsound.

Summary:

The Core Strategy misrepresents the findings of The Retail & Leisure Study (R&LS) 2008. The Core Strategy states "The Retail & Leisure Study states Hockley has great potential and has a need for additional convenience floorspace". Whereas, the R&LS states: 1) "does not lend itself to a foodstore capable of retaining a significant proportion of main food shopping expenditure. 2) "There is no immediate capacity for additional floor space." 3) "we recommend that focus be maintained on developing Hockley's existing strengths." 4) " the Council may wish to consider reclassifying Hockley from a town centre to a district centre".

Summary:

PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs nor, especially, costs have been identified and the Core Strategy is therefore unsound.

The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. It is therefore unclear if use of Standard Charges is financially viable.

10 off Unsound Reasons.
1. Highway and Traffic Implications

Proposals for moving employment to out of town locations, at either end of the district, with no existing public transport links, are contrary to government policy PPG4 & PPS1. It also contravenes the Core Strategy's stated aims of reducing carbon emissions; reliance on car transport and providing "an integrated network of cycle paths".

The Core Strategy also contravenes its own policy T1 and is unsound.

2. The Transport Evidence Base has not been re-evaluated following the decision to impose extra housing on the Eldon Way & Foundry Industrial Estates. ECC Highways have confirmed that the B1013 is running at 72% of its maximum theoretical capacity) and the effect of extra housing in Hockley (as well as Hawkwell) has not been re-evaluated and it is unclear what improvements will be required and whether they can be physically achieved.

Thus the proposals are not founded on a robust and credible evidence base and are unsound

3. RDC are proposing to scatter housing across the district in around 12 or sites but no detailed consideration has been given to the implications for highways across the District. Many roads across the District are at or near capacity but no modelling has been undertaken to determine the impacts

It is clear that (i) the combined impact of scattering houses across the District and (ii) relocating Eldon Way/Foundry Industrial Estates with no public transport services will exacerbate existing problems. It is clear that the extent of improvements required is both unknown and not funded and the proposal is unsound.

4. PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs nor, especially, costs have been identified and the Core Strategy is therefore unsound.

The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. It is therefore unclear if use of Standard Charges is financially viable.

5. SERT is put forward as a solution to reducing car use but it will only skirt the edge of the district and the Core Strategy acknowledges there is only "potential" to do so in the future. SERT is not realistic or reliable a solution and the proposal is therefore unsound.

6. Previous consultations ignored by RDC:
The Hockley Parish Plan (dated 2007). The proposals ignore the 95% rejection rate of respondents to RDC's own Hockley Area Plan (HAAP) Consultation (2009), which included specific proposals for Eldon Way (although HAAP did not even mention the adjoining Foundry Industrial Estate). Why have a consultation and ignore it?

Thus the proposals are not founded on a robust and credible evidence base and are unsound

7. RDC not consulted on proposals to relocate the Eldon Way and Foundry Industrial Estates

EW; CS Strategy stated "we will look at opportunities for more valuable and appropriate uses of the industrial land" absolutely no consultation on concept of moving EW businesses entirely

FIE; has never even been previously mentioned in any plan version; CS states omission was due to typing error!

Urban Capacity study stated a "low probability" of housing and did not even mention the Foundry Estate

Thus proposals are not founded on a robust and credible evidence base and are unsound.

8. The Core Strategy proposals pre-empt the next stage of the HAAP consultation and neither defines its status relevant to the other plan and subsequent priorities.

Core Strategy Submission Document

CHAPTER 4 Appendix H1

There are also inconsistencies between the Core Strategy & HAAP.

If a decision is taken as part of the Core Strategy, to relocate all the existing businesses on the two estates, it will set a legal precedent which HAAP will need to follow and renders the next stage of HAAP virtually redundant. Particularly given the 95% rejection rate of respondents to the previous round of HAAP such an approach is entirely undemocratic and unsound

9. PPS12, 4.6, states that Cores Strategies should be flexible and "should be able to show how they will handle contingencies"

Several large planning applications have already been submitted to RDC proposing developments outside the Core Strategy which

does not indicate how such applications will be handled and does not comply with PPS12. Neither have RDC been able to advise

residents how such changes will be made and the strategy is unsound.

10. The CS misrepresents the findings of The Retail & Leisure Study (R&LS) 2008.

The CS states "The R&LS states Hockley has great potential and has a need for additional convenience floorspace".

Whereas, the R&LS actually states:

- 1) "does not lend itself to a food store capable of retaining a significant proportion of main food shopping expenditure.
- 2) "there is no immediate capacity for additional floor space."
- 3) "recommend that focus be maintained on developing Hockley's existing strengths."
- 4) " the Council may wish to consider reclassifying Hockley from a town center, to a district center".

Summary:

PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs nor, especially, costs have been identified and the Core Strategy is therefore unsound.

The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. It is therefore unclear if use of Standard Charges is financially viable.

Highway & Traffic Implications

Proposals for moving employment to out of town locations, at either end of the district, with no existing public transport links, are contrary to government policy PPG4. It also contravenes the Core Strategy's stated aims of reducing carbon emissions; reliance on car transport and providing "an integrated network of cycle paths".

The District of Rochford is predominately spread on a West/East axis along the railway line. Hockley is located in the middle of the district and the two estates are adjacent to the railway station. Bus services are poor with just 3* an hour (following a recent 50% reduction in services) and the operator has admitted they cannot compete with the railway making improvements to new sites away from major centres unlikely. (* one of the 3 services is paid for by ECC on a 6 mth trial and may be terminated in the new year).

However, the Core Strategy proposes to relocate these two estates to a greenfield site near the airport. This site is 2-3 miles from the nearest railway station and there are currently no bus services to the area. As a result, RDC are proposing to upgrade the nearest road to a dual-carriageway, although the main connecting road (the B1013), which runs through Hockley, will remain single-carriageway and is already at 72% of capacity (ECC Highways stats). This is despite extra traffic expected in the area as a result of the Joint Area Action Plan (JAAP) which proposes considerable growth at neighbouring Southend Airport, as well as the new industrial estate.

The site selected for the new industrial estate also contravenes PPS4 which states;
â€¢ (EC7.3C) "out-of-centre sites, with preference given to sites which are or will be well served by a choice of means of transport and which are close to the centre and have a high likelihood of forming links with the centre. There is no existing public transport and no obvious likelihood of forming links with any existing centres.
â€¢ EC7.5 1 "whether the site is or will be accessible and well served by a choice of means of transport, especially public transport, walking and cycling, as well as by car". Its remote location. Accessed by the narrow, busy B1013 is not suitable for access by cycle or on foot.

It also contravenes PPS1 (27 vii) "Reduce the need to travel and encourage accessible public transport provision to secure more sustainable patterns of transport development. Planning should actively manage patterns of urban growth to make the fullest use of public transport and focus development in existing centres and near to major public transport interchanges".

The Core Strategy also contravenes its own policy T1 and is unsound.

Summary:

Proposals for moving employment to out of town locations, at either end of the district, with no existing public transport links, are contrary to government policy PPG4 & PPS1. It also contravenes the Core Strategy's stated aims of reducing carbon emissions; reliance on car transport and providing "an integrated network of cycle paths".

The Core Strategy also contravenes its own policy T1 and is unsound.

The Transport Evidence Base has not been re-evaluated following the decision to impose extra housing on the Eldon Way & Foundry Industrial Estates. ECC Highways have confirmed that the B1013 is running at 72% of its maximum theoretical capacity) and the effect of extra housing in Hockley (as well as Hawkwell) has not been re-evaluated and it is unclear what improvements will be required and whether they can be physically achieved.

Thus the proposals are not founded on a robust and credible evidence base and are unsound
RDC are proposing to scatter housing across the district in around 12 or sites but no detailed consideration has been given to the implications for highways across the District. The "Core Strategy" is not a strategy but simply a collection of disparate sites. Many roads across the District are at or near capacity but no modelling has been undertaken to determine the impacts or the funding required to upgrade them. At the Central Area Committee on 25 June 2009, RDC stated (in response to a question):

"Rochford Council is not the highway authority, but is working closely with Essex County Council to identify highway infrastructure requirements. Highway infrastructure improvements will be set out in the Core Strategy and other subsequent Development Plan Documents as required. These will be fed into the next version of the Essex Local Transport Plan, which is effectively a bidding document for funds to implement highway infrastructure improvements, schemes to tackle congestion, etc.

The District Council is working closely with the Essex County Council to ensure that highway infrastructure identified in the Core Strategy can be delivered."

It is clear that (i) the combined impact of scattering houses across the District and (ii) relocating Eldon Way/Foundry Industrial Estates to the very edge of the District with no public transport services will exacerbate existing problems. It is

16443 Object

CHAPTER 4 Appendix H1

also clear that the extent of improvements required is both unknown and not funded and the proposal is unsound.

Summary:

RDC are proposing to scatter housing across the district in around 12 or sites but no detailed consideration has been given to the implications for highways across the District. Many roads across the District are at or near capacity but no modelling has been undertaken to determine the impacts

It is clear that (i) the combined impact of scattering houses across the District and (ii) relocating Eldon Way/Foundry Industrial Estates with no public transport services will exacerbate existing problems. It is clear that the extent of improvements required is both unknown and not funded and the proposal is unsound.

PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs nor, especially, costs have been identified and the Core Strategy is therefore unsound.

The district's highways suffer from years of under investment and over use. The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. It is therefore unclear if use of Standard Charges is financially viable.

Policy T2 provides a list of required highway improvements. The list contains most of the more major roads in the District including Rectory Lane, which has a single track, traffic light controlled railway bridge. 1200 dwellings are proposed for the northern end of Rectory Road and a further 175 at the southern end. The cost of addressing the railway bridge bottleneck will be significant but is not mentioned.

No attempt is made to either cost these charges or explain how improvements not linked to any one specific development will be paid for (eg B1013; Ashingdon Road; a network of walking, cycling, bridleways).

The concept of paying for improvements through use of Standard Charges is totally unproven and unsound.

Summary:

PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs nor, especially, costs have been identified and the Core Strategy is therefore unsound.

The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. It is therefore unclear if use of Standard Charges is financially viable.

SERT is put forward as a solution to reducing car use but it will only skirt the edge of the district and the Core Strategy acknowledges there is only "potential" to do so in the future. SERT is not realistic or reliable a solution and the proposal is therefore unsound.

Previous consultations ignored by RDC:

â€¢ The Hockley Parish Plan (dated 2007), clearly states that residents are strongly against any large scale housing development in Hockley, but if there has to be additional housing, then there should be no loss of greenbelt or open spaces, and no large housing estate developments. It was also stated that any developments must be matched by the appropriate levels of infrastructure.

â€¢ The proposals also ignore the 95% rejection rate of respondents to RDC's own Hockley Area Plan (HAAP) Consultation (2009), which included specific proposals for Eldon Way (although HAAP did not even mention the adjoining Foundry Industrial Estate). Why have a consultation and ignore it?

Thus the proposals are not founded on a robust and credible evidence base and are unsound.

Summary:

CHAPTER 4 Appendix H1

Respondent: Rawreth Parish Council (Mrs H Bloomfield) [7342] **Agent:** N/A

Rawreth Parish Council
103 Downhall Park
Way Rayleigh
Essex
SS6 9QZ
01268 631821

Full Text:

LDF - Preferred Options - Rayleigh conurbation.

On behalf of Rawreth Parish Council I confirm that this letter is a formal response of objection to the final draft of Rochford District Councils Core Strategy Preferred Options document.

Firstly, at no time has the Parish of Rawreth been included or mentioned in any "Tier" on page 33 of the document, the criteria for allocation of houses - within the Core Strategy. If it had been included it should have been in Tier 4 and this is, therefore, UNSOUND.

The Parish Council believes that to develop 550 houses in one place within area no: 144, land to the north of London Road and then to add a further 220 to the Rawreth Industrial Estate area will totally destroy the character and rural outlook of Rawreth and surrounding areas. It will destroy the residents' "strong sense of identity within their own settlement" and is, therefore, UNSOUND.

The huge development of 550 houses is totally unacceptable. The land north of London Road is good quality agricultural land which is protected by the Green Belt -GB1 - fulfils all purposes under PPG2 and should be retained as such. Once used for development this land can never be returned to agricultural use, and if you continue to erode into our Green Belt and farmland it will be lost forever.

The Parish Council believe a proportion of the houses required to be built in our area should compliment and enhance Rawreth, cause as little extra congestion to our already heavily overcrowded roads as possible and provide a pleasant environment for those people wishing to move to the area. This particular area is part of the "Gateway to Rochford" and is the "strategic buffer" between Rayleigh and Wickford. Reference is made in the Core Strategy document to "avoiding coalescence" of villages/towns, however a development of this size immediately erodes the buffer between Rayleigh, Rawreth and Wickford, starts coalescence, destroys the rural character of Rawreth and, therefore, is UNSOUND.

The Core Strategy Document details Rochford District Councils priorities and objectives and details how the role of the Core Strategy features in achieving these. In support of the Parish Councils observations and alternative proposals they comment as follows.

Page 5 "Fostering greater community cohesion"

Development of land between Rawreth Lane and north of London Road will not give any community cohesion at all, it will simply be an extension to the west of Rayleigh giving residents no real sense of belonging, they will live within the Parish of Rawreth, yet they will be considered as living in Rayleigh as has been proved with other developments along Rawreth Lane such as Laburnum Way.

Page 12 "Priority 5 Essex roads are safer less congested and everyone has access to essential services"

The roads and infrastructure in the Rawreth area are completely full to capacity. The A127, A1245, A129 London Road, Rawreth Lane and Watery Lane just cannot take any more traffic and the proposed development on land to the north of London Road will increase traffic to a completely unsustainable level. On numerous occasions this year incidents within and on the outskirts of the Parish have brought traffic to a standstill for hours along London Road, Rawreth Lane, Watery Lane/Beeches Road and the Hullbridge Road. It took some residents 1 1/4 hours to proceed along Rawreth Lane and into Hullbridge - a distance of 1 1/2 miles.

The proposed development at the western edge of Hullbridge, which is, in fact, largely in Rawreth would also greatly increase the traffic problems in the area. Rawreth Parish Council understand there would be a proposal to "widen/straighten" Watery Lane/Beeches Road, with a roundabout at the junction with the Hullbridge Road. This is an extremely dangerous junction even at the present time and would become increasingly so. There is also the question of where the traffic would go when it reaches Battlesbridge at the Western end, it cannot possibly cross the Bridge as this is "restricted" and in a Conservation Area, therefore, it would have to turn left and proceed to the A1245 - a very dangerous junction.

Beeches Road/Watery Lane is also shown in the document as a new cyclist route. Surely this is a conflict of interest, a road widening/straightening proposal coupled with a cycle route.

Page 33 "Tier Settlements"

Nowhere in the Core Strategy Document is Rawreth Parish actually mentioned, it features in the "all other settlements tier 4" and is referred to as "land north of London Road Rayleigh" or "West Rayleigh" yet, the housing allocation of 550 dwellings between 2015 and 2021 and the 220 planned for the Rawreth Industrial Estate is the largest that any area is taking. Rawreth Parish currently has 380 dwellings and an electorate of 812, yet the proposed housing figures are set to increase the overall number of dwellings in the Parish by 203%.

Pages 34 to 36 "The efficient use of land for housing" and "Extensions to residential envelopes and phasing"

The Core Strategy Document states that "the Council recognises the importance of making best use of brownfield land" and "whilst the Council acknowledge that the housing requirement stipulated in the East of England Plan is a minimum, it must also be mindful of the need to maintain Green Belt as far as possible" yet the proposed 550 houses on the land

16473 Object

CHAPTER 4 Appendix H1

north of London Road will all be built on Green Belt land of high agricultural value. The document states that "the Council will direct development to the most sustainable locations on the edge of settlements having regard to:"

"The potential to avoid areas of constraint (such as areas at risk of flooding, sites of ecological importance"

"The historical, agricultural and ecological value of land"

"The potential to create a defensible Green Belt Boundary and

"The avoidance of coalescence with neighbouring settlements"

Yet these key factors all seem to have been ignored when choosing the site to the north of London Road and, therefore, the proposal is UNSOUND. The Parish of Rawreth has a history of flooding, the land in Rawreth Lane will drain into the already overloaded brook system and the Services in the area would be unable to cope with this increase in housing - drains and sewers are already working to capacity. Heavy rain earlier in the year resulted in flooding in Watery Lane and the Rawreth Brook system has been very close to flooding twice already this year. During a meeting between the Parish Council and the Environment Agency we were advised that this situation will worsen with increased housing.

Page 42 "Gypsy and Traveller Accommodation"

This section details the need for an allocation of 15 pitches by 2011, it also states that they "will examine the potential of current unauthorised sites to meet this need" and that "sites will be allocated in the west of the District" The west of the District is in fact Rawreth, but yet again the Parish name has not been detailed. The Parish already has an unauthorised site which is the subject of an enforcement case and although well kept is on the brow of a hill on a main highway with restricted access which Essex County Council have already raised concerns about, this is not a site that should be considered as part of the requirement due to its location, but also, why is the allocation of all 15 pitches being detailed to one area?

Page 43 to 44 "Appendix 1"

Details of all the infrastructure to accompany residential development is listed, yet there are no detailed costs, have these been done? And are these achievable? Large numbers of housing in one area, as stated in the infrastructure requirements, will necessitate a new primary school. County figures suggest that there will be surplus places in Rayleigh schools even with new housing. Obviously these will be in the wrong parts of the town so increasing the risk that an existing school could close. It makes sense to spread the development in smaller sites around the town, avoiding closure and preventing unnecessary provision of a new school.

Page 57 "Strategies, Activities and Actions - The Green Belt"

The document states that "The Council will continue to support the principals of restricting development in the Green Belt, as set out in PPG2 and will preserve the character and openness of the Green Belt" it further states that "a small proportion of the District's Green Belt will have to have its designation reviewed to allow development" The entire development of 550 houses planned for land north of London Road is all on Green Belt land as is the land at Hullbridge, how does this equate to a "small proportion"?

The Councils own Policy GB1- Green Belt Protection states "The Council will allocate the minimum amount of Green Belt land necessary to meet the District's housing and employment needs" and that they will "direct development away from the Green Belt as far as is practicable and will prioritise the protection of the Green Belt land based on how well the land helps achieve the purposes of the Green Belt".

This area of land confirms all 5 purposes of the national PPG2 - Green Belt:-

It prevents the unrestricted sprawl of western Rayleigh

It provides a barrier to prevent the ultimate merging of Rayleigh, Rawreth and Wickford

It assists in safeguarding the countryside from encroachment

It preserves the setting and special character of historic towns

Assists in urban regeneration, by encouraging the recycling of derelict and other urban land

Rawreth Parish Council have observed that there are a number of sites that were put forward in the "Call for Sites" that are pre-used brownfield land in the Green Belt land, and as such would prove beneficial and in their opinion should have been considered for development. Their non-inclusion as "brownfield" sites makes the current proposals

UNSOUND:

Site No; 73 Hambro Nursery a site of approximately 3.93 hectares, coupled with the adjacent site Clovelly, would provide between 200 and 250 houses in an area of approximately 4.85 hectares this area would have good access directly from the A1245 and if expanded north westward to include land up to and around the Village Hall, approximately another 2.08 hectares could produce between 50 and 80 further houses. This area could be accessed either from the slip road (Chelmsford Road) to the south of the Nevendon Garage or from Church Road.

Both of these sites would remove the need for extra traffic along the A129 and Rawreth Lane which are both already operating well over maximum capacity. This development would require a footbridge for pedestrians, cyclists and horses over the A1245.

Rawreth Parish Council believe these proposals would be sensible infill of these areas and would be on "Brownfield" sites where current businesses are not particularly progressive and would not result in the loss of many jobs. Our figures are quite conservative and we believe that if these sites were chosen a much reduced number of houses would need to be built "North of London Road" on Green Belt land.

Phase 2 - With regard to the houses that are proposed for the Northeast corner of Rawreth/Hullbridge, the Parish Council are concerned that any development would cause considerable extra congestion to the immediate roads. We understand that the thoughts are to "straighten" and improve parts of Watery Lane and Beeches Road to provide access to and through Battlesbridge - a conservation area. Recent experience of deep flooding in Watery Lane with the road closed for several days on 3 occasions in the early part of 2009 proves that this proposal is completely unsustainable. The local drainage systems simply cannot take the amount of run-off experienced now and with further development this

Core Strategy Submission Document

16473 Object

CHAPTER 4 Appendix H1

would increase the problem.

If this development is to go ahead, the Parish Council believe that a relief road should be built, from the end of Watery Lane, skirting to the west of the Rayleigh Park Estate, crossing Rawreth Lane at a mini-roundabout and entering a vastly improved A129 at approximately Lower Barn Farm. This would take any necessary traffic in and out of the area efficiently.

The Parish Council further believe that the Michelins Farm site No: 49 would be an ideal site for the Rawreth Industrial Estate. This would adjoin proposed industrial sites within the Basildon District and would provide excellent road and transport links. Rawreth Parish Council also proposed that the land opposite Michelins Farm could be used to re-site the illegal Gypsy/Traveller site that is currently situated on the busy A1245. The land opposite Michelins Farm would not only be a much safer site for Gypsy/Traveller pitches, but the correct use of the land would also ensure the environmental improvement of the site as a whole.

All of the above proposals were submitted to Rochford District Council, but they were not taken into consideration in the final draft resulting in the predominant use of Green Belt land for development, bounded by already congested roads and, therefore, the proposals are UNSOUND.

Summary: Page 43 to 44 "Appendix 1"

Details of all the infrastructure to accompany residential development is listed, yet there are no detailed costs, have these been done? And are these achievable? Large numbers of housing in one area, as stated in the infrastructure requirements, will necessitate a new primary school. County figures suggest that there will be surplus places in Rayleigh schools even with new housing. Obviously these will be in the wrong parts of the town so increasing the risk that an existing school could close. It makes sense to spread the development in smaller sites around the town, avoiding closure and preventing unnecessary provision of a new school.

Full Text:

The separate representations made by the Aston Unit Trust and Mr J Needs on Policies H1, H2 and H3 set out the case why the Core Strategy fails to provide a sound settlement strategy and distributes greenfield housing in a manner which will not deliver a more sustainable pattern of development and will not deliver the Core Strategy objectives. The remedy is to allocate less greenfield development to the villages such as Hullbridge, and more to Rayleigh which is the largest settlement in the District with the greatest range of facilities and services. The representations suggest combining Policies H2 and H3 and allocating further sites at Rayleigh including 200 dwellings to the east of the town. In order to be consistent, it is necessary to add 'East of Rayleigh' to Appendix H1 setting out new infrastructure and services which would be required to accompany the site.

Add to Appendix H1

"East of Rayleigh and South of the B1013

- enhancements to the B1013 (Policy T2)
- local highway capacity and infrastructure improvements
- public transport infrastructure improvements and service enhancements
- improved pedestrian / cycle links to Rayleigh Town Centre
- improved pedestrian / cycle links to the Upper Roach Valley
- sustainable drainage systems
- public open space
- play space."

It is considered that our participation at the oral part of the public examination would assist the Inspector for two main reasons

- Sellwood Planning has a detailed knowledge of the Rochford area, appeared at the last Local Plan Inquiry and was a participant at the RSS public examination. This direct knowledge of the local area and the statutory Development Plan may be of assistance to the Inspector

- Sellwood Planning has experience in promoting major schemes through Core Strategies (eg. 7,000 dwellings in Ashford, 5,750 dwellings in Dover, 2,500 dwellings in Horsham and 1,200 dwellings in Newmarket) and the emerging body of evidence of what constitutes a sound Core Strategy and what is unsound. Our experience indicates that, in a number of respects, the submitted Core Strategy is unsound in its present form.

Summary:

The separate representations made by the Aston Unit Trust and Mr J Needs on Policies H1, H2 and H3 set out the case why the Core Strategy fails to provide a sound settlement strategy and distributes greenfield housing in a manner which will not deliver a more sustainable pattern of development and will not deliver the Core Strategy objectives. The remedy is to allocate less greenfield development to the villages such as Hullbridge, and more to Rayleigh which is the largest settlement in the District with the greatest range of facilities and services. The representations suggest combining Policies H2 and H3 and allocating further sites at Rayleigh including 200 dwellings to the east of the town. In order to be consistent, it is necessary to add 'East of Rayleigh' to Appendix H1 setting out new infrastructure and services which would be required to accompany the site.

Objections to RDC's Core Strategy Submission DPD

Reason Unsound

1. Highway & Traffic Implications

Proposals for moving employment to out of town locations, at either end of the district, with no existing public transport links, are contrary to government policy PPG4. It also contravenes the Core Strategy's stated aims of reducing carbon emissions; reliance on car transport and providing "an integrated network of cycle paths".

The District of Rochford is predominately spread on a West/East axis along the railway line. Hockley is located in the middle of the district and the two estates are adjacent to the railway station. Bus service are poor with just 3* an hour (following a recent 50% reduction in services) and the operator has admitted they cannot compete with the railway making improvements to new sites away from major centres unlikely. (* one of the 3 services is paid for by ECC on a 6 mth trial and may be terminated in the new year).

However, the Core Strategy proposes to relocate these two estates to a greenfield site near the airport. This site is 2-3 miles from the nearest railway station and there are currently no bus services to the area. As a result, RDC are proposing to upgrade the nearest road to a dual-carriageway, although the main connecting road (the B1013), which runs through Hockley, will remain single-carriageway and is already at 72% of capacity (ECC Highways stats). This is despite extra traffic expected in the area as a result of the Joint Area Action Plan (JAAP) which proposes considerable growth at neighbouring Southend Airport, as well as the new industrial estate.

The site selected for the new industrial estate also contravenes PPS4 which states:

(EC7.3C) "out-of-centre site, with preference given to sites which are or will be well served by a choice of means of transport and which are close to the centre and have a high likelihood of forming links with the centre. There is no existing public transport and no obvious likelihood of forming links with any existing centres.

EC7.5 1 "whether the site is or will be accessible and well served by a choice of means of transport, especially public transport, walking and cycling, as well as by car". Its remote location. Accessed by the narrow, busy B1013 is not suitable for access by cycle or on foot.

It also contravenes PPS1 (27 vii) "Reduce the need to travel and encourage accessible public transport provision to secure more sustainable patterns of transport development. Planning should actively manage patterns of urban growth to make the fullest use of public transport and focus development in existing centres and near to major public transport interchanges".

The Core Strategy also contravenes its own policy T1 and is unsound.

2. The Transport Evidence Base has not been re-evaluated following the decision to impose extra housing on the Eldon Way & Foundry Industrial Estates. ECC Highways have confirmed that the B1013 is running at 72% of its maximum theoretical capacity) and the effect of extra housing in Hockley (as well as Hawkwell) has not been re-evaluated and it is unclear what improvements will be required and whether they can be physically achieved.

3. RCD are proposing to scatter housing across the district in around 12 or sites but no detailed consideration has been given to the implications for highways across the District. The "Core Strategy" is not a strategy but simply a collection of disparate sites. Many roads across the District are at or near capacity but no modelling has been undertaken to determine the impacts or the funding required to upgrade them. At the Central Area Committee on 25 June 2009, RDC stated (in response to a question):

"Rochford Council is not the highway authority, but is working closely with Essex County Council to identify highway infrastructure requirements. Highway infrastructure improvements will be set out in the Core Strategy and other subsequent Development Plan Documents as required. These will be fed into the next version of the Essex Local Transport Plan, which is effectively a bidding document for funds to implement highway infrastructure improvements, schemes to tackle congestion, etc.

The District Council is working closely with the Essex County Council to ensure that highway infrastructure identified in the Core Strategy can be delivered."

16488 Object

CHAPTER 4 Appendix H1

It is clear that (i) the combined impact of scattering houses across the District and (ii) relocating Eldon Way/Foundry Industrial Estates to the very edge of the District with no public transport services will exacerbate existing problems. It is also clear that the extent of improvements required is both unknown and not funded and the proposal is unsound.

4. PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs not, especially, costs have been identified and the Core Strategy is therefore unsound.

The district's highways suffer from years of under investment and over use. The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. Thus it is unclear if use of Standard Charges is financially viable.

Policy T2 provides a list of required highway improvements. The list contains most of the more major roads in the District including Rectory Lane, which has a single track, traffic light controlled railway bridge. 1200 dwellings are proposed for the northern end of Rectory Road and a further 175 at the southern end. The cost of address the railway bridge bottleneck will be significant but is not mentioned.

No attempt is made to either cost these charges or explain how improvements not linked to any one specific development will be paid for (eg B1013; Ashingdon Road; a network of walking, cycling, bridleways).

The concept of paying for improvements through use of Standard Charges is totally unproven and unsound.

5. SERT is put forward as a solution to reducing car use but it will only skirt the edge of the district and the Core Strategy acknowledges there is only "potential" to do so in the future. SERT is not realistic or reliable a solution and the proposal is therefore unsound.

6. Previous consultations ignored by RDC:

The Hockley Parish Plan (dated 2007), clearly states that residents are strongly against any large scale housing development in Hockley, but if there has to be additional housing, then there should be no loss of greenbelt or open spaces, and no large housing estate developments. It was also stated that any developments must be matched by the appropriate levels of infrastructure.

The proposals also ignore the 95% rejection rate of respondents to RDC's own Hockley Area Plan (HAAP) Consultation (2009), which included specific proposals for Eldon Way (although HAAP did not even mention the adjoining Foundry Industrial Estate). Why have a consultation and ignore it?

7. RDC have not consulted on the very specific proposals to relocate the Eldon Way and Foundry Industrial Estates

The previous CS Strategy stated "we will look at opportunities for more valuable and appropriate uses of the industrial land" with absolutely no consultation at all on concept of moving existing EW businesses entirely

The Foundry Industrial Estates has never even been previously mentioned in any plan version; A recent amendment to the Core Strategy acknowledges this omission was due to a typing error!

The Urban Capacity study stated a "low probability" of housing and did not even mention the Foundry Estate

Thus the proposals are they are not founded on a robust and credible evidence base and are unsound.

8. Eldon Way and Foundry Industrial Estates form a significant part of the ongoing HAAP consultation but the Core Strategy proposals pre-empt the next stage of the HAAP consultation.

Neither the Core Strategy or Hockley Area Action Plan (HAAP) defines its status relevant to the other plan and subsequent priorities. Why is there no cross-referencing between concurrent plans affecting the exact same piece of land?

There are also inconsistencies between the Core Strategy & HAAP regarding the description of proposed uses for the two industrial estates. The Core Strategy refers to Leisure, Commercial and Residential whilst HAAP mentions a "village green, introducing a significant area of public open space". There is not sufficient space for both and the Core Strategy is again pre-empting the ongoing HAAP.

If a decision is taken now, as part of the Core Strategy, to relocate all the existing businesses on the two estates, it will set a legal precedent which HAAP will need to follow and renders the next stage of HAAP virtually redundant. Particularly given the 95% rejection rate of respondents to the previous round of HAAP such an approach is entirely undemocratic and unsound.

9. PPS12, 4.6, states that Cores Strategies show be flexible and "should be able to show how they will handle contingencies". Several large planning applications have already been submitted to RDC proposing developments outside the Core Strategy which do not indicate how such applications will be handled and does not comply with

Core Strategy Submission Document

16488 Object

CHAPTER 4 Appendix H1

PPS12. Neither have RDC been able to advise residents how such changes will be made and the strategy is unsound.

10. The Core Strategy misrepresents the findings of The Retail & Leisure Study (R&LS) 2008.

The Core Strategy states (12.38) "The Retail & Leisure Study indicates Hockley has great potential. Hockley has been identified as having a need for additional convenience floorspace".

Whereas, the R&LS actually states:

1) (10.26) "the scale of need does not lend itself to a foodstore capable of retaining a significant proportion of main food shopping expenditure.

2) (10.28) "There is no immediate capacity for additional floor space."

3) (10.29) "we recommend that focus be maintained on developing Hockley's existing strengths, rather than retail expansion".

4) 10.31 "The current nature of Hockley does not lend itself to classification as a 'town centre' as defined by PPS6. Moreover, we have identified that it is a very small catchment population. Accordingly, the Council may wish to consider reclassifying Hockley from a town centre to a district centre".

The Core Strategy is inaccurate, misleading and unsound.

Summary:

4. PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs nor, especially, costs have been identified and the Core Strategy is therefore unsound.

The district's highways suffer from years of under investment and over use. The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. 1. Highway & Traffic Implications

Proposals for moving employment to out of town locations, at either end of the district, with no existing public transport links, are contrary to government policy PPG4. It also contravenes the Core Strategy's stated aims of reducing carbon emissions; reliance on car transport and providing "an integrated network of cycle paths".

The District of Rochford is predominately spread on a West/East axis along the railway line. Hockley is located in the middle of the district and the two estates are adjacent to the railway station. Bus service are poor with just 3* an hour (following a recent 50% reduction in services) and the operator has admitted they cannot compete with the railway making improvements to new sites away from major centres unlikely. (* one of the 3 services is paid for by ECC on a 6 mth trial and may be terminated in the new year).

However, the Core Strategy proposes to relocate these two estates to a greenfield site near the airport. This site is 2-3 miles from the nearest railway station and there are currently no bus services to the area. As a result, RDC are proposing to upgrade the nearest road to a dual-carriageway, although the main connecting road (the B1013), which runs through Hockley, will remain single-carriageway and is already at 72% of capacity (ECC Highways stats). This is despite extra traffic expected in the area as a result of the Joint Area Action Plan (JAAP) which proposes considerable growth at neighbouring Southend Airport, as well as the new industrial estate.

The site selected for the new industrial estate also contravenes PPS4 which states:

(EC7.3C) "out-of-centre site, with preference given to sites which are or will be well served by a choice of means of transport and which are close to the centre and have a high likelihood of forming links with the centre. There is no existing public transport and no obvious likelihood of forming links with any existing centres.

EC7.5 1 "whether the site is or will be accessible and well served by a choice of means of transport, especially public transport, walking and cycling, as well as by car". Its remote location. Accessed by the narrow, busy B1013 is not suitable for access by cycle or on foot.

It also contravenes PPS1 (27 vii) "Reduce the need to travel and encourage accessible public transport provision to secure more sustainable patterns of transport development. Planning should actively manage patterns of urban growth to make the fullest use of public transport and focus development in existing centres and near to major public transport interchanges".

The Core Strategy also contravenes its own policy T1 and is unsound.

2. The Transport Evidence Base has not been re-evaluated following the decision to impose extra housing on the Eldon Way & Foundry Industrial Estates. ECC Highways have confirmed that the B1013 is running at 72% of its maximum theoretical capacity) and the effect of extra housing in Hockley (as well as Hawkwell) has not been re-evaluated and it is unclear what improvements will be required and whether they can be physically achieved.

Thus the proposals are not founded on a robust and credible evidence base and are unsound.

3. RCD are proposing to scatter housing across the district in around 12 or sites but no detailed consideration has been given to the implications for highways across the District. The "Core Strategy" is not a strategy but simply a collection of disparate sites. Many roads across the District are at or near capacity but no modelling has been undertaken to determine the impacts or the funding required to upgrade them. At the Central Area Committee on 25 June 2009, RDC stated (in response to a question):

"Rochford Council is not the highway authority, but is working closely with Essex County Council to identify highway infrastructure requirements. Highway infrastructure improvements will be set out in the Core Strategy and other subsequent Development Plan Documents as required. These will be fed into the next version of the Essex Local Transport Plan, which is effectively a bidding document for funds to implement highway infrastructure improvements, schemes to tackle congestion, etc.

The District Council is working closely with the Essex County Council to ensure that highway infrastructure identified in the Core Strategy can be delivered."

It is clear that (i) the combined impact of scattering houses across the District and (ii) relocating Eldon Way/Foundry Industrial Estates to the very edge of the District with no public transport services will exacerbate existing problems. It is also clear that the extent of improvements required is both unknown and not funded and the proposal is unsound.

16530 Object

CHAPTER 4 Appendix H1

Summary:

RDC are proposing to scatter housing across the district in around 12 or sites but no detailed consideration has been given to the implications for highways across the District. Many roads across the District are at or near capacity but no modelling has been undertaken to determine the impacts.

It is clear that (i) the combined impact of scattering houses across the District and (ii) relocating Eldon Way/Foundry Industrial Estates with no public transport services will exacerbate existing problems. It is clear that the extent of improvements required is both unknown and not funded and the proposal is unsound.

4. PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs nor, especially, costs have been identified and the Core Strategy is therefore unsound.

The district's highways suffer from years of under investment and over use. The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. Thus it is unclear if use of Standard Charges is financially viable.

The Urban Capacity study stated a "low probability" of housing and did not even mention the Foundry Estate

Thus the proposals are they are not founded on a robust and credible evidence base and are unsound.

Summary:

RDC have not consulted on the very specific proposals to relocate the Eldon Way and Foundry Industrial Estates.

The previous CS Strategy stated "we will look at opportunities for more valuable and appropriate uses of the industrial land" with absolutely no consultation at all on concept of moving existing FW businesses entirely.

The Foundry Industrial Estate has never even been previously mentioned.

The Urban Capacity study stated a "low probability" of housing and did not even mention the Foundry Estate.

Thus the proposals are they are not founded on a robust and credible evidence base and are unsound.

8. Eldon Way and Foundry Industrial Estates form a significant part of the ongoing HAAP consultation but the Core Strategy proposals pre-empt the next stage of the HAAP consultation.

Neither the Core Strategy or Hockley Area Action Plan (HAAP) defines its status relevant to the other plan and subsequent priorities. Why is there no cross-referencing between concurrent plans affecting the exact same piece of land?

There are also inconsistencies between the Core Strategy & HAAP regarding the description of proposed uses for the two industrial estates. The Core Strategy refers to Leisure, Commercial and Residential whilst HAAP mentions a "village green, introducing a significant area of public open space". There is not sufficient space for both and the Core Strategy is again pre-empting the ongoing HAAP.

If a decision is taken now, as part of the Core Strategy, to relocate all the existing businesses on the two estates, it will set a legal precedent which HAAP will need to follow and renders the next stage of HAAP virtually redundant. Particularly given the 95% rejection rate of respondents to the previous round of HAAP such an approach is entirely undemocratic and unsound.

Summary

The Core Strategy proposals pre-empt the next stage of the HAAP consultation and neither defines its status relevant to the other plan and subsequent priorities.

There are also inconsistencies between the Core Strategy & HAAP.

If a decision is taken as part of the Core Strategy, to relocate all the existing businesses on the two estates, it will set a legal precedent which HAAP will need to follow and renders the next stage of HAAP virtually redundant. Particularly given the 95% rejection rate of respondents to the previous round of HAAP such an approach is entirely undemocratic and unsound.

9. PPS12, 4.6, states that Cores Strategies show be flexible and "should be able to show how they will handle contingencies". Several large planning applications have already been submitted to RDC proposing developments outside the Core Strategy which do not indicate how such applications will be handled and does not comply with PPS12. Neither have RDC been able to advise residents how such changes will be made and the strategy is unsound.

10. The Core Strategy misrepresent the findings of The Retail & Leisure Study (R&LS) 2008.

The Core Strategy states (12.38) "The Retail & Leisure Study indicates Hockley has great potential. Hockley has been identified as having a need for additional convenience floorspace".

Whereas, the R&LS actually states:

1) (10.26) "the scale of need does not lend itself to a foodstore capable of retaining a significant proportion of main food shopping expenditure.

2) (10.28) "There is no immediate capacity for additional floor space."

3) (10.29) "we recommend that focus be maintained on developing Hockley's existing strengths, rather than retail expansion".

4) 10.31 "The current nature of Hockley does not lend itself to classification as a 'town centre' as defined by PPS6.

Core Strategy Submission Document

16530 Object

CHAPTER 4 Appendix H1

Moreover, we have identified that it is a very small catchment population. Accordingly, the Council may wish to consider reclassifying Hockley from a town centre to a district centre".

The Core Strategy is inaccurate, misleading and unsound.

Summary:

The Core Strategy misrepresents the findings of The Retail & Leisure Study (R&LS) 2008. The Core Strategy states "The Retail & Leisure Study states Hockley has great potential and has a need for additional convenience floorspace". Whereas, the R&LS states: 1) "does not lend itself to a foodstore capable of retaining a significant proportion of main food shopping expenditure. 2) "There is no immediate capacity for additional space." 3) "we recommend that focus be maintained on developing Hockley's existing strengths." 4) "the Council may wish to consider reclassifying Hockley from a town centre to a district centre.

Summary: PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs nor, especially, costs have been identified and the Core Strategy is therefore unsound.

The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. It is therefore unclear if use of Standard Charges is financially viable.

1. Highway & Traffic Implications

Proposals for moving employment to out of town locations, at either end of the district, with no existing public transport links, are contrary to government policy PPG4. It also contravenes the Core Strategy's stated aims of reducing carbon emissions; reliance on car transport and providing "an integrated network of cycle paths".

The District of Rochford is predominately spread on a West/East axis along the railway line. Hockley is located in the middle of the district and the two estates are adjacent to the railway station. Bus service are poor with just 3* an hour (following a recent 50% reduction in services) and the operator has admitted they cannot compete with the railway making improvements to new sites away from major centres unlikely. (* one of the 3 services is paid for by ECC on a 6 mth trial and may be terminated in the new year).

However, the Core Strategy proposes to relocate these two estates to a greenfield site near the airport. This site is 2-3 miles from the nearest railway station and there are currently no bus services to the area. As a result, RDC are proposing to upgrade the nearest road to a dual-carriageway, although the main connecting road (the B1013), which runs through Hockley, will remain single-carriageway and is already at 72% of capacity (ECC Highways stats). This is despite extra traffic expected in the area as a result of the Joint Area Action Plan (JAAP) which proposes considerable growth at neighbouring Southend Airport, as well as the new industrial estate.

The site selected for the new industrial estate also contravenes PPS4 which states:

(EC7.3C) "out-of-centre site, with preference given to sites which are or will be well served by a choice of means of transport and which are close to the centre and have a high likelihood of forming links with the centre. There is no existing public transport and no obvious likelihood of forming links with any existing centres.

EC7.5 1 "whether the site is or will be accessible and well served by a choice of means of transport, especially public transport, walking and cycling, as well as by car". Its remote location. Accessed by the narrow, busy B1013 is not suitable for access by cycle or on foot.

It also contravenes PPS1 (27 vii) "Reduce the need to travel and encourage accessible public transport provision to secure more sustainable patterns of transport development. Planning should actively manage patterns of urban growth to make the fullest use of public transport and focus development in existing centres and near to major public transport interchanges".

Summary:

Proposals for moving employment to of town locations, at either end of the district, with no existing public transport inks, are contrary to government policy PPG4 & PPS1. It also contravenes the Core Strategy's stated aims of reducing carbon emissions; reliance on car transport and providing "an integrated network of cycle paths".

The Core Strategy also contravenes its own policy T1 and is unsound.

2. The Transport Evidence Base has not been re-evaluated following the decision to impose extra housing on the Eldon Way & Foundry Industrial Estates. ECC Highways have confirmed that the B1013 is running at 72% of its maximum theoretical capacity) and the effect of extra housing in Hockley (as well as Hawkwell) has not been re-evaluated and it is unclear what improvements will be required and whether they can be physically achieved.

Thus the proposals are not founded on a robust and credible evidence base and are unsound.

3. RCD are proposing to scatter housing across the district in around 12 or sites but no detailed consideration has been given to the implications for highways across the District. The "Core Strategy" is not a strategy but simply a collection of disparate sites. Many roads across the District are at or near capacity but no modelling has been undertaken to determine the impacts or the funding required to upgrade them. At the Central Area Committee on 25 June 2009, RDC stated (in response to a question):

"Rochford Council is not the highway authority, but is working closely with Essex County Council to identify highway infrastructure requirements. Highway infrastructure improvements will be set out in the Core Strategy and other subsequent Development Plan Documents as required. These will be fed into the next version of the Essex Local Transport Plan, which is effectively a bidding document for funds to implement highway infrastructure improvements, schemes to tackle congestion, etc.

The District Council is working closely with the Essex County Council to ensure that highway infrastructure identified in

16548 Object

CHAPTER 4 Appendix H1

the Core Strategy can be delivered."

It is clear that (i) the combined impact of scattering houses across the District and (ii) relocating Eldon Way/Foundry Industrial Estates to the very edge of the District with no public transport services will exacerbate existing problems. It is also clear that the extent of improvements required is both unknown and not funded and the proposal is unsound.

Summary:

RDC are proposing to scatter housing across the district in around 12 or sites but no detailed consideration has been given to the implications for highways across the District. Many roads across the District are at or near capacity but no modelling has been undertaken to determine the impacts.

It is clear that (i) the combined impact of scattering houses across the District and (ii) relocating Eldon Way/Foundry Industrial Estates with no public transport services will exacerbate existing problems. It is clear that the extent of improvements required is both unknown and not funded and the proposal is unsound.

4. PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs not, especially, costs have been identified and the Core Strategy is therefore unsound.

The district's highways suffer from years of under investment and over use. The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. Thus it is unclear if use of Standard Charges is financially viable.

Policy T2 provides a list of required highway improvements. The list contains most of the more major roads in the District including Rectory Lane, which has a single track, traffic light controlled railway bridge. 1200 dwellings are proposed for the northern end of Rectory Road and a further 175 at the southern end. The cost of address the railway bridge bottleneck will be significant but is not mentioned.

No attempt is made to either cost these charges or explain how improvements not linked to any one specific development will be paid for (eg B1013; Ashingdon Road; a network of walking, cycling, bridleways).

The concept of paying for improvements through use of Standard Charges is totally unproven and unsound.

Summary:

PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs nor, especially, costs have been identified and the Core Strategy is therefore unsound.

The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. It is therefore unclear if use of Standard Charges is financially viable.

5. SERT is put forward as a solution to reducing car use but it will only skirt the edge of the district and the Core Strategy acknowledges there is only "potential" to do so in the future. SERT is not realistic or reliable a solution and the proposal is therefore unsound.

6. Previous consultations ignored by RDC:

The Hockley Parish Plan (dated 2007), clearly states that residents are strongly against any large scale housing development in Hockley, but if there has to be additional housing, then there should be no loss of greenbelt or open spaces, and no large housing estate developments. It was also stated that any developments must be matched by the appropriate levels of infrastructure.

The proposals also ignore the 95% rejection rate of respondents to RDC's own Hockley Area Plan (HAAP) Consultation (2009), which included specific proposals for Eldon Way (although HAAP did not even mention the adjoining Foundry Industrial Estate). Why have a consultation and ignore it?

Thus the proposals are not founded on a robust and credible evidence base and are unsound.

Summary:

Previous consultations ignored by RDC:

The proposals ignore the 95% rejection rate of respondents to RDC's own Hockley Area Plan (HAAP) Consultation (2009), which included specific proposals for Eldon Way (although HAAP did not even mention the adjoining Foundry Industrial Estate). Why have a consultation and ignore it?

Thus the proposals are not founded on a robust and credible evidence base and are unsound.

16548 Object

CHAPTER 4 Appendix H1

7. RDC have not consulted on the very specific proposals to relocate the Eldon Way and Foundry Industrial Estates.

The previous CS Strategy stated "we will look at opportunities for more valuable and appropriate uses of the industrial land" with absolutely no consultation at all on concept of moving existing EW businesses entirely.

The Foundry Industrial Estates has never even been previously mentioned in any plan version; A recent amendment to the Core Strategy acknowledges this omission was due to a typing error!

The Urban Capacity study stated a "low probability" of housing and did not even mention the Foundry Estate

Thus the proposals are they are not founded on a robust and credible evidence base and are unsound.

Summary:

RDC have not consulted on the very specific proposals to relocate the Eldon Way and Foundry Industrial Estates.

The previous CS Strategy stated "we will look at opportunities for more valuable and appropriate uses of the industrial land" with absolutely no consultation at all on concept of moving existing FW businesses entirely.

The Foundry Industrial Estate has never even been previously mentioned.

The Urban Capacity study stated a "low probability" of housing and did not even mention the Foundry Estate.

Thus the proposals are they are not founded on a robust and credible evidence base and are unsound.

8. Eldon Way and Foundry Industrial Estates form a significant part of the ongoing HAAP consultation but the Core Strategy proposals pre-empt the next stage of the HAAP consultation.

Neither the Core Strategy or Hockley Area Action Plan (HAAP) defines its status relevant to the other plan and subsequent priorities. Why is there no cross-referencing between concurrent plans affecting the exact same piece of land?

There are also inconsistencies between the Core Strategy & HAAP regarding the description of proposed uses for the two industrial estates. The Core Strategy refers to Leisure, Commercial and Residential whilst HAAP mentions a "village green, introducing a significant area of public open space". There is not sufficient space for both and the Core Strategy is again pre-empting the ongoing HAAP.

If a decision is taken now, as part of the Core Strategy, to relocate all the existing businesses on the two estates, it will set a legal precedent which HAAP will need to follow and renders the next stage of HAAP virtually redundant. Particularly given the 95% rejection rate of respondents to the previous round of HAAP such an approach is entirely undemocratic and unsound.

Summary

The Core Strategy proposals pre-empt the next stage of the HAAP consultation and neither defines its status relevant to the other plan and subsequent priorities.

There are also inconsistencies between the Core Strategy & HAAP.

If a decision is taken as part of the Core Strategy, to relocate all the existing businesses on the two estates, it will set a legal precedent which HAAP will need to follow and renders the next stage of HAAP virtually redundant. Particularly given the 95% rejection rate of respondents to the previous round of HAAP such an approach is entirely undemocratic and unsound.

9. PPS12, 4.6, states that Cores Strategies show be flexible and "should be able to show how they will handle contingencies". Several large planning applications have already been submitted to RDC proposing developments outside the Core Strategy which do not indicate how such applications will be handled and does not comply with PPS12. Neither have RDC been able to advise residents how such changes will be made and the strategy is unsound.

10. The Core Strategy misrepresent the findings of The Retail & Leisure Study (R&LS) 2008.

The Core Strategy states (12.38) "The Retail & Leisure Study indicates Hockley has great potential. Hockley has been identified as having a need for additional convenience floorspace".

Whereas, the R&LS actually states:

1) (10.26) "the scale of need does not lend itself to a foodstore capable of retaining a significant proportion of main food shopping expenditure.

Core Strategy Submission Document

16548 Object

CHAPTER 4 Appendix H1

2) (10.28) "There is no immediate capacity for additional floor space."

3) (10.29) "we recommend that focus be maintained on developing Hockley's existing strengths, rather than retail expansion".

4) 10.31 "The current nature of Hockley does not lend itself to classification as a 'town centre' as defined by PPS6. Moreover, we have identified that it is a very small catchment population. Accordingly, the Council may wish to consider reclassifying Hockley from a town centre to a district centre".

The Core Strategy is inaccurate, misleading and unsound.

Summary:

The Core Strategy misrepresents the findings of The Retail & Leisure Study (R&LS) 2008. The Core Strategy states "The Retail & Leisure Study states Hockley has great potential and has a need for additional convenience floorspace". Whereas, the R&LS states: 1) "does not lend itself to a foodstore capable of retaining a significant proportion of main food shopping expenditure. 2) "There is no immediate capacity for additional space." 3) "we recommend that focus be maintained on developing Hockley's existing strengths." 4) "the Council may wish to consider reclassifying Hockley from a town centre to a district centre.

Summary: PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs nor, especially, costs have been identified and the Core Strategy is therefore unsound.

The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. It is therefore unclear if use of Standard Charges is financially viable.

Highway & Traffic Implications

Proposals for moving employment to out of town locations, at either end of the district, with no existing public transport links, are contrary to government policy PPG4. It also contravenes the Core Strategy's stated aims of reducing carbon emissions; reliance on car transport and providing "an integrated network of cycle paths".

The District of Rochford is predominately spread on a West/East axis along the railway line. Hockley is located in the middle of the district and the two estates are adjacent to the railway station. Bus services are poor with just 3* an hour (following a recent 50% reduction in services) and the operator has admitted they cannot compete with the railway making improvements to new sites away from major centres unlikely. (* one of the 3 services is paid for by ECC on a 6 mth trial and may be terminated in the new year).

However, the Core Strategy proposes to relocate these two estates to a greenfield site near the airport. This site is 2-3 miles from the nearest railway station and there are currently no bus services to the area. As a result, RDC are proposing to upgrade the nearest road to a dual-carriageway, although the main connecting road (the B1013), which runs through Hockley, will remain single-carriageway and is already at 72% of capacity (ECC Highways stats). This is despite extra traffic expected in the area as a result of the Joint Area Action Plan (JAAP) which proposes considerable growth at neighboring Southend Airport, as well as the new industrial estate.

The site selected for the new industrial estate also contravenes PPS4 which states;
â€¢ (EC7.3C) "out-of-centre sites, with preference given to sites which are or will be well served by a choice of means of transport and which are close to the centre and have a high likelihood of forming links with the centre. There is no existing public transport and no obvious likelihood of forming links with any existing centres.
â€¢ EC7.5 1 "whether the site is or will be accessible and well served by a choice of means of transport, especially public transport, walking and cycling, as well as by car". Its remote location. Accessed by the narrow, busy B1013 is not suitable for access by cycle or on foot.

It also contravenes PPS1 (27 vii) "Reduce the need to travel and encourage accessible public transport provision to secure more sustainable patterns of transport development. Planning should actively manage patterns of urban growth to make the fullest use of public transport and focus development in existing centres and near to major public transport interchanges".

The Core Strategy also contravenes its own policy T1 and is unsound.

Summary:

Proposals for moving employment to out of town locations, at either end of the district, with no existing public transport links, are contrary to government policy PPG4 & PPS1. It also contravenes the Core Strategy's stated aims of reducing carbon emissions; reliance on car transport and providing "an integrated network of cycle paths".

The Core Strategy also contravenes its own policy T1 and is unsound.

The Transport Evidence Base has not been re-evaluated following the decision to impose extra housing on the Eldon Way & Foundry Industrial Estates. ECC Highways have confirmed that the B1013 is running at 72% of its maximum theoretical capacity) and the effect of extra housing in Hockley (as well as Hawkwell) has not been re-evaluated and it is unclear what improvements will be required and whether they can be physically achieved.

Thus the proposals are not founded on a robust and credible evidence base and are unsound

RDC are proposing to scatter housing across the district in around 12 or sites but no detailed consideration has been given to the implications for highways across the District. The "Core Strategy" is not a strategy but simply a collection of disparate sites. Many roads across the District are at or near capacity but no modelling has been undertaken to determine the impacts or the funding required to upgrade them. At the Central Area Committee on 25 June 2009, RDC stated (in response to a question):

"Rochford Council is not the highway authority, but is working closely with Essex County Council to identify highway infrastructure requirements. Highway infrastructure improvements will be set out in the Core Strategy and other subsequent Development Plan Documents as required. These will be fed into the next version of the Essex Local Transport Plan, which is effectively a bidding document for funds to implement highway infrastructure improvements, schemes to tackle congestion, etc.

The District Council is working closely with the Essex County Council to ensure that highway infrastructure identified in the Core Strategy can be delivered."

It is clear that (i) the combined impact of scattering houses across the District and (ii) relocating Eldon Way/Foundry Industrial Estates to the very edge of the District with no public transport services will exacerbate existing problems. It is also clear that the extent of improvements required is both unknown and not funded and the proposal is unsound.

Highway & Traffic Implications

Proposals for moving employment to out of town locations, at either end of the district, with no existing public transport links, are contrary to government policy PPG4. It also contravenes the Core Strategy's stated aims of reducing carbon emissions; reliance on car transport and providing "an integrated network of cycle paths".

The District of Rochford is predominately spread on a West/East axis along the railway line. Hockley is located in the middle of the district and the two estates are adjacent to the railway station. Bus services are poor with just 3* an hour (following a recent 50% reduction in services) and the operator has admitted they cannot compete with the railway making improvements to new sites away from major centres unlikely. (* one of the 3 services is paid for by ECC on a 6 mth trial and may be terminated in the new year).

However, the Core Strategy proposes to relocate these two estates to a greenfield site near the airport. This site is 2-3 miles from the nearest railway station and there are currently no bus services to the area. As a result, RDC are proposing to upgrade the nearest road to a dual-carriageway, although the main connecting road (the B1013), which runs through Hockley, will remain single-carriageway and is already at 72% of capacity (ECC Highways stats). This is despite extra traffic expected in the area as a result of the Joint Area Action Plan (JAAP) which proposes considerable growth at neighboring Southend Airport, as well as the new industrial estate.

The site selected for the new industrial estate also contravenes PPS4 which states;
â€¢ (EC7.3C) "out-of-centre sites, with preference given to sites which are or will be well served by a choice of means of transport and which are close to the centre and have a high likelihood of forming links with the centre. There is no existing public transport and no obvious likelihood of forming links with any existing centres.
â€¢ EC7.5 1 "whether the site is or will be accessible and well served by a choice of means of transport, especially public transport, walking and cycling, as well as by car". Its remote location. Accessed by the narrow, busy B1013 is not suitable for access by cycle or on foot.

It also contravenes PPS1 (27 vii) "Reduce the need to travel and encourage accessible public transport provision to secure more sustainable patterns of transport development. Planning should actively manage patterns of urban growth to make the fullest use of public transport and focus development in existing centres and near to major public transport interchanges".

The Core Strategy also contravenes its own policy T1 and is unsound.

Summary:

Proposals for moving employment to out of town locations, at either end of the district, with no existing public transport links, are contrary to government policy PPG4 & PPS1. It also contravenes the Core Strategy's stated aims of reducing carbon emissions; reliance on car transport and providing "an integrated network of cycle paths".

The Core Strategy also contravenes its own policy T1 and is unsound.

The Transport Evidence Base has not been re-evaluated following the decision to impose extra housing on the Eldon Way & Foundry Industrial Estates. ECC Highways have confirmed that the B1013 is running at 72% of its maximum theoretical capacity) and the effect of extra housing in Hockley (as well as Hawkwell) has not been re-evaluated and it is unclear what improvements will be required and whether they can be physically achieved.

Thus the proposals are not founded on a robust and credible evidence base and are unsound

RDC are proposing to scatter housing across the district in around 12 or sites but no detailed consideration has been given to the implications for highways across the District. The "Core Strategy" is not a strategy but simply a collection of disparate sites. Many roads across the District are at or near capacity but no modelling has been undertaken to determine the impacts or the funding required to upgrade them. At the Central Area Committee on 25 June 2009, RDC stated (in response to a question):

"Rochford Council is not the highway authority, but is working closely with Essex County Council to identify highway infrastructure requirements. Highway infrastructure improvements will be set out in the Core Strategy and other subsequent Development Plan Documents as required. These will be fed into the next version of the Essex Local Transport Plan, which is effectively a bidding document for funds to implement highway infrastructure improvements, schemes to tackle congestion, etc.

The District Council is working closely with the Essex County Council to ensure that highway infrastructure identified in the Core Strategy can be delivered."

It is clear that (i) the combined impact of scattering houses across the District and (ii) relocating Eldon Way/Foundry Industrial Estates to the very edge of the District with no public transport services will exacerbate existing problems. It is also clear that the extent of improvements required is both unknown and not funded and the proposal is unsound.

16599 Object

CHAPTER 4 Appendix H1

Summary:

RDC are proposing to scatter housing across the district in around 12 or sites but no detailed consideration has been given to the implications for highways across the District. Many roads across the District are at or near capacity but no modeling has been undertaken to determine the impacts

It is clear that (i) the combined impact of scattering houses across the District and (ii) relocating Eldon Way/Foundry Industrial Estates with no public transport services will exacerbate existing problems. It is clear that the extent of improvements required is both unknown and not funded and the proposal is unsound.

PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs nor, especially, costs have been identified and the Core Strategy is therefore unsound.

The district's highways suffer from years of under investment and over use. The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. It is therefore unclear if use of Standard Charges is financially viable.

Policy T2 provides a list of required highway improvements. The list contains most of the more major roads in the District including Rectory Lane, which has a single track, traffic light controlled railway bridge. 1200 dwellings are proposed for the northern end of Rectory Road and a further 175 at the southern end. The cost of addressing the railway bridge bottleneck will be significant but is not mentioned.

No attempt is made to either cost these charges or explain how improvements not linked to any one specific development will be paid for (eg B1013; Ashingdon Road; a network of walking, cycling, bridleways).

The concept of paying for improvements through use of Standard Charges is totally unproven and unsound.

Summary:

PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs nor, especially, costs have been identified and the Core Strategy is therefore unsound.

The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. It is therefore unclear if use of Standard Charges is financially viable.

SERT is put forward as a solution to reducing car use but it will only skirt the edge of the district and the Core Strategy acknowledges there is only "potential" to do so in the future. SERT is not realistic or reliable a solution and the proposal is therefore unsound.

Previous consultations ignored by RDC:

• The Hockley Parish Plan (dated 2007), clearly states that residents are strongly against any large scale housing development in Hockley, but if there has to be additional housing, then there should be no loss of greenbelt or open spaces, and no large housing estate developments. It was also stated that any developments must be matched by the appropriate levels of infrastructure.

• The proposals also ignore the 95% rejection rate of respondents to RDC's own Hockley Area Plan (HAAP) Consultation (2009), which included specific proposals for Eldon Way (although HAAP did not even mention the adjoining Foundry Industrial Estate). Why have a consultation and ignore it?

Thus the proposals are not founded on a robust and credible evidence base and are unsound.

Summary:

Previous consultations ignored by RDC:

The proposals ignore the 95% rejection rate of respondents to RDC's own Hockley Area Plan (HAAP) Consultation (2009), which included specific proposals for Eldon Way (although HAAP did not even mention the adjoining Foundry Industrial Estate). Why have a consultation and ignore it?

Thus the proposals are not founded on a robust and credible evidence base and are unsound

RDC have not consulted on the very specific proposals to relocate the Eldon Way and Foundry Industrial Estates

• The previous CS Strategy stated "we will look at opportunities for more valuable and appropriate uses of the industrial land" with absolutely no consultation at all on concept of moving existing EW businesses entirely

• the Foundry Industrial Estate has never even been previously mentioned in any plan version; A recent amendment to the Core Strategy states this omission was due to a typing error!

• The Urban Capacity study stated a "low probability" of housing and did not even mention the Foundry Estate

Thus the proposals are they are not founded on a robust and credible evidence base and are unsound.

Summary:

RDC have not consulted on the very specific proposals to relocate the Eldon Way and Foundry Industrial Estates

• The previous CS Strategy stated "we will look at opportunities for more valuable and appropriate uses of the industrial land" with absolutely no consultation at all on concept of moving existing EW businesses entirely

Core Strategy Submission Document

CHAPTER 4 Appendix H1

â€¢ the Foundry Industrial Estate has never even been previously mentioned;
â€¢ The Urban Capacity study stated a "low probability" of housing and did not even mention the Foundry Estate

Thus the proposals are they are not founded on a robust and credible evidence base and are unsound.

Eldon Way and Foundry Industrial Estates form a significant part of the ongoing Hockley Area Action Plan (HAAP) consultation but the Core Strategy proposals pre-empt the next stage of the HAAP consultation.

Neither the Core Strategy nor HAAP define its status relevant to the other plan and subsequent priorities. Why is there no cross-referencing between concurrent plans affecting the exact same piece of land?

There are also inconsistencies between the Core Strategy & HAAP regarding the description of proposed uses for the two industrial estates. The Core Strategy refers to Leisure, Commercial and Residential whilst HAAP mentions a "village green, introducing a significant area of public open space". There is not sufficient space for both and the Core Strategy is again pre-empting the ongoing HAAP.

If a decision is taken now, as part of the Core Strategy, to relocate all the existing businesses on the two estates, it will set a legal precedent which HAAP will need to follow and renders the next stage of HAAP virtually redundant. Particularly given the 95% rejection rate of respondents to the previous round of HAAP such an approach is entirely undemocratic and unsound.

Summary:

The Core Strategy proposals pre-empt the next stage of the HAAP consultation and neither defines its status relevant to the other plan and subsequent priorities.

There are also inconsistencies between the Core Strategy & HAAP.

If a decision is taken as part of the Core Strategy, to relocate all the existing businesses on the two estates, it will set a legal precedent which HAAP will need to follow and renders the next stage of HAAP virtually redundant. Particularly given the 95% rejection rate of respondents to the previous round of HAAP such an approach is entirely undemocratic and unsound.

PPS12, 4.6, states that Cores Strategies should be flexible and "should be able to show how they will handle contingencies". Several large planning applications have already been submitted to RDC proposing developments outside the Core Strategy which does not indicate how such applications will be handled and does not comply with PPS12. Neither have RDC been able to advise residents how such changes will be made and the strategy is unsound.

THE Core Strategy misrepresents the findings of The Retail & Leisure Study (R&LS) 2008.

The Core Strategy states (12.38) "The Retail & Leisure Study indicates Hockley has great potential. Hockley has been identified as having a need for additional convenience floorspace".

Whereas, the R&LS actually states:

- 1) (10.26) "the scale of need does not lend itself to a foodstore capable of retaining a significant proportion of main food shopping expenditure.
 - 2) (10.28) "There is no immediate capacity for additional floor space."
 - 3) (10.29) "we recommend that focus be maintained on developing Hockley's existing strengths, rather than retail expansion"
 - 4) 10.31 "The current nature of Hockley does not lend itself to classification as a 'town centre' as defined by PPS6. Moreover, we have identified that it is a very small catchment population. Accordingly, the Council may wish to consider reclassifying Hockley from a town centre to a district centre".
- The Core Strategy is inaccurate, misleading and unsound.

Summary:

The Core Strategy misrepresents the findings of The Retail & Leisure Study (R&LS) 2008. The Core Strategy states "The Retail & Leisure Study states Hockley has great potential and has a need for additional convenience floorspace". Whereas, the R&LS states: 1) "does not lend itself to a foodstore capable of retaining a significant proportion of main food shopping expenditure. 2) "There is no immediate capacity for additional floor space." 3) "we recommend that focus be maintained on developing Hockley's existing strengths." 4) " the Council may wish to consider reclassifying Hockley from a town centre to a district centre".

Summary:

Summary:

PPS12 4.9 states "The infrastructure planning process should identify, as far as possible: infrastructure needs and costs". Neither needs nor, especially, costs have been identified and the Core Strategy is therefore unsound.

The Core Strategy proposes to fund infrastructure improvements through use of Standard Charges. However, no detail is provided and no attempt made to identify the likely scale of such charges. It is therefore unclear if use of Standard Charges is financially viable.

Appendix H1 - New infrastructure and services to accompany residential development

Summary: The Respondent finds the document to be unsound in its present form, however were the amendments set out in these representations to be incorporated then it is considered that the document will be sound. Whilst it is accepted that it is helpful to identify the new infrastructure and services required to accompany residential development, there is concern that some of the requirements may be excessive given the extent of development proposed.

Full text: With regard to land at East Ashingdon, this site is identified as having a number of new infrastructure and service requirements. Our clients control this land and it is envisaged that the majority of the items identified would form an integral part of any proposals for this area. However we have the following concerns:

1. It is not clear from the evidence base that there is a solid need to expand the school by the 3 hectares referred to in Policy CLT3. Discussions with Essex County Council Education have not been conclusive. The Respondent's master plan illustrates a 3 hectare area of land that could be provided, however the size of this land could vary and should not be fixed until further evidence is provided.

2. Public open space, play space and youth facilities and community facilities are listed as requirements. Whilst it is envisaged that public open space and play space would be provided as part of the development, it is considered that the on site provision of youth facilities and community facilities would be excessive given the scale of the proposals and the other contributions required. Further, Appendix H1 identifies that youth facilities and community facilities are also proposed at South-East Ashingdon, just a short distance from East Ashingdon and therefore it would seem excessive to have youth and community provision on both sites. It should be noted that the site lies in close proximity to a secondary school, which already has sport and recreation facilities i.e. all weather pitch.

Whilst the principle of contributing to the infrastructure and services listed is supported, it is suggested that this should either be in the form of on site contributions or financial contributions towards off site facilities and services in accordance with Policy CLT1.

Proposed Amendment to Appendix H1: For this Appendix to be sound, the heading of the second column should be amended to read "Contributions required for new infrastructure and services to accompany residential development".

Masterplan/Facilities plan Council ref AE22

Full Text: ROCHFORD CORE STRATEGY SUBMISSION DOCUMENT, SEPTEMBER 2009
RESPONSE OF ESSEX COUNTY COUNCIL

1. General Comment

Essex County Council welcomes and broadly supports the Core Strategy prepared by Rochford District Council. The Strategy contains policies and proposals that address the spatial characteristics, issues and opportunities facing the District whilst respecting the distinctive qualities of the different settlements and parts of the District.

The County Council fully supports the maintenance of a strong policy approach to protection of the Green Belt and of the quality of environmental assets in the District whilst making adequate housing and employment provision within the District. The Core Strategy presents an approach that emphasises a balance of opportunity through the District and recognition of emerging economic prospects in the District and neighbouring areas. The intended preparation of more detailed Action Area Plans for London Southend Airport and its environs and for each of the three town centres of Rayleigh, Rochford and Hockley will further enhance the approach of the Core Strategy. The emphasis on the three town centres is particularly welcomed as offering a stimulus to improvement in the services and facilities available locally within the District whilst also affording possibilities of increased community focus.

2. Housing Distribution and Locations

The East of England Plan requires Rochford to provide a minimum of 3,790 additional dwellings between 2006 and 2021. In addition, provision for a further 1,000 dwellings should be made between 2021 and 2025 to ensure delivery of housing for at least 15 years from adoption of the Core Strategy (expected in 2010). Of this total requirement the District Council has identified a capacity of 2,000 dwellings through a Strategic Housing Land Availability Assessment. This means that the Core Strategy has to identify locations for about 1,750 dwellings to be delivered before 2021 and a further 1,000 dwellings between 2021 and 2025.

Policy H1 (The efficient use of land for housing) is supported. However, prioritisation of the reuse of previously developed land within settlements for additional housing is unlikely to provide a sufficient source of provision due to the generally residential nature of existing settlements in the district and the absence of potentially large sites of previously developed land. The assessment of potential for additional housing provision within settlements already includes the proposed re-allocation to substantially residential use of 4 existing employment areas.

Within Policy H2 (Extensions to residential envelopes and phasing) and Policy H3 (Extension to residential envelopes post-2021) the District Council has adopted a balanced approach to the distribution of additional housing locations, which is based on identification of tiers of settlements defined by reference to their accessibility to jobs, services and facilities (some of which lie outside the District) and the need to protect the valued environments within the District. This approach is generally supported, although implementation and delivery of individual schemes should give further thought to securing sustainable functional relationships between proposed development locations and availability of jobs, services and facilities.

The proposed scale and phasing of development at each of the identified locations in Policy H2 and Policy H3 should be capable of being supported by County Council service groups, provided that adequate and timely funding is available. The County Council would wish to work with the District Council to ensure that future infrastructure and facilities would serve and give benefit to the existing adjoining community as well as to the new development. In this respect it is noted that the Core Strategy proposes preparation by the District Council of a Planning Obligations and Standard Charges document (Policy CLT1). The District Council's document should fully reflect the County Council's own approach to this matter as set out in the County Council's 'Developer's Guide to Infrastructure Contributions'.

3. Economic Development

The approach to Employment Growth (Policy ED1) is supported. Given the economic structure of Rochford District the support to be given to protection and enhancement of the role of small and medium sized businesses; enhancement of the District's commercial centres; and development of a skills training academy is particularly welcome. These measures will assist in building on the existing economic resource of the District.

Proposals for the comprehensive development of London Southend Airport and its environs (Policy ED2) are supported.

16700 Object

CHAPTER 4 Appendix H1

The further elaboration of proposals through an Area Action Plan will provide a firm foundation to realise the economic regeneration and growth opportunities presented by effective use of the Airport. The recognition of the potential environmental impact of the Airport and the commitment to work to mitigate any adverse impacts on the environment and local amenities is fully supported.

The location of the proposed Eco-Enterprise Centre to the North of London Southend Airport (Policy ED4) is supported. Creation of the Centre would assist reduction of the rate of business start-up failure in the district. Further the proposed location for the Centre would afford a clear offer to businesses within an area of varied business activity.

The continued protection and enhancement of existing employment land (Policy ED3) is supported, as is the identification of 4 existing employment sites for appropriate alternative, substantially residential, uses. Each of the 4 sites affords particular issues and opportunities whereby their redevelopment for other uses and relocation of existing occupiers would confer advantage for the immediately neighbouring areas and for the District as a whole.

4. Town Centres

The town centres of Rayleigh, Rochford and Hockley, and future plans for them, are closely linked to the economic development of the District but also present the opportunity to offer greater community focus within the District. The varied approach being taken to each of these town centres is supported (Policy RTC4, RTC5 and RTC6), notably the recognition of the role and purpose of the town centres beyond retail uses.

The contribution that the County Library service could make to plans for the town centres should not be overlooked. The 5 libraries in the District are substantial footfall draws in their localities and act as a 'community anchor store'. This has knock-on effects in encouraging use of neighbouring retail and service facilities. Further the Library service is currently looking at co-location opportunities for other services within the libraries which would enable them to act as a community focus.

5. Transport

The transport aspects of the Core Strategy are well balanced in identifying potential measures that would meet the needs of existing residents and businesses in the District as well as needs arising from future development. The approach reflects and makes good reference to the transportation aspirations of the County Council. The policy emphasis on close working between the District Council and the County Council to advance the transport aspirations is welcomed and fully supported.

In relation to parking standards (Policy T8 and Paragraph 10.30) the review undertaken by Essex County Council in conjunction with the Essex Planning Officers Association has now been completed. Revised parking standards have been agreed and signed off as County Supplementary Guidance, in accordance with PPS12, and is being applied by the County Council as Local Highways Authority.

6. Coastal Protection Belt

Policy ENV2 (Coastal Protection Belt) is not supported because in its current form it is not a suitable or effective replacement policy for Policy CC1 of the Replacement Structure Plan. Structure Plan Policy CC1 (The Undeveloped Coast - Coastal Protection Belt) currently remains a 'saved' policy of the Essex and Southend-on-Sea Replacement Structure Plan, April 2001 (following a direction of the Secretary of State, dated 27th September 2007, under paragraph 1(3) of Schedule 8 to the Planning and Compulsory Purchase Act 2004). The existing Policy CC1 reads, 'Within the Coastal Protection Belt defined in adopted local plans there shall be the most stringent restrictions on development within the rural and undeveloped coastline situated outside existing built-up areas, and any development which is exceptionally permitted within this Belt shall not adversely affect the open and rural character, historic features or wildlife.'

Core Strategy Policy ENV2 should be revised to include specific reference to,

- * Definition of the boundary of the Coastal Protection Belt in another Development Plan Document;
- * the application of the most stringent restrictions on development within the rural and undeveloped coastline;
- * any development exceptionally permitted not adversely affecting the open and rural character, historic features or wildlife.

7. Historic Environment

The importance of the historic environment in Rochford District is clearly identified within the Core Strategy document. Nevertheless, the policy guidance could be usefully enhanced to promote consideration and enhancement of the historic environment and use of the historic environment to shape place. This would be achieved by the following amendments to the Core Strategy,

- * Policy ENV1 (Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites) should be amended by deletion of the final sentence and its replacement with, The Council is committed to the protection, promotion and enhancement of the diverse historic landscape and extensive surviving archaeological deposits of the District.

16700 Object

CHAPTER 4 Appendix H1

* Paragraph 8.15 of the supporting text should be amended to better support the suggested amendment to Policy ENV1. The existing text of Paragraph 8.15 should be deleted in its entirety and replaced by,
The historic environment of Rochford District has developed through a history of human activity that spans over 450,000 years. Much of the resource lies hidden beneath the ground in the form of archaeological deposits. Other elements such as the historic landscape, the pattern of field, farms, woods and grazing marsh which characterise the District, are a highly visible record of millennia of agriculture, industry and commerce. Of particular significance are the coastal, island and estuarine areas where multi-period landscapes reflecting the exploitation of coastal and marshland resource survive. The District also includes the important historic medieval market towns of Rochford and Rayleigh.

* Page 16 (Sustainable Community Strategy Priority: Promoting a Greener District) should be amended to further support the approach to the Historic Environment. The fourth bullet of the Key Section/Policies of the Core Strategy should be amended to include the word 'historic', so that the first sentence of the bullet would read,
The Environment chapter seeks to protect and enhance the biodiversity, historic and natural environment of the District by protecting sites of local, national and international importance.

8. Community Infrastructure

The approach to Community Infrastructure is supported. The County Council would wish to work with the District Council to ensure that future community infrastructure and facilities would serve and give benefit to the existing adjoining community as well as to the new development. In this respect it is noted that the Core Strategy proposes preparation by the District Council of a Planning Obligations and Standard Charges document (Policy CLT1). The District Council's document should fully reflect the County Council's own approach to this matter as set out in the County Council's 'Developer's Guide to Infrastructure Contributions'.

In addition, it should be noted that,

* Some County Council services are not highly visible despite being regarded as highly desirable community services by local residents. The need to ensure adequate funding and contributions to enable these services to meet community expectations should be recognised and acknowledged in consideration of planning obligations and standard charges.

* The Adult Community Learning Centre at Rocheway, Rochford could be better located with regard to the wider Rochford/Castle Point area of service. Relocation of the Centre could provide opportunities both at the new location and for the current site.

* The Core Strategy should make specific reference to,

o Appendix H1, Location at South Canewdon: new Early Years and Childcare facilities;

o Policy CLT2, final sentence: insert after the words 'primary schools' the words 'and Early Years and Childcare facilities';

o Appendix CLT1, Other issues/comment: for Early years and childcare facilities add 'Land to be allocated within new residential areas, as appropriate'.

9. Implementation, Delivery and Monitoring

The inclusion in the Core Strategy of a section considering Implementation, Delivery and Monitoring is welcomed and supported. Nevertheless, the District Council, in moving towards implementation and delivery of the individual elements of the Core Strategy, should highlight those schemes and projects that are critical to achievement of other aspects of the Strategy.

Further, the monitoring proposal for Policy H6 (Lifetime Homes) and for Policy CP1 (Design) should be amended,

* Policy H6 (Lifetime Homes) - the identified monitoring tool is Core Indicator H6 Housing Quality Building for Life Assessments. The Building for Life Assessment methodology was devised to measure the overall design/layout quality of housing developments. It was not devised to measure compliance with Lifetime Homes, which is largely, but not exclusively, concerned with internal space standards and the provision of internal arrangements within dwellings to meet needs of all residents.

* Policy CP1 (Design) - the monitoring indicator proposed by the Core Strategy is not supported because it is unclear what the indicator would actually be measuring. The proposed indicator should be replaced by the Core Indicator, Housing Quality - Building for Life Assessments, as suggested by the County Council in its response to the Core Strategy Preferred Options, October 2008. A better approach would be to base evaluation and monitoring of Policy CP1 on the Commission for Architecture and the Built Environment's (CABE) 20 Building for Life principles, particularly as Government has endorsed these principles and is urging local authorities to use them to assess design quality. It is suggested that the monitoring arrangements for Preferred Option CP1 be deleted and replaced by the following text, 'The success of the implementation of this policy will be monitored by assessing schemes, or an appropriate sample of schemes, against the Commission for Architecture and the Built Environment's (CABE) Building for Life principles.'

10. Access to Housing

The Core Strategy notes the higher prevalence of older people in Rochford District and the need to support them. However, a more broadly based approach to access to housing should be adopted by Policies H4, H5 and H6. It should recognise the presence of other vulnerable adults in the community, for example, those with learning or mental health disability, and the range of possible forms of accommodation, including supported, sheltered and extra care accommodation. The high level of owner occupation in the District further emphasises the need for a broader approach. The emphasis on Lifetime Homes would not address the variety of future needs, whilst the potential exemptions to the

Core Strategy Submission Document

CHAPTER 4 Appendix H1

Summary: Lifetime Homes policy standard in Policy H6 are likely to act against demographic trends. The approach to Community Infrastructure is supported. The County Council would wish to work with the District Council to ensure that future community infrastructure and facilities would serve and give benefit to the existing adjoining community as well as to the new development. In this respect it is noted that the Core Strategy proposes preparation by the District Council of a Planning Obligations and Standard Charges document (Policy CLT1). The District Council's document should fully reflect the County Council's own approach to this matter as set out in the County Council's 'Developer's Guide to Infrastructure Contributions'.

In addition, it should be noted that,

* Some County Council services are not highly visible despite being regarded as highly desirable community services by local residents. The need to ensure adequate funding and contributions to enable these services to meet community expectations should be recognised and acknowledged in consideration of planning obligations and standard charges.

* The Adult Community Learning Centre at Rocheway, Rochford could be better located with regard to the wider Rochford/Castle Point area of service. Relocation of the Centre could provide opportunities both at the new location and for the current site.

Representations on the Core Strategy
Submission Document, November 2009
On behalf of Barratts Eastern Counties

Introduction

The requirements of Core Strategies are enshrined in the 2004 Planning and Compensation Act, the Town & Country Planning (Local Development) England (Regulations) 2004 and the 2008 policy guidance in PPS12. The requirements of Coe Strategies are clear. And they are legal requirements. The Core Strategy must comply with the Local Development Scheme, Statement of Community Involvement and the Regulations. The Core Strategy must be subject to a sustainability appraisal, have regard to national guidance, conform generally with the Regional Spatial Strategy and have regard to any Sustainable Community Strategy. A Core strategy must be sound - justified, effective and consistent with national policy. The following representations therefore focus on these legal requirements.

HOUSING

Paragraph 4.6 - Evidence Base

To meet the soundness test Submission Core Strategies (SCS) must be justified, that is to say it must be founded on robust and credible evidence base and comprise the most appropriate strategy when considered against reasonable alternatives. The housing strategy in as far as it identifies a need for Green belt sites is sound, however, there are other elements which are unsound.

Paragraph 4.6 notes that the Strategic Housing Land Availability Assessment (SHLAA) has examined the supply of housing. It is presumed that the Table at paragraph 4.6 is the outcome of this examination. Whilst the SHLAA has some legitimacy in that it identifies various sites that are apparently available, we are concerned that because the SHLAA was only published in November 2009 it post dates the SCS. This implies that the SCS is driving the SHLAA exercise rather than the other way round. Whilst this may have no real practical effect on the outcome of the SCS and the identified need for Green Belt sites, the Inspector will be mindful of the advice in paragraphs 33 and 54 of PPS3 that SCS draw on the evidence in SHLAA. It may be that the SCS should explain how the evidence base has been used to justify the strategy.

PPS12 explains at paragraph 4.37 that Core Strategies are based on thorough evidence. Since the SHLAA has only recently been published it is considered that the SCS is unsound as it is not justifiable. This, together with other comments on the SCS, indicates that the process should be delayed to ensure that a more robust document is placed in front of the EiP Inspector.

Table at Paragraph 4.6 - Evidence base

From our review of the available evidence it would appear that the housing land supply is insufficient and that Green Belt release are required. From the wider strategy being promoted we note that some of the sites that the District Council consider to be 'appropriate' are likely to relate to existing employment areas. As set out elsewhere in our representations, we maintain severe reservations that the redevelopment of existing employment sites for alternative uses and particularly the Eldon Way Industrial Estate is unsustainable. We will make reference to the effectiveness of this strategy in relation to sustainability, whether it is justified in the context of National Policy and the deliverability of such a strategy elsewhere.

In particular, paragraph 11.32 of the SCS refers to existing employment land and sites within the UCS. It does not refer the SHLAA and as such it appears that an evidence base to support the re-use of employment land for residential is not reported in the SCS.

Having reviewed the 2008 Annual Monitoring Report, as we did when commenting on the 2008 Preferred Options Core Strategy, we maintain severe doubts as to the appropriateness of some of the previously developed sites identified as potential housing sites and their expected housing yield. Whilst we cannot at this stage ascertain whether the SHLAA

16927 Support

CHAPTER 4 Appendix H1

sites referred to in this table correlate with the Annual Monitoring Report and indeed the 2007 Urban Capacity Study, it is our view that there will be some commonality and so the reliance on these sites is likely to be at odds with Government Policy. We shall elaborate on this objection in relation to the specific housing policy below.

We note that the last two rows in the Table at paragraph 4.6 set out figures with and without Green Belt releases. The text to this section of the Core Strategy should, for reasons of clarity, explain that Green belt review will be necessary in order to deliver the required housing.

Paragraph 4.9

The table on page 40, which sets out the settlement tiers, is supported. Rayleigh, Rochford/Ashingdon, Hockley/Hawkwell are clearly the largest settlements in the District and they benefit from good employment, housing, leisure, community and public transport provision. These settlements are the most sustainable ones with the greatest mix of uses. Consequently, it is sensible that the Core Strategy identifies these as top tier settlements and is able to target them with growth accordingly. This component of the strategy is justified by reference to sustainability data and is effective, since targeting development at these locations will ensure a more sustainable pattern of development.

Paragraph 4.14

We maintain that the strategy for redeveloping the Eldon Way Industrial Estate for housing and other alternative uses to employment is unsound. It is neither justified nor effective. The Industrial Land Availability Study 2006 sets out on page 7 strategic objectives. The 3rd objective seeks to Support town centre and industrial estate enhancement initiatives aimed at improving the environment ensuring the area is economically prosperous and competitive. Clearly the strategy as currently drafted envisages major changes to existing industrial estates, including alternative uses. This strategy is not consistent with other strategies and evidence based studies and so cannot be justified in the context of the tests set out in PPS12. It is also an ineffective strategy since the new employment locations that would free up the Eldon Way site for redevelopment relies on transport infrastructure that has no certainty of being delivered. Principally, the erosion of employment uses at Eldon Way could make the settlement of Hockley/Hawkwell less sustainable and thus conflict with the tiered approach on page 40, paragraph 4.9.

Policy H1

Prioritising the use of previously developed land ("pdl") is supported in principle. It is a justified strategy in the context of PPS3 and effective as sequential choices can be made by implementing the policy. However, the District Council is also promoting a strategy which seeks the redevelopment of existing employment locations to alternative uses and by consequence is identifying green field sites for new employment development elsewhere (Policy ED4 refers). This 'land swapping' is not considered consistent with PPS3, nor is it considered to be justified or effective in delivering the desired strategy. This is particularly the case as most of the existing employment sites are occupied and therefore unavailable for redevelopment. In addition, the new Greenfield sites are in an arguably less sustainable locations away from the top tier settlements identified on page 40 of the Submission Core Strategy. Clearly this element of the strategy is inconsistent with the wider strategy.

The Industrial Land Availability Study 2006 is included as an evidence base by the District Council. It includes an introductory section, which explains that the authority wishes to make Rochford the place of choice for new business. It includes several strategic objectives on page 7 including "Support town centre and industrial estate enhancement initiatives aimed at improving the environment ensuring the area is economically prosperous and competitive." It reviews existing employment areas and identifies vacant land, including land available from allocations. It does not include any assessment of new sites or potential opportunities for new sites that might have been expected to feed into the Core Strategy. The strategy for identifying Green Belt site employment allocation does not appear to be based on any evidence in this document and in that context cannot be justified. The strategy being promoted potentially conflicts with Government policy in PPG13, PPG2 and emerging PPS4.

The Employment Land Study 2008 is a much later document. It has a key recommendation on page ii "we recommend that Rochford District Council adopts strong policies to protect existing employment land." Furthermore under recommendations for existing sites on page iii-iv of that document it states "In our view, Hockley Trading Centre is a strategically well placed employment location. However, we recognise the ambitions of the Hockley Town Centre masterplan and that within this the Council should consider it to be allocated for other uses. However, we recommend that this reallocation happen only if provision is made within the masterplan for office use within Hockley Town Centre as part of a mixed use scheme." The view of the writers of this document is clear - the Eldon Way Industrial estate (Hockley Trading Centre) is a good employment site and that it is for other reasons that alternative uses are being considered and only then if office development is supported. This supports our representations that new future uses at the Eldon Way site should be employment dominated and that alternative uses should relate to the objectives of the Town Centre which is to enhance the shopping and leisure facilities. Residential is not an appropriate alternative.

This document recommends the use of land to the west of Rayleigh for employment and envisages Green belt release. However, the SCS does not explain through the evidence base why existing employment sites should be 'deallocated' and Green belt land unnecessarily used.

16927 Support

CHAPTER 4 Appendix H1

In addition to these key issues we have some specific concerns. As a consequence we maintain an objection to the second paragraph of Policy H1. This policy states that the Council will seek the redevelopment of various industrial estates including Eldon Way. The Policy says that alternative uses will be sought (presumably alternative to the existing employment offer) and that new land will be allocated elsewhere. This policy statement, in relation to Eldon Way in particular, is unsound for a number of reasons:

The emerging Hockley Area Action Plan consulted upon in 2008 states that the Eldon Way Industrial Estate is strategically well placed. In a sense this statement underplays the true importance of this highly sustainable employment location and only major employment area in Hockley/Hawkwell. The employment area is adjacent to the railway station and located a short distance from the main bus routes that run along Spa Road. Some of the residential areas of the town are also within walking distance of this commercial area, thus providing a potential for sustainable travel by employees. The Eldon Way Industrial Estate is therefore right at the heart of the settlement of Hockley/Hawkwell and provides an opportunity to meet sustainable transport objectives by reducing the need to travel by car. Consequently, this employment area should be highlighted as a premier employment site in sustainability terms, both in the context of PPG13, PPG4 and PPS6. To encourage alternative uses as set out in Policy H1 implies the removal of the majority of employment based activity at Hockley/Hawkwell and this would be contrary to National policy, would not be the most appropriate strategy when considered against alternatives and is therefore unsound.

Whilst it is acknowledged that improvement to the Eldon Way Industrial Estate can and should take place, the extent to which the mix of employment uses should be altered in favour of alternative land uses requires careful consideration. It is our view that a mix of existing or indeed new employment land uses with some Town Centre type uses should dominate the Eldon Way site. A mix of employment types between offices, light industry and other high technology industries should be encouraged as this will provide many locational advantages to the firms that agglomerate together. The Council says that the existing uses on this site are harmful to amenity. However, the site has operated for many years without any significant issues and if renewal for B1 type uses are encouraged then the employment area can be maintained without harm to amenity. Renewal of the employment stock can help develop and improve trade, improve the sustainability of businesses as a whole and make for a more flexible labour market as skill levels are varied. A singularly different use altogether or a variety of uses which excludes employment could undermine the long term sustainability of the area and Town Centre. As such Policy H1 is not an effective strategy and should be amended to acknowledge the importance of Eldon Way and the need to renew the employment stock to ensure that the site maintains its important role as a employment site, albeit with some ancillary alternative use development where appropriate.

The 2008 Retail Study notes that Hockley Town Centre is not strong and there is trade leakage. Eldon Way Industrial Estate provides a customer base for existing town centre uses. Weekday spending within town centres is an important contributor to the viability of many retail and leisure businesses either through expenditure by employees during the lunchtime trade or expenditure by employers, on necessary goods and services. This relationship helps sustain the critical mass of a centre and provides a platform for new retail and leisure growth. It is important to have a balanced centre with a variety of uses. Policy H1, as currently drafted, implies the removal of employment related development and this is likely to harm the vitality and viability of Hockley Town Centre. The Council has presented no evidence to suggest that this is not the case. Importantly, the 2008 Retail Study explains that there is a need for additional retail and office space. In principle we would support additional office and other B1 type uses plus retail but employment uses should always dominate for the sustainability reasons given above. Retail and office development are likely to present a viable alternative to some of the more industrial type uses.

Consequently, we do not support the phrasing of the third paragraph of Policy H1 and maintain that the most appropriate strategy is to seek renewal of the employment stock with employment based uses and with some new retail development. Removal of employment land uses completely as currently implied-which was the approach adopted in the emerging Hockley Area Action Plan - is not a justifiable strategy.

One of the key tests of a Core Strategy is consistency between policies in the emerging Plan and this strikes at the heart of demonstrating an effective strategy. Policy H1 implies alternative uses to employment and the relocation of Eldon Way to a site identified under Policy ED4. However, Policy RTC6 sets out a suite of policy criteria for Hockley Town Centre which includes employment and commercial activities. In addition Policy ED3 seeks the protection of sustainable employment sites (Eldon Way) and notes that some reallocation of existing employment sites will include a proportion of employment. It notes that in the case of Eldon Way employment development will form a component. The policies appear at odds with one another. The third paragraph of Policy H1 should be deleted as the second paragraph is sufficient to set a strategic context for delivering new housing development. The employment policies and Hockley specific policies should be left to consider the type and quantum of land uses appropriate in the area. If the third paragraph of H1 is to be retained then it should tie in more with Policy RTC6 and in our view explain that employment uses should dominate any redevelopment proposals for the Eldon Way site and that retail and leisure uses should be a supporting proportion.

Implementation, Monitoring and Delivery - page 132 onwards

One of the key tests of soundness is that the Core Strategy should be effective - it should be able to deliver its strategy. The Implementation strategy set out at page 132 onwards of the Core Strategy does not explain how Policy H1, RTC6 and the strategy for redeveloping Eldon Way (Policy ED2 and ED3) will be delivered. The comment at Policy ED3 on

16927 Support

CHAPTER 4 Appendix H1

page 161 identifies it as a potential risk and alludes to land assembly difficulties and the choices to be made by owner/occupiers. In order to deliver the strategy there should be a clear understanding as to whether the new land use values being promoted are sufficient to encourage relocation voluntarily. Secondly there is a need for more information to be gathered and presented to show that current occupiers and landowners are willing to relocate and the timescales likely for this. For example, do the building lease contracts enable early review or are there any break out clauses. There should be some commentary on whether the Council will engage in compulsory purchase orders to pursue their strategy should the 'encouragement' route fail. As currently drafted there is no clear path to deliver the strategy and the danger is that despite reallocation, the sites identified for redevelopment will not come forward in the plan period. In this regard, evidence to satisfy the test of soundness is not provided.

Policy H2 - General Locations

We support the strategy that new housing growth should be targeted at land South of Hawkwell. This area is suitably located to the urban area of Hockley/Hawkwell and to tie in with the settlement tiers on page 40 of the Submission Core Strategy the same terminology for settlement should be used. This ensures a consistency within the SCS. The choice of this location as a housing growth area is appropriate as it would not contribute to the coalescence of the urban area with Ashingdon (there is existing development between this identified housing area at Rectory Road and Ashingdon and moreover, Rectory Road can form a natural physical boundary for the new Green belt boundary. This area is also well located to the existing road network. Cherry Orchard Way has recently been improved and provides much better accessibility to the proposed housing growth area than any other location around Hockley/Hawkwell. The existing bus routes along Rectory Road also make this location sustainable and the additional housing proposed will help underpin the financial viability of bus routes in this area. Locally there are employment opportunities, including the small commercial estate off Main Road. The Eldon Way Industrial Estate adjacent to the Town Centre also provides the opportunity for employment locally. Extensive public open space, play pitches and built leisure facilities are located just to the north of this area and a community hall is located off Briar Close, nearby. The area to the south of Hockley/Hawkwell is close to local shops on the corner of Heycroft Road and Main Road and there are numerous footpath links between this area and the local community including links via Thorpe Road, Thorpe Close, Briar Close, Hawkwell Park and Park Gardens. The area therefore provides the opportunity to enhance existing links, including cycle links, and contribute towards community integration - more so than other sites on the south side of this settlement. The site is also in the control of one house builder and deliverable.

However, we find that the Policy is not fully consistent with national policy and furthermore needs to be reviewed in order to be justified and effective. We have concerns as to how the Green Belt review strategy set out at Policy H3 and in the Local Development Scheme integrates with this policy and feel that Green Belt review should be more explicit throughout the SCS. We note that it is only Policy H3 which indicates the need for Green Belt land review. In fact Policy H3 only pays lip service to the need for a Green Belt review and provides, at best, loose advice in this regard. It says that prior to 2021 Green Belt will be safeguarded save for the releases noted under Policy H2. Policy H3 then goes on to talk about land release for development after 2021 but no time period is set out to provide a framework for any Green Belt review in this latter period. In our view Policy H2 and certainly Policy H3 and Policy GB1 should explain fully the need for a Green Belt review and that such a review should take place for a defined period. That such a review has not taken place in advance of the SCS is a serious matter for the Inspector to consider in the context of soundness. That said, it is considered that any review of Green Belt should have regard to a period beyond 2021 as indicated by draft Policy H3. Paragraph 1.9 of the East of England Plan explains "this RSS covers the period to 2021 but sets a vision, objectives and core strategy for the longer term". 2026 is therefore considered a minimum suitable period that any Green Belt review must have regard to in order to meet the 5 year land supply requirements in PPS3 for the period after 2021. However, Policy SS7 of the East of England Plan talks about Green Belt reviews up to 2031. In view of this and the need to explore the circumstances of Rochford - that existing settlements cannot contain future housing growth; that Green Belt is necessary to provide housing; and that these provide exceptional reasons to vary the Green Belt locally (paragraph 2.6 to 2.7 of PPG2) the policies and strategy for the SCS should identify a Green Belt review covering the period to 2031 and set out why a review is necessary.

Policy H2 - Phasing and Quantum

The 2008 Preferred Core Strategy document indicated that the area south of Hawkwell should deliver 330 dwellings over a phasing period to post 2021 (see Policy H2 and H3 of that document). The SCS reduces the quantum of housing in this area to 175 but expects delivery by 2015. At a broader level the Preferred Options Core Strategy of 2008, (Policy H2) required 1,450 dwellings to 2015 and a further 1,050 by 2021. In the SCS the figures are now 775 and 1,010 respectively.

Since the SHLAA post dates the publication of the SCS, we are uncertain as to the reason why such a significant reduction in quantum of housing and extensions to the residential envelope is considered necessary. Presumably it is the 'new' strategy to redevelop existing employment areas within the settlements that has led to this change. Our representations on this strategy and specifically the Eldon Way Industrial Estate are included elsewhere within our representations. Previously we have commented on the Table at paragraph 4.6 of the Submission Core Strategy and the lack of evidence to underpin that table. It seems odd that in the space of a year the expected requirement for Greenfield sites has effectively halved on the basis of a SHLAA exercise. The community is therefore not able to effectively

16927 Support

CHAPTER 4 Appendix H1

comment on the housing land supply and at this stage the Submission Core Strategy is legally unsound.

That said, we are of the view that the quantum of housing envisaged south of Hockley/Hawkwell should be more than the 175 currently envisage. In coming to this view we have reviewed the Urban Capacity Study and the latest housing figures in the Annual Monitoring Report 2008. We conclude that the shortfall in housing land supply is such that 330 dwellings in this location is appropriate.

The recently published SHLAA is based upon the data obtained from the Urban Capacity Study 2007, a call for sites exercise and data from the Annual Monitoring Report 2008.

The 2007 Urban Capacity Study (UCS)

1. 2007 is widely recognised as being the peak level of house prices in the UK and it was acknowledged by Government and practitioners alike that 2007 house prices were at an unsustainable level. It is our view that utilising the 2007 UCS as an evidence base without reference to the market does not pick up the depressed demand that is likely to now exist. Recent corrections to the housing market now mean that housing land prices are at a much lower and arguably more affordable level than before. The implications are that some pdl may not be viable for housing development. Often brownfield sites have much higher development costs than Greenfield sites and so the yield from urban capacity will be much lower than anticipated in the 2007 study. One example is the employment allocation of the Adopted Local Plan located at 76-92 Main Road, Hawkwell. This site has been allocated for several years and has been available during the most recent rises in residential property prices during 2006-07. As a consequence the lack of progress on the site can only be described by its current occupancy and perhaps it comprises high value uses that do not encourage redevelopment. Despite this the site is identified as having high potential for alternative use and high potential demand. The SHLAA form notes that there is no information on legal constraints (e.g., tenancy agreements) As a consequence it is difficult to see how this could continue to be a potential site and as a consequence the allowance for green field releases should be increased.

2. There are considered to be other instances in the UCS and the recently published SHLAA where the assumptions and calculations would indicate that the 1301 urban capacity figure is over optimistic and the SHLAA assessment is limited. In the assessment of 'non-residential sites in appropriate locations' within the UCS assumptions are made as to the probability of sites coming forward for new housing. 68-72 West Street, Rochford is identified as a high probability site but we note that it has been subject to 7 refusals of planning permission/conservation consent. There is a significant gap between the urban capacity identified as being suitable by the Council and the capacity applied for by the owners. Given its alternate use value, it is debateable whether the two capacity figures can be reconciled. No 247 London Road is another example of a site allocated in the Local Plan but which hasn't come forward. This is now the subject of a proposal for a care home and if approved would further limit the scope for market/affordable housing capacity on the site. A striking example of how the urban capacity study has underestimated is also evidence by 2-4 Alderman's Hill, Hockley - described as a disused service station. There has been no residential development application on this site since 2004 and most recent applications have sought commercial use of the site. Rather than being evidence of housing land deliverability, this particular site evidences the need for commercial uses in the area. There are therefore deliverability doubts over these 'high probability' categories which amount to some 40 units.

3. In relation to the assessment in the UCS entitled 'intensification of existing residential uses' we note that the assessment is premised on an assessment of recent trends taking into account net completions between 2001-2006 and 2005-06. This is effectively an assessment of windfall trends and not an approach that PPS3 encourages. Importantly Table 3-12 in the urban capacity study seeks to project forward urban capacity from residential redevelopment - a period that benefited from high house prices and PPG3 guidance encouraging redevelopment. These two circumstances have markedly changed and so the assumptions and conclusions drawn would also have changed. Even taking into account the UCS discounting, the reliability of the 404 units from this source must be questioned and in our view the 1301 figure cannot be a sound basis for urban capacity and further Greenfield releases are necessary.

4. In the section of the UCS entitled 'subdivision of dwellings' and 'living above the shop' it is estimated that recent trends would result in 7 and 15 units. Our concerns with using trends as a basis for urban capacity are detailed above - PPS3 does not encourage this. Rather, local authorities are charged with surveying their areas, identifying which areas may yield urban capacity and how much and developing policies to achieve that. Government guidance does not encourage the estimation of windfalls in the way the UCS does.

5. Redevelopment of established employment land is a separate section within the UCS. At 1 above we identify the low probability of the Main Road residential allocation coming forward. This remaining section of the UCS considers 11 further employment sites which were first identified in the 2000 UCS. Three of these are considered to have a high probability of coming forward. We have looked at these three sites and can find no evidence that they are likely to come forward. In the 8 years between 2000 and 2008 the three identified high probability employment sites have not been developed and there is no reason to assume that the next 5-10 years will be any different. For example the Rawreth Industrial Estate is identified as being well used in the UCS and although it has some unneighbourly uses there is no indication that the site is available, suitable or deliverable for residential. Land between 39-69 Lower Lambricks, Rayleigh is identified as having a high probability of residential uses. Yet there is no

16927 Support

CHAPTER 4 Appendix H1

evidence of any pre-application advice or planning applications for this area. Stambridge Mills, Mill Lane, Stambridge is a further example. This site is separated from the urban area, in a flood risk zone and protected in the 2006 Replacement Local Plan by Policy EB9 which promotes B1 uses. Against this background there is only two relevant planning applications affecting this area both date from the early 1990's and relate to a plant room and loading bay. There is no evidence that this is likely to come forward for residential purposes in the next 5-10 years.

6. In the UCS extant permissions are identified as 856 dwellings. It is important to note that this figure needs to be continually reassessed so that from the point of adoption of the Core Strategy a 5 and 10 year housing land supply is available. The SHLAA notes extant permissions for 2009-14 being 106. As noted below extant permissions do not necessarily translate into deliverable sites. There is therefore a contingency that needs to be built in. Further allocations on greenfield land need to be increased and as such the quantum of housing in the area south of Hockley/Hawkwell should be increased to 330 dwellings in order to begin to meet the shortfall identified.

The District Council's 5 year housing supply assessment

7. The District Council's Annual Monitoring Report ("AMR") 2008 purports to demonstrate a 5 year housing land supply. The preamble to Table 4.10 in the AMR 2008 explains that Rochford District Council ("RDC") has included units under construction, units with full permission, units with outline permission, units with a resolution to grant, units subject to preapplication discussion/Urban Capacity Assessment and land allocations in its trajectory. The reader is referred to Appendix B which breaks down the sites in more detail. The recently published SHLAA also includes a table showing a potential 1273 dwellings deliverable. However, it refers to "appropriate brownfield sites." Since these 'appropriate sites' are do not benefit from an application or a planning permission it is difficult to programme them into the housing delivery trajectory.

8. In the full planning permission category of the AMR 2008 where work has not yet started there can be no guarantee that all these sites will be delivered in the 5 years. This comment relates to the one above in relation to the recently published SHLAA. It is not uncommon for permissions to be obtained to provide a means for valuing a site where the owner has no immediate plans to sell the site or develop housing. Delivery may also be hampered by funding constraints, or site assembly problems (where sites are in an alternative use or relocation constraints). Appendix B of the AMR 2008 does not set out the intentions of the landowner or whether the sites are truly achievable in the 5 year period as per PPS3 requirements. The SHLAA purports to show developer intentions at Appendix C but the assessment by the local authority into the legitimacy of some of the claims is not presented. The evidence base is not as full as it should be to demonstrate the robustness of Table 4.6 of the SCS. It is also unclear the extent to which this table is based on either the UCS 2007, AMR 2008, SHLAA 2009 or a combination of all three. This should be set out clearly.

9. In addition, to the 'non delivery' of a proportion of new homes in the AMR 2008, there is concern at the timings of delivery in that data set, for example, 10 units in 2008-2009 relates to outline planning permissions and it is doubtful whether reserved matters can be turned round quick enough to begin delivering housing in this year period. There could well be examples in that set of data where the delivery of units in the first year of the 5 is unlikely, thus delivery is reduced for that period and pushed back and this process is then compounded throughout the data set up to and beyond year 5. Statistical evidence from the Department of Communities and Local Government ("CLG") reveals that building starts are 43% down on the quarter to March 2009 compared with March 2008. It is not clear whether the recently published SHLAA has taken this into account and unless it does the data in the Table at 4.6 of the SCS cannot be relied upon, particularly given the current recessionary circumstances. In relation to the Table at Paragraph 4.6 a refinement is therefore needed to take into account this effect on phasing.

10. This problem is compounded for other units relied upon where permission has been granted but no start on site has been made; this accounts for a considerable number of sites in 2009-10 period (100 dwellings) which is (year 2 of the 5 year period). A delay in these will require more Greenfield sites to be identified in order to meet the shortfall.

11. Finally we note that the East of England Plan expresses its land supply requirement as a minimum. This strategy is not reflected in the

16927 Support

CHAPTER 4 Appendix H1

Submission version of the Core Strategy policy H2.

12. In summary since neither the UCS nor the Annual Monitoring Report form a SHLAA, reservations are maintained about the degree to which sufficient housing land has been identified.

Policy H3

In the Preferred Options Core Strategy 2008 more locations were identified for housing growth in the post 2021 phase. Whilst it is our view that land south of Hockley/Hawkwell should benefit from a greater number of dwellings than the 175 currently identified (330) in order to make the strategy effective. We are concerned at the significant change in strategy between the Preferred Option Core Strategy and the Submission version, which has significantly less housing growth on green field sites. This change in strategy is so significant that we would question whether it is appropriate in the context of soundness and the consultation processes that have taken place so far.

We also have concerns as to how the Green Belt review strategy set out at Policy H3 and in the Local Development Scheme integrates with other policies in the SCS and feel that Green Belt review should be more explicit throughout the SCS. As it currently stands there is a potential conflict with national policies and limited justification for the Green belt strategy. We note that in Policy H3, which indicates the need for Green Belt land review, the advice is limited and unclear. In fact Policy H3 only pays lip service to the need for a Green Belt review and provides, at best, loose advice in this regard. It says that prior to 2021 Green Belt will be safeguarded save for the releases noted under Policy H2. Policy H3 then goes on to talk about land release for development after 2021 but no time period is set out to provide a framework for any Green Belt review in this latter period. In our view Policy H3 and Policy GB1/H2 should explain fully the need for a Green Belt review and that such a review should take place for a defined period. That such a review has not taken place in advance of the SCS is a serious matter for the Inspector to consider in the context of soundness. That said, it is considered that any review of Green Belt should have regard to a period beyond 2021 as indicated by draft Policy H3. Paragraph 1.9 of the East of England Plan explains "this RSS covers the period to 2021 but sets a vision, objectives and core strategy for the longer term". 2026 is therefore considered a minimum suitable period that any Green Belt review must have regard to in order to meet the 5 year land supply requirements in PPS3 for the period after 2021. However, Policy SS7 of the East of England Plan talks about Green Belt reviews up to 2031. In view of this and the need to explore the circumstances of Rochford - that existing settlements cannot contain future housing growth; that Green Belt is necessary to provide housing; and that these provide exceptional reasons to vary the Green Belt locally (paragraph 2.6 to 2.7 of PPG2) the policies and strategy for the SCS should identify a Green Belt review covering the period to 2031 and set out why a review is necessary. Not to do so is unsound for justification and effectiveness reasons.

Policy H4 - Affordable Housing

As currently drafted we feel that the policy is not concise enough and that the policy does not reflect current guidance. The phrase 'at least' would indicate that in most cases affordable housing above 35% will be sought. Our understanding is that the 35% figure is recommended in the SHMA and that to provide a policy framework which seeks to go beyond that figure would potentially be unworkable as many sites could not financially bare the burden of over a third of the net developable area not yielding a value. The policy should be redrafted so that "a target of 35% affordable housing shall be provided on all developments of 15 or more units..."

The last policy paragraph provides some scope to relax this policy, if there are clear site constraints that make on site provision impossible. The policy, though, is not particularly clear on what would constitute exceptional circumstances. For example, physical site constraints, which unusually raise development costs, would be one such reason and this should be specified. There may be other reasons including the nature of housing needs in the part of the District the site is located which justify affordable housing below the 35% target. Design reasons may also have a bearing on how provision is made and in what form, particularly if the site is in an historic area where design might override housing need argument. It is therefore recommended that the policy expand on the type of circumstances where affordable housing may be relaxed and the type of information that will be sought of applicant's who have a need to invoke this part of the policy.

Policy H5

In support of the policy, it is advantageous that no percentages requiring a specific mix are included. This flexibility will enable developers and the Council to respond directly to changing circumstances in the local housing market. In the past some authorities have set out a percentage for the type of housing they require only to find that after a few years of strict implementation there is an oversupply of property of that type and no flexibility in the policy to address the problem.

Policy ED2 - London Southend Airport

It is considered that to grow non aviation related employment at a location north of Southend Airport where sustainable access from the rest of Rochford District requires careful consideration. Most Airports are serviced by aviation related employment development and as such a location close to the airport is sensible and sustainable. However, for surface access reasons it would be inappropriate to encourage travel from Rochford's main settlements to what essentially

16927 Support

CHAPTER 4 Appendix H1

would be a rural location for general employment uses. Whilst sustainable access would be improved by a railway station and better bus links, there is no evidence to suggest that a sustainable surface access strategy for non related employment development at the Airport can be achieved. Paragraph 11.22 explains the critical importance of a railway station to the delivery of the strategy yet the Transport Chapter and Implementation Chapter provide neither a policy nor an assessment of deliverability. It is also notable that the South Essex Rapid Transit Policy T4, as set out at paragraph 10.16, notes that Rochford is not proposed to be served but may be served in future phases. This uncertainty is no way to plan for a major employment land supply strategy in the District. In relation to PPS12, the ability to deliver sustainable green field employment sites away from the top tier settlements of Hockley/Hawkwell, Rochford and Rayleigh is unsound.

Policy ED3

We fully support the first sentence of the Policy and note the apparent contradiction with the statements in Policy H1 and elsewhere which seeks to develop on alternative uses at industrial estates such as Eldon Way.

This contradiction is evidence in the second paragraph of Policy ED3. In our representations on Policy H1 we have explained why it is not sound to diminish the employment stock at Eldon Way and the importance of maintaining a dominance of employment type uses at this estate. These arguments are not repeated here.

We note the sentiments of the third paragraph and in accordance with our representations elsewhere are of the view that this sentence should be revised to explain that Eldon Way will accommodate principally employment type uses. As noted elsewhere uses which are an alternative to employment would diminish this highly sustainable employment site and this is unsound when assessed against National Policy.

Policy ED4 - Future Employment Allocations

In part, the de-allocation strategy is not supported as it is considered unsound when set against sustainability criteria. In relation to the Eldon Way Industrial Estate it is considered critical to the ongoing sustainability of this settlement that employment uses are maintained at this location. It is close to the railway station, bus routes and local residential areas from which the opportunity exists for employees to walk or cycle to work. Its location adjacent to the Town Centre offers opportunity for some retail and leisure development to complement the centre and to maintain a supporting function. These sustainable benefits would not occur with the deallocation of Eldon Way or the significant erosion of its employment floorspace. Whilst redevelopment of the employment site to achieve new employment is supported, the dominant land use should continue to be employment use. As a consequence, the 18ha of land required for employment in this policy is considered to be excessive and the policy should be reviewed to explain that redevelopment of existing employment sites for primarily new employment development will be encouraged.

Policy T4

It is noted that the South Essex Rapid Transit policy, as elaborated upon at paragraph 10.16 notes that Rochford is not served but may be served in future phases. This uncertainty is contrary to the delivery principles of soundness and directly puts at issue the employment land supply strategy in the District which is founded on sustainable access to new sites. In relation to PPS12, the ability to deliver sustainable green field employment sites away from the top tier settlements of Hockley, Rochford and Rayleigh is unsound.

Appendix H1, CTL1 - Infrastructure

It is recognised that necessary infrastructure provision is an important part of creating a sustainable development and in that context appendix H1 is supported. The supporting text notes that the table at Appendix H1 is not exhaustive and in that context it is very important that the framework properly distinguishes between what should be provided as part of new development schemes and what shouldn't. It is therefore essential that the framework acknowledges the importance of Circular 05/05 and the tests which say that provision of infrastructure and/or contributions should be:

- * Relevant to planning
- * Necessary to make the proposed development acceptable in planning terms
- * Directly related to the proposed development
- * Fairly and reasonably related in scale and kind to the proposed development
- * Reasonable in all other respects

As is made clear (Paragraph B9 of Circular 5/05) contributions should not be used to make good existing deficiencies in infrastructure provision. Nor are they to be used to secure contributions to the achievement of wider planning objectives that are not necessary for consent to be granted. In that context the Core Strategy should set this out as its policy framework.

Policy GB1 - Green Belt

16927 Support

CHAPTER 4 Appendix H1

The objectives of this policy are supported, although as noted in other representations the SCS is unsound as it does not meet the tests in relation to justification, compliance with national policy or effectiveness of strategy.

Policy GB1 mentions the objective to allocate the minimum amount of Green Belt land necessary. The policy should link to the requirements of PPG2 and RSS which are discussed in relation to the representations on Policy H2 and H3. The policy should set out a timeframe for the review and why Rochford requires a Green Belt review (what the exceptional circumstances are in this District that justify a review of local boundaries. The policy should be amended to set out a 2031 time frame and this may require the SCS to have an extended life span beyond 2021.

We would recommend the deletion of the word character since Green Belt designation is not related to landscape character as currently drafted. For clarity we would also recommend that the Policy or its supporting text explain that a Green Belt review will take place in support of an allocations document (paragraph 6.6) in order to identify an appropriate new boundary. This is particularly necessary given the commitment to a Green belt review in the adopted Local Development Scheme.

Policy CLT1 - Planning Obligations and Standard Charges

In view of the need to test fully the basis on which standard charges are based it is important that any document produced is in a development plan document that enables an examination in public. The policy should explain this in order that when the document is produced it accords with Policy and is based on sound evidence.

ENV9 - Code for Sustainable Homes

Object. The advice from the Department of Communities and Local Government is that the new requirement to have a rating against the Code does not make it mandatory to build a Code home or to have each new home assessed against the Code. It does however mean that all buyers of new homes be given clear information about the sustainability of the new home. A house builder can do this in one of two ways:

- they can choose to build a Code home, have that home assessed against the Code and provide the home buyer with a Code certificate stating the star rating the home has achieved
- or, they can choose to build to current building regulations standards, not to pay for an assessment and instead download a nil-rated certificate of non-assessment (also referred to as a nil-rating) to provide to the home buyer.

As such the Rochford policy requirement that coding 3 be achieved by 2010 and Code 6 by 2013 is out of step with Government advice. The policy wording should explain that it is just the coding that is a requirement of new homes and not necessarily that new homes should be constructed to achieve a standard.

The current Government objectives are for the code to be introduced over a reasonable period with development to be code 3 by 2010, code level 4 by 2013 and code level 5 by 2016. In this regard the policy, as drafted, seeks to achieve code 6 by 2013 and consequently compresses the code requirements into a shorter time scale with the costs associated expected to be subsumed within the housing market through higher prices. This is not a realistic strategy for the delivery of sustainable homes and we consider that the policy should be revised to extend the period of compliance but to also make it more flexible based on local circumstances.

Research undertaken on behalf of the Housing Corporation and English Partnerships, published in February 2007 'A cost review of the code for sustainable homes' reveals that code 6 is unlikely to be unattainable given existing technologies and that achieving code 5 could result in a 12% to 20% increase in costs that would have to be passed onto the consumer. Given the variability of the housing market with peaks and troughs, it is unlikely that the housing market would be able to subsume this level of price increase.

The code system policy as currently drafted does not have regard to site circumstances and so many of the requirements could be difficult to meet. For example, micro electricity generation on site may be difficult to achieve where local circumstances deter the capture of wind or solar power. If more expensive technologies are required to generate power than is the norm then costs will rise. There may be other competing reasons why designs cannot include certain sustainability measures if housing sites are in sensitive landscape and historic locations. Alternatively there may be significant development costs associated with site specific circumstances and so viability of the site's development becomes a valid consideration. By insisting on the code for sustainable homes other policy objectives such as affordable housing at particular rates and other contributions may need to be reconsidered. Consequently, we are of the view that this policy should be drafted in a manner which enables site specific circumstances to be taken into account. As noted above the Government explains that the code is a certification requirement and does not necessarily mean that buildings are constructed in accordance with a code level.

It is also important to note that it is not the purpose of planning legislation to duplicate other legislation. In this regard, the policy should accept that the Building Regulations will be the main vehicle for implementing this policy and that unless the coding requires external development then there will be no need to specify what is to be carried out in a planning application.

CHAPTER 4 Appendix H1

Summary: Appendix H1, CTL1 - Infrastructure

It is recognised that necessary infrastructure provision is an important part of creating a sustainable development and in that context appendix H1 is supported. The supporting text notes that the table at Appendix H1 is not exhaustive and in that context it is very important that the framework properly distinguishes between what should be provided as part of new development schemes and what shouldn't. It is therefore essential that the framework acknowledges the importance of Circular 05/05 and the tests which say that provision of infrastructure and/or contributions should be:

- * Relevant to planning
- * Necessary to make the proposed development acceptable in planning terms
- * Directly related to the proposed development
- * Fairly and reasonably related in scale and kind to the proposed development
- * Reasonable in all other respects

As is made clear (Paragraph B9 of Circular 5/05) contributions should not be used to make good existing deficiencies in infrastructure provision. Nor are they to be used to secure contributions to the achievement of wider planning objectives that are not necessary for consent to be granted. In that context the Core Strategy should set this out as its policy framework.

SP1 3EY

Agent: N/A

Full Text: The housing trajectory includes provision for sites identified in the SHLAA to come forward in 2010, 2011, 2012 & 2014/15. Approximately 50% of dwellings to be delivered from this source, comprise existing employment sites that have been identified for redevelopment. On closer examination of these sites, which are the subject of separate representations to Policy ED3, they would not appear to be entirely deliverable. Their inclusion in the housing trajectory has not been founded on a robust or credible evidence base, and is therefore unjustified.

Summary: The housing trajectory includes provision for sites identified in the SHLAA to come forward in 2010, 2011, 2012 & 2014/15. Approximately 50% of dwellings to be delivered from this source, comprise existing employment sites that have been identified for redevelopment. On closer examination of these sites, which are the subject of separate representations to Policy ED3, they would not appear to be entirely deliverable. Their inclusion in the housing trajectory has not been founded on a robust or credible evidence base, and is therefore unjustified.

Change to Plan The proposed supply of housing land derived from the SHLAA 2009 is flawed by virtue of the inclusion of existing employment sites that are undeliverable during the time period proposed. On this basis, the DPD fails the test of soundness. In order to make the DPD sound, sites which are 'available' need to be included in the housing trajectory to replace this source; this is likely to require an earlier Green Belt release. Additional sites within the Green Belt in sustainable locations for housing need to be identified

Full Text:

The trajectory is unsound for the following reasons

- the submission version of the Core Strategy has been published in advance of the SHLAA
 - it does not set out a trajectory for at least fifteen years from the date of the adoption of the Core Strategy
 - it assumes that all extant permissions will be completed by 2010
 - it is unclear whether the trajectory assumes the full residential redevelopment of all the employment sites listed in Policy ED3.
- Policy ED3 notes that these employment areas can be redeveloped for "appropriate alternative uses", which "may include a proportion of employment uses". The permissive nature of this policy may mean that these sites are not redeveloped for residential uses. Indeed, in the current recession, the owners of some of these sites may prefer a continued and consistent income from an employment use to a residential land value which is depressed by the recession, the level of proposed S106 costs and affordable housing
- there is no evidence that the employment sites will start to produce dwelling completions in 2010. These employment sites generally have delivery constraints in terms of multiple leases, potential contamination and issues relating to the relocation of displaced employment occupiers. For these reasons, the trajectory is over optimistic in assuming that the first completions will occur in 2010 and applies a spurious level of precision in specifying annual completion rates thereafter
 - the SHLAA site summary is over optimistic in terms of its assessment of the availability of previously developed sites within the urban areas.

Taken together, these comments mean that the trajectory does not comply with national guidance and, as a consequence, it fails to be either effective, justified or consistent with national policy.

The trajectory needs to be recast

- extending its period to at least 2025
- inserting more realistic completion rates for extant permissions, the former employment sites and the number of appropriate sites identified in the SHLAA.

It is considered that our participation at the oral part of the public examination would assist the Inspector for two main reasons

- Sellwood Planning has a detailed knowledge of the Rochford area, appeared at the last Local Plan Inquiry and was a participant at the RSS public examination. This direct knowledge of the local area and the statutory Development Plan may be of assistance to the Inspector
- Sellwood Planning has experience in promoting major schemes through Core Strategies (eg. 7,000 dwellings in Ashford, 5,750 dwellings in Dover, 2,500 dwellings in Horsham and 1,200 dwellings in Newmarket) and the emerging body of evidence of what constitutes a sound Core Strategy and what is unsound. Our experience indicates that, in a number of respects, the submitted Core Strategy is unsound in its present form.

Summary:

The trajectory is unsound for the following reasons

- the submission version of the Core Strategy has been published in advance of the SHLAA
 - it does not set out a trajectory for at least fifteen years from the date of the adoption of the Core Strategy
 - it assumes that all extant permissions will be completed by 2010

Respondent: Ms G Yeadell [7834]

6 Southend Road
Hockley
Essex
SS5 4QQ
01702 205450

Agent: N/A

Full Text: Para 4.8 States sustainability underlines any decisions on housing location, primarily: current and future deliverability of infrastructure, eg roads, services, public transport, health.

Policy H1

Para.4.14 Some employment sites are considered more suitable for other uses (eg housing) including Eldon Way/Foundry, Hockley. This is all open to question.

Hockley-re Eldon Way/Foundry

In CS Preferred Options 2008 policy H2 you discarded N.E.Hockley as a housing option - whilst close to centre, station, "impact on highway network from traffic heading through Hockley..along Ashingdon Road..renders location unviable". Clearly the same principle applied to Eldon Way/Foundry for the same reasons.

Response to C.S Preferred Options 2008 and HAAP 2009

June 2009 issue C S Submission issue says Eldon Way will be used for housing, whereas Sept.2009 issue says "alternative uses, including residential.." to be decided by HAAP (Issues consultation done, Pref.Options issue awaited, but judging from JAAP Pref.Options decision - namely biggest option chosen against overriding opposition, it will be housing).

Need to be logical and even-handed in proposals

Health services GP surgeries are full and a PCT health centre will not occur in the foreseeable economic climate.

Ch.10: Highways and Transport

Policy T1, T2 RDC proposes working with ECC Highways, developers, but admits it has no authority, responsibility here. RDC will seek developer contributions, but this is neither detailed nor costed in CS Submission nor HAAP, and contravenes PPS 12.3 para.4.93 which states "The infrastructure planning process should identify as far as possible infrastructure needs and costs". Idea of paying for road & transport improvements through Standard Charges is unproven and unsound.

Establish likely level of Standard Charges. Accept you cannot turn district into motorways with wholesale demolition.

In neither CS Submission nor HAAP is there any highways improvement, except idea to replace Spa roundabout with traffic lights and 1 way system up Southend Road and Hockley Rise.

Para.10.5 "..highway improvements serving new developments..in a timely manner..ensuring developments delivered alongside necessary infrastructure".

These improvements cannot possibly be delivered. It should be realised: B1013 (Southend Rd), Rectory Road Hawkwell, Ashingdon, West Rochford - all in area proposed for large new developments are former winding, narrow country roads, tarmacked over for motorised traffic. Large housing increments are unsustainable off these roads, which cannot be altered without much destruction.

Reply to CS Pref. Options 2008 & HAAP Issues/Options 2009

Policy T3, CLT1 Appendix CLT1 Public transport RDC admits this is in the private sector. In Hockley, operator has cut No7 service to 1 per hour from Ashingdon Schools, claiming it is unviable beyond. This is unlikely to change as Hockley is car dependant. No8 bus through Hawkwell is cut to 1 per hour to Rayleigh, for same reason as No7. Proposed planning agreements with developers can't run: eg, a community centre or classroom given by a developer remains once he has moved on - how can that apply for an on-going bus service?

Reply to Infrastructure Transport in CS Pref. Opts. 2008 and to HAAP Issues Opts. 2009.

Ch.11 Economic development

Policy ED3 Core Strategy preferred Options 2008 hinted at possible housing in Eldon Way site. June 2009 Submission version, without consultation, said Eldon Way would be housing (map included Foundry, not the text). September 2009 Submission said redevelopment would be in HAAP (which apart from the Issues/Options version, is unfinished. Judging from results of JAAP Preferred Options where biggest option is chosen, though most respondents were against it, site will be housing, without consultation.

16723 Object

CHAPTER 5 Design, 5.4

Para.1.25, Para.11.32 Note CH.1 Introduction to CS Submission 2009 para.1.25 East England Plan requires 3000 additional jobs, presumably to 2021. Revised Southend Airport is expected to drive Economic development. But at para. 11.32 Eldon Way-Foundry estate is planned to be more suitably utilized. "...alternative land will be required to accommodated employment uses so displaced" - ie jobs sent to eg new site near Southend Airport - not new jobs.

Reply to HAAP Issues Options 2009

Remove compulsory relocation

Policy ED4 Policy states Council will allocate 18ha of land to make up for de-allocations in ED3 - that proves point above.

Proposals for moving employment to out of town locations with no existing transport links are contrary to government policies PPG4, PPS1 and PPS4 and Core Strategy Policy T1.

Evidence Base is ignored by contravening Hockley Parish Plan 2007 and ignoring residents' views on HAAP Issues/Options. Next stage of HAAP Preferred Options is pre-empted and rendered irrelevant. Core Strategy plans to relocate Eldon Way Foundry estate to Greenfield site with no nearby bus or railway. RDC plans to upgrade the nearest road to dual carriageway, though the connecting B1013 (through Hockley) will stay single, said by ECC Highways statistics to be 72% capacity. Airport bosses and council cannot suggest there will be no traffic growth from JAAP and new industrial site.

Reply to Hockley Parish Plan 2007. HAAP Issues 2009

Move to new industrial site near airport contravenes PPS4:

- EC7.3C "out of centre sites, with preference given to sites...well served by choice of...transport and...close to centre and...high likelihood of forming links with centre". There is no current public transport and links with centres is unlikely".

- EC 7.5.1 "whether the site is or will be accessible and well served by choice of transport, public transport, walking and cycling, as well as by car...". Remote location, narrow busy B1013 makes the site unsuitable for access by cycle or on foot.

It also contravenes PPS1 (27vii)... "reduce need to travel, encourage accessible public transport provision to secure more sustainable patterns of transport...Planning should actively manage patterns of urban growth to make fullest use of public transport and focus development in existing centres, near to major public transport interchanges". Core Strategy undermines its own policy Transport and Highways policy T1 and is unsound.

Although shown on accompanying drawing in earlier versions, there was no prior textual mention of Foundry industrial estate (next to Eldon Way) for redevelopment until current CS 2009 Submission. This was stated to be a typing error, but does not inspire confidence in reliability of drafting.

Revise both 2009 Core Strategy and 2009 HAAP Issues/options

Chapter 12: Retail/Town centres

The Core Strategy misrepresents findings of the Retail and Leisure Study 2008.

Para.12.38 The Core Strategy states (para.12.38) "The Retail & Leisure Study indicates Hockley has great potential. Hockley has been identified as having a need for additional convenience floorspace."

Whereas the R&LS actually states:

1) (10.26) "the scale of need does not lend itself to a foodstore capable of retaining a significant proportion of main food shopping expenditure".

2) (10.28) "There is no immediate capacity for additional floorspace".

3) (10.29) "we recommend focus be maintained on developing Hockley's existing strengths, rather than retail expansion"

4) 10.31 "the current nature of Hockley does not lend itself to classification as a 'town centre' as defined by PPS6. Moreover, we have identified that it has a very small catchment population. Accordingly, the council may wish to consider reclassifying Hockley from a town centre to a district centre".

Defer whole of proposals for Hockley town centre to Hockley Area Action Plan.

The Council will work with landowners and its partners to deliver the HAAP.

Remove threat of compulsory purchase orders.

16723 Object

CHAPTER 5 Design, 5.4

One doesn't perceive impartiality when the Planning Director replies to local HAAP survey with "The affluent people of Hockley are entitled to famous name shops".

Chapter 5: Character of Place and Local Lists

Para.5.4 "Rochford district has unique character..stems from traditional buildings..still dominate towns and villages".

Para.5.17 "Council believes many buildings..are of local distinctiveness..part of..cherished local scene".

This only applies to favoured places: Rochford, Rayleigh, greenbelt villages. Many Hockley conservable items have been systemically removed for supposedly lucrative development in face of widespread protect. This is for supposed need for housing. In fact heritage items have been replaced by dwellings most cannot afford, and/or are hard to sell due to unsuitability of massing and siting. Many other homes are jeopardised by this practice.

HAAP issues 2009. Core Strategy 2006, 2007,2008, SCI.2006

Fewer 'vested interests', more even handedness. No more pressing people out of businesses, homes for expediency.

A CPRE Fieldwork issue extolled Local Lists, citing refusal of 16 flats to replace character house, not on local list. Inspector said house, facade made a contribution to area character, even if English heritage decided it didn't warrant listing. Council worked to get the house grade listed and even made adjacent area conservation one.

Hockley had one such on a "significant site" faced with 13 flats. Ward Member omitted house from refusal proposal, so house could be demolished. RDC dropped Local List ahead of appeal: "Government frowned on such Lists" (Other LAs, unaware of supposed directive retained theirs. After demolition RDC restored Local Lists, saying Government now support them. When Inspector queried the complaint, the then policy officer said "just politics, lot of local interest, nothing of character in the area[!]. (A dozen such items had been removed). Some "distinctive" Hockley buildings are still condemned (in Greensward Lane.; others threatened (Spa Road). Whereas a modest hue and cry in Rayleigh will usually result in a building being saved.

Conclusion

Core Strategy Submission DPD is basically unsound in many respects

Incomplete information. Amongst others, it refers to Hockley AAP, the first stage of which is complete, but not other three. Rochford AAP first stage has been published in arrears of Core Strategy Submission. Rayleigh AAP is still awaited. Precise housing sites are absent, as Urban Capacity Study 2007 has been superseded by Strategic Housing Land Availability Assessment, not yet published. Traders, residents, are thus responding to Core Strategy Submission with incomplete information.

Lack of community involvement. Chapter 1, Introduction, para. 1.11 "Community involvement is an essential part of the plan making process".

In Statement of Community Involvement 2006 Rochford RDC "recognises need to enable people to have their voices heard".

Re Public Meetings: "Consideration will be had to timing and venue to ensure meeting is as accessible as possible".

Take Hockley Area Action Plan as an example of the opposite of all this:- Presentation of document was at Hullbridge, 7.30pm. It was also discussed with JAAP at Rochford Freight House (for traders only) at 7am, without publicity. Excuse made: HAAP on RDC website, which none will seek unless knowing it is there. Rochford District Matters newsheet had minute articles on p.3, half way through consultation period. Another excuse: a 2nd presentation by Hockley Residents Association with planning officer present: only because of complaints, and it is not the HRA's responsibility to RDC's job. Due to unavoidable haste of calling meeting, few knew and only 50 were present.

In Core Strategy Submission Hockley Parish Plan has been ignored. Proposals also ignore 95% rejection rate response to HAAP 2009, which included proposals for Eldon Way employment site.

Unfettered right of developers to carry on as if Core Strategy didn't exist. In PPS 12, Ch.4.6 states: "Core Strategies should be flexible and able to show how they handle contingencies". Several large planning applications have been submitted proposing developments outside the Core Strategy which does not indicate how such applications will be handled and does not comply with PPS 12.

Where are we? Finally, at Chapter 1, Introduction, para. 1.24: "the Core Strategy will have to be reviewed in the event of a new Local Area Agreement, post-2011, setting different priorities". So what purpose does all this work serve? So we have hardly finished this exercise, before it all starts again?

Full Text: Ch. 4 Housing; Ch.10 Transport, Highways; Ch.11 Economic Development; Ch.12 Retail/town centres; Ch.5 Character of place & Local Lists

Chapter 4: Housing

Para 4.8 States sustainability underlines any decisions on housing location, primarily: current and future deliverability of infrastructure, eg roads, services, public transport, health.

Policy H1, Para.4.14 Some employment sites are considered more suitable for other uses (eg housing) including Eldon Way/Foundry, Hockley. This is all open to question.

Hockley-re Eldon Way/Foundry

In CS Preferred Options 2008 policy H2

N.E.Hockley was discarded as a housing option - whilst close to centre, station, "impact on highway network from traffic heading through Hockley...along Ashingdon Road..renders location unviable". Clearly the same principle applied to Eldon Way/Foundry for the same reasons.

Need to be logical and even-handed in proposals

June 2009 issue C S Submission issue says Eldon Way will be used for housing, whereas Sept.2009 issue says "alternative uses, including residential.." to be decided by HAAP (Issues consultation done, Pref.Options issue awaited, but judging from JAAP Pref.Options decision - namely biggest option chosen against overriding opposition, it will be housing).

Policy H1, T1 Proposals for moving employment to out of town locations, at either end of the district, with no existing public transport links, are contrary to government policy PPG14 & PPS1. it also contravenes the Core Strategy's stated aims of reducing carbon emissions; reliance on car transport and providing "an integrated network of cycle paths",

The Core Strategy also contravenes its own policy T1 and is unsound.

Health services GP surgeries are full and a PCT health centre will not occur in the foreseeable economic climate.

Ch.10: Highways and Transport

Policy T1, T2 RDC proposes working with ECC Highways, developers, but admits it has no authority, responsibility here. RDC will seek developer contributions, but this is neither detailed nor costed in CS Submission nor HAAP, and contravenes PPS 12.3 para.4.93 which states "The infrastructure planning process should identify as far as possible infrastructure needs and costs". Idea of paying for road & transport improvements through Standard Charges is unproven and unsound.

Establish like motorways with wholesale demolition.

In neither CS Submission nor HAAP is there any highways improvement, except idea to replace Spa roundabout with traffic lights and 1 way system up Southend Road and Hockley Rise.

RDC are proposing to scatter housing across the district in around 12 or sites but no detailed consideration has been given to the implications for highways across the District. Many roads across the District are at or near capacity but no modelling has been undertaken to determine the impacts.

It is clear that (i) the combined impact of scattering houses across the District and (ii) relocating Eldon Way/Foundry Industrial Estates with no public transport services will exacerbate existing problems. It is clear that the extent of improvements required is both unknown and not funded and the proposal is unsound.

Para.10.5

Policy T3, CLT1 Appendix CLT1

T1 & T2 "...highway improvements serving new developments..in a timely manner..ensuring developments delivered alongside necessary infrastructure".

These improvements cannot possibly be delivered. It should be realised: B1013 (Southend Rd), Rectory Road Hawkwell, Ashingdon, West Rochford - all in area proposed for large new developments are former winding, narrow country roads, tarmacked over for motorised traffic. Large housing increments are unsustainable off these roads, which

16764 Object

CHAPTER 5 Design, 5.4

cannot be altered without much destruction.

Public transport RDC admits this is in the private sector. In Hockley, operator has cut No 7 service to one per hour from Ashingdon Schools, claiming it is unviable beyond. This is unlikely to change as Hockley is car dependant. No 8 bus through Hawkwell is cut to one per hour to Rayleigh, for same reason as No 7. Proposed planning agreements with developers can't run: e.g., a community centre or classroom given by a developer remains once he has moved on - how can that apply for an on-going bus service?

Ch.11 Economic development

Policy ED3 Core Strategy preferred Options 2008 hinted at possible housing in Eldon Way site. June 2009 Submission version, without consultation, said Eldon Way would be housing (map included Foundry, not the text). September 2009 Submission said redevelopment would be in HAAP (which apart from the Issues/Options version, is unfinished. Judging from results of JAAP Preferred Options where biggest option is chosen, though most respondents were against it, site will be housing, without consultation.

Para.1.25 Para.11.32

Policy ED4 T1 & T2 Note CH.1 Introduction to CS Submission 2009 para.1.25 East England Plan requires 3000 additional jobs, presumably to 2021. Revised Southend Airport is expected to drive Economic development. But at para. 11.32 Eldon Way-Foundry estate is planned to be more suitably utilized. "...alternative land will be required to accommodated employment uses so displaced" - ie jobs sent to eg new site near Southend Airport - not new jobs.

Remove compulsory relocation

Policy states Council will allocate 18ha of land to make up for de-allocations in ED3 - that proves point above.

Proposals for moving employment to out of town locations with no existing transport links are contrary to government policies PPG4, PPS1 and PPS4 and Core Strategy Policy T1.

Evidence Base is ignored by contravening Hockley Parish Plan 2007 and ignoring residents' views on HAAP Issues/Options. Next stage of HAAP Preferred Options is pre-empted and rendered irrelevant.

Core Strategy plans to relocate Eldon Way Foundry estate to Greenfield site with no nearby bus or railway. RDC plans to upgrade the nearest road to dual carriageway, though the connecting B1013 (through Hockley) will stay single, said by ECC Highways statistics to be 72% capacity. Airport bosses and council cannot suggest there will be no traffic growth from JAAP and new industrial site.

Revise both 2009 Core Strategy and 2009 HAAP Issues/options

Move to new industrial site near airport contravenes PPS4:

EC7.3C "out of centre sites, with preference given to sites..well served by choice of..transport and..close to centre and..high likelihood of forming links with centre". There is no current public transport and links with centres is unlikely".

EC 7.5.1 "whether the site is or will be accessible and well served by choice of transport, public transport, walking and cycling, as well as by car..". Remote location, narrow busy B1013 makes the site unsuitable for access by cycle or on foot.

It also contravenes PPS1 (27vii).. "reduce need to travel, encourage accessible public transport provision to secure more sustainable patterns of transport..Planning should actively manage patterns of urban growth to make fullest use of public transport and focus development in existing centres, near to major public transport interchanges". Core Strategy undermines its own policy Transport and Highways policy T1 and is unsound.

H1 & RTC6 Although shown on accompanying drawing in earlier versions, there was no prior textual mention of Foundry industrial estate (next to Eldon Way) for redevelopment until current CS 2009 Submission. In recent amendment to the CS this was stated to be due to a typing error!

Chapter 12: Retail/Town centres

The Core Strategy misrepresents findings of the Retail and Leisure Study 2008.

Defer whole of proposals for Hockley town centre to Hockley Area Action Plan.

Para.12.38 H1 & RTC6 The Core Strategy states (para.12.38) "The Retail & Leisure Study indicates Hockley has great potential. Hockley has been identified as having a need for additional convenience floorspace."

Whereas the R&LS actually states:

1) (10.26) "the scale of need does not lend itself to a foodstore capable of retaining a significant proportion of main food

Core Strategy Submission Document

O - 16764 - 14229 - Design, 5.4 - i, iii

16764 Object

CHAPTER 5 Design, 5.4

shopping expenditure".

2) (10.28) "There is no immediate capacity for additional floorspace".

3) (10.29) "we recommend focus be maintained on developing Hockley's existing strengths, rather than retail expansion"

4) 10.31 "the current nature of Hockley does not lend itself to classification as a 'town centre' as defined by PPS6. Moreover, we have identified that it has a very small catchment population. Accordingly, the council may wish to consider reclassifying Hockley from a town centre to a district centre".

Remove threat of compulsory purchase orders.

The Council will work with landowners and its partners to deliver the HAAP.

Chapter 5: Character of Place and Local Lists

Para.5.4 "Rochford district has unique character..stems from traditional buildings..still dominate towns and villages".

Para.5.17 "Council believes many buildings..are of local distinctiveness..part of..cherished local scene".

This only appears to apply to certain places: Rochford, Rayleigh, greenbelt villages. Many Hockley conservable items have been systemically removed for supposedly lucrative development in face of widespread protect. This is for supposed need for housing. In fact heritage items have been replaced by dwellings most cannot afford, and/or are hard to sell due to unsuitability of massing and siting. Many other homes are jeopardised by this practice.

Conclusion

Core Strategy Submission DPD is basically unsound in many respects:

Incomplete information. Amongst others, it refers to Hockley AAP, the first stage of which is complete, but not other three. Rochford AAP first stage has been published in arrears of Core Strategy Submission. Rayleigh AAP is still awaited. Precise housing sites are absent, as Urban Capacity Study 2007 has been superseded by Strategic Housing Land Availability Assessment, not yet published. Traders, residents, are thus responding to Core Strategy Submission with incomplete information.

Lack of community involvement. Chapter 1, Introduction, para. 1.11 "Community involvement is an essential part of the plan making process". In Statement of Community Involvement 2006 Rochford RDC "recognises need to enable people..to have their voices heard".

Re Public Meetings: "Consideration will be had to timing and venue to ensure meeting is as accessible as possible".

Hockley Area Action Plan as an example of the opposite of all this:- Presentation of document was at Hullbridge, 7.30 p.m. It was also discussed with JAAP at Rochford Freight House (for traders only) at 7 a.m., without publicity. Excuse made: HAAP on RDC website, which none will seek unless knowing it is there. Rochford District Matters newssheet had minute articles on p.3, half way through consultation period. Another excuse: a second presentation by Hockley Residents Association with planning officer present: only because of complaints, and it is not the HRA's responsibility to RDC's job. Due to unavoidable haste of calling meeting, few knew and only 50 were present.

In Core Strategy Submission Hockley Parish Plan has been ignored. Proposals also ignore 95% rejection rate response to HAAP 2009, which included proposals for Eldon Way employment site.

Unfettered right of developers to carry on as if Core Strategy didn't exist. In PPS 12, Ch.4.6 states: "Core Strategies should be flexible and able to show how they handle contingencies". Several large planning applications have been submitted proposing developments outside the Core Strategy which does not indicate how such applications will be handled and does not comply with PPS 12.

Where are we? Finally, at Chapter 1, Introduction, para. 1.24: "the Core Strategy will have to be reviewed in the event of a new Local Area Agreement, post-2011, setting different priorities". So what purpose does all this work serve? So we have hardly finished this exercise, before it all starts again?

Summary:

"Rochford district has unique character..stems from traditional buildings..still dominate towns and villages".
"Council believes many buildings..are of local distinctiveness..part of..cherished local scene".

This only appears to apply to certain places: Rochford, Rayleigh, greenbelt villages. Many Hockley conservable items have been systemically removed for supposedly lucrative development in face of widespread protect. This is for supposed need for housing. In fact heritage items have been replaced by dwellings most cannot afford, and/or are hard to sell due to unsuitability of massing and siting. Many other homes are jeopardised by this practice.

Full Text: ROCHFORD DISTRICT COUNCIL - LOCAL DEVELOPMENT FRAMEWORK CORE STRATEGY SUBMISSION
SEPTEMBER 2009

Icen Projects Ltd (Icen) has been instructed by Colonnade Land LLP (Colonnade) to submit representations to the Rochford Local Development Framework Core Strategy Submission (CSS).

a) Overview

It is our conclusion that the CSS is not justified, effective or consistent with national policy, as required by Planning Policy Statement 12: Creating Strong Safe and Prosperous Communities through Local Spatial Planning (PPS12) and is therefore vulnerable to being found unsound by an Inspector through the Examination in Public.

b) Background and Summary

These representations follow those made by Icen on behalf of Colonnade to the Preferred Options Core Strategy, submitted via letter dated 17 December 2008. In this regard, we would request that the Council confirms that the representations made to the Preferred Options Core Strategy will be taken into account alongside the current representations, particularly as there are a number of cross references between the two sets of representations.

It is not considered necessary to reiterate the content of the previous representations, as they were made at the appropriate stage and will be considered by the Planning Inspectorate in due course, but it is inevitable that certain elements will require restating where it is not clear that they have been taken into account in the production of the CSS. For clarity, therefore, Colonnade feel that it is appropriate to clarify the 'in-principle' issues that were raised in the representations to the Preferred Options Core Strategy, recognising that these issues were raised in the context of a wider and more coherent justification made within the representations:

- â€¢ Further cross-referencing of the recommendations made within the evidence base is required;
- â€¢ Greater focus should be placed on promoting Rochford as the principal settlement within the District;
- â€¢ Coombes Farm is the most logical location for residential development abutting the urban area of Rochford and as such warrants recognition as a general location for residential development;
- â€¢ The allocation of Three Ashes Farm for employment generating uses will be pursued;
- â€¢ Recognition that it is not realistic to expect residential allocations to be met mainly on Brownfield sites, nor should the intensification of smaller sites in residential areas be pursued;
- â€¢ Many of the sites identified as suitable for residential development will not be viable and will not come forward for development within the timescales anticipated;
- â€¢ The failure to provide the necessary justification for the proposed infrastructure improvements sought in Appendix H1;
- â€¢ The inclusion of an affordable housing exception policy was sought; and
- â€¢ The need to identify sites capable of delivering employment growth in the short term.

Following assessment of the CSS presented by the Council for consultation prior to submission to the Secretary of State, Colonnade considers the Plan to be 'unsound' as the document consistently fails to meet the tests of soundness set out in the table following Paragraph 4.52 of PPS12. For clarity, PPS12 confirms that to be 'sound' a Core Strategy should be JUSTIFIED, EFFECTIVE and consistent with NATIONAL POLICY and defines 'justified' as "founded on a robust and credible evidence base" and "the most appropriate strategy when considered against the reasonable alternatives" and 'effective' as "deliverable", "flexible" and "able to be monitored".

The rationale for the above is identified in the remainder of these representations, which are provided in the interests of ensuring the Council delivers a strong, robust and logical Core Strategy that guides the future development of the District in a justified and effective manner.

b) Colonnade

As the Council is aware from previous submissions to the Local Development Framework, Colonnade is a strategic land company with a particular interest in the future development of the District as a consequence of a number of sites that it controls, particularly around Rochford.

The Council will also be aware that Colonnade has recently submitted an outline planning application for the residential development of the land at Coombes Farm, Rochford to provide a sustainable urban extension comprising up to 326

16252 Object

CHAPTER 5 Policy CP1 - Design

residential dwellings, with associated accesses and community uses. Whilst the planning application process is clearly separate from the Local Development Framework production process, Colonnade wishes to continue the promotion of the site as a suitable location for residential development.

Accordingly, these representations focus on the legal requirements and tests of soundness associated principally with the Housing and Employment chapters of the CSS, with reference where appropriate to the sites that are controlled by Colonnade, the outline planning application at Coombes Farm and other issues where relevant.

c) Housing

i. Date of Adoption

The CSS assumes an adoption date of 2010 and plans for the provision of housing to 2025.

Taking account of the potential delays to the adoption of the Plan, including the Examination process, it would be more appropriate for the CSS to provide sufficient flexibility to allow for delays in its adoption. Colonnade considers an adoption date of 2011 for the CSS is a more realistic target.

Taking account of the advice in Paragraph 4.13 of PPS12, which states that the time horizon for the Core Strategy should be "at least 15 years from the date of adoption" it would be appropriate for the CSS to plan for the provision of housing to 2026 at the earliest. As such, Colonnade does not consider the CSS to be 'flexible' in the context of the tests of soundness in the table following Paragraph 4.52 of PPS12.

ii. Housing Delivery

However, setting the above aside, the Housing Chapter identifies the minimum housing delivery target for the period 2001 to 2021 of 4,600 dwellings as set out in the East of England Plan, with the annual average requirement of 250 dwellings per annum to extend provision from 2021 to 2025. It also confirms that the residual target for the period 2006 to 2021 is 3,790 dwellings, taking account of the delivery of 810 dwellings in the period 2001 to 2006, and a further 618 dwellings have been completed between 2006 and 2008.

This leaves a residual housing provision target of a minimum of 3,172 dwellings in the period 2008 to 2021. Taking into account the required provision beyond 2021, the residual housing provision target in the period 2008 to 2025 is a minimum of 4,172 dwellings. The disparity between these figures and those provided within the CSS are explained by the rounding down of the annual average delivery requirement in the period 2006 to 2021 to 250 dwellings per annum, compared with the actual figure of 252.67.

The table at Paragraph 4.6 of the CSS identifies the source of housing provision that will meet the identified minimum requirements and includes figures for 'Extant Planning Permissions' and 'Existing allocations/other appropriate sites identified in Strategic Housing Land Availability Assessment'. These figures, along with the actual completions within the period are combined to produce the figure for the 'Total without Green Belt release' figure.

Setting aside the concern regarding under-provision associated with the rounding down of the annual average delivery requirement in the period 2006 to 2021, the CSS fails to identify the sites that will contribute to the 'Extant Planning Permissions' provision. The identification of the sites that will contribute to the 'Extant Planning Permissions' should be provided in the context of the findings of the Inspector in the appeal by Asprey Homes [APP/G5180/A/07/2043219/NWF] who determined that the reliance on a delivery rate of 100% is unsafe [IR287].

Furthermore, at the time of writing these representations, the Strategic Housing Land Availability Assessment 2009 has not been published. It is impossible therefore for a full assessment of the proposed housing provision to be undertaken to confirm whether the CSS is 'founded on a robust and credible evidence base' [test of soundness in the table following Paragraph 4.52 of PPS12].

iii. Redevelopment of Employment Sites

Paragraph 4.14 of the CSS refers to the identification of the four employment sites that are considered by the Council to be suitable for redevelopment to residential use. However, the failure to publish the Strategic Housing Land Availability Assessment 2009 either before or alongside the publication of the CSS means that the assumptions made by the Council as to the suitability, availability, viability and deliverability of the sites cannot be assessed.

It has been necessary, therefore, to review the assumptions made in the Rochford Urban Capacity Study 2007 (UCS) regarding the sites. Within the section of the UCS entitled 'Redevelopment of Established Employment Land' [pages 22 & 23] includes a list of those sites assessed, their indicative capacities and the probability of residential development coming forward at the sites within the plan period (identified elsewhere as 2001 - 2021). The list includes the four sites identified in the CSS of Eldon Way/Foundry Estate, Hockley; Rawreth Lane Industrial Estate, Rayleigh; Stambridge Mills; and Star Lane Industrial Estate, Great Wakering.

In total, the UCS identifies an indicative residential redevelopment capacity of 486 units on the four sites (118, 220, 60 and 88 respectively). Of these, it identifies the Rawreth Lane Industrial Estate and Stambridge Mills as having a 'high'

16252 Object

CHAPTER 5 Policy CP1 - Design

probability of coming forward for development in the Plan period (2001 - 2021), which would deliver 280 residential dwellings using the Council's own figures. The Star Lane Industrial Estate (referred to in the UCS as the Star Lane Brickworks) is identified as having a 'medium' probability of coming forward for development in the Plan period, with capacity to deliver 88 residential dwellings. It is unclear, therefore, where the figure for 'Existing allocations/other appropriate sites identified in Strategic Housing Land Availability Assessment'.

Set against this is the identification of these four sites in the CSS as being capable of delivery for residential development within the Plan period, with 671 units delivered between 2006 and 2015 and a further 506 units between 2015 and 2021.

The UCS also states in the same section that:

"There are considerable areas of land in the district that are currently allocated for, and in use as, employment land. The redevelopment of such sites for residential use would reduce demand for residential development on greenfield sites, but would at the same time create a need for alternative sites to be found for employment. Such an approach, which would be likely to require the decontamination of existing employment land to make it fit for residential use, together with development of a greenfield site and implementation of additional infrastructure to serve the new employment area, may well be unsustainable." [our emphasis]

The UCS appears to confirm therefore, that not only would the redevelopment of the four sites listed in the CSS be unlikely within the Plan period, but also potentially unsustainable. In this regard, it is notable that the promoters of Stambridge Mills sought the Screening Opinion of the Council as to whether Environmental Impact Assessment of the planning application for the redevelopment of the site for residential use was required in 2007, but to date are yet to submit a planning application for the redevelopment of the site.

In light of this, Colonnade does not consider the CSS is 'the most appropriate strategy when considered against the reasonable alternatives' [test of soundness in the table following Paragraph 4.52 of PPS12], which include the provision of residential development in East Rochford.

iv. Strategic Housing Growth to the East of Rochford

Furthermore, whilst paragraph 2.62 of the CSS identifies concern relating to the identification of locations to the east of Rochford for development on the basis that 'vehicular movements would inevitably be directed through Rochford's historic core', the CSS later identifies Stambridge Mills as a suitable site for residential redevelopment.

In light of the evident conflicts between the evidence base provided in support of the CSS and the absence of other evidence, the CSS is not considered 'sound' in the context of the tests of soundness in the table following Paragraph 4.52 of PPS12.

v. Housing Trajectory

Paragraph 4.28 of the CSS confirms that policies H1, H2 and H3 of the CSS will deliver housing supply as illustrated in the Housing Trajectory at Appendix H2. This Housing Trajectory is transposed from the 2008 Annual Monitoring Report (AMR).

Whilst on the face of it, the Housing Trajectory appears to confirm that the Council can meet its requirement to identify a five year housing supply, many of the sites identified within the AMR do not conform to the guidance issued by CLG in August 2008, on the assessment of a five year land supply. The guidance identifies sites that can be included within the five year assessment of housing supply as:

"those that are allocated for housing in the Development Plan, sites that have planning permission (outline or full planning permission that has not been implemented) and specific, unallocated brownfield sites that have the potential to make a significant contribution to housing delivery during the 5 year period".

Table 4.10: Projected Net Completions of the AMR confirms that the five year housing land supply figure includes sites from 'other land allocated for residential purposes', which are based on land allocations outside existing settlements. However, it should be clarified that these land allocations are not currently allocated for housing development in an adopted Development Plan. As such, these unallocated greenfield sites that are yet to make significant progress through the planning system should be discounted and the five year housing land supply recalculated.

The table below has been prepared to confirm the extent of the shortfall should the sites from 'other land allocated for residential purposes' be removed from the calculation of the Rochford five year housing land supply, in accordance with the guidance issued by CLG:

217 dwellings
Allocations on 'other land allocated for residential purposes' (B)
150
Residual delivery (A-B)
67 dwellings
Delivery Shortfall
150

Year
1st April 2011 to 31st March 2012
Predicted Delivery (A)
544 dwellings
Allocations on 'other land allocated for residential purposes' (B)
300
Residual delivery (A-B)
244 dwellings
Delivery Shortfall
300

Year
1st April 2012 to 31st March 2013
Predicted Delivery (A)
395 dwellings
Allocations on 'other land allocated for residential purposes' (B)
375
Residual delivery (A-B)
20 dwellings
Delivery Shortfall
375

Year
1st April 2013 to 31st March 2014
Predicted Delivery (A)
300 dwellings
Allocations on 'other land allocated for residential purposes' (B)
300
Residual delivery (A-B)
0 dwellings
Delivery Shortfall
300

TOTAL

Predicted Delivery (A)
1,562 dwellings

Allocations on 'other land allocated for residential purposes' (B)
1,125 dwellings

Residual delivery (A-B)
437 dwellings

Delivery Shortfall
1,125 dwellings

The above table confirms that the removal of the 'other land allocated for residential purposes' from the calculation of the Rochford five year housing land supply leaves the Council with a minimum net additional housing delivery of 437 dwellings, which equates to a supply of 1.7 years based on the adjusted annual delivery target of a minimum of 255 net

16252 Object

CHAPTER 5 Policy CP1 - Design

additional dwellings per annum. As such, the Council is failing to meet its requirement to demonstrate a five year housing land supply in accordance with PPS3 and the supporting guidance provided by CLG. It is notable that the recent application by David Wilson Homes at Land between Main Road and Rectory Road and Clements Hall Way, Hawkwell identifies an even greater shortfall in the Council's five year housing land supply.

In addition to the above, the AMR does not include a commentary on how deliverability has been assessed against the requirements of paragraph 54 of PPS3.

Furthermore, the guidance from CLG confirms that the windfall sites cannot be relied upon in demonstrating a five year supply unless a Local Planning Authority can demonstrate genuine local circumstances exist to allow this exception. However, the second paragraph of the section entitled 'Housing Trajectory and Five Year Housing Supply' confirms that the estimated completions in the years 2008 to 2013 includes estimated yields through 'intensification' coming forward in future years. With reference to the definition of 'intensification' on page 13 of the AMR, it appears that the 'Housing Trajectory and Five Year Housing Supply' also includes provision for windfall sites. As such, the Council is required to demonstrate the 'genuine local circumstances exist to allow this exception'.

The pressures on delivery and need for additional sites are more acute when it is considered that an average delivery rate of 204 dwellings per annum was achieved during a strong period of housing market growth. In view of the current economic downturn, and significant problems faced within the housing market, the Council should seek to identify appropriate and deliverable sites to meet its regional housing target provision commitments. Suitable sites would include Coombes Farm, which has been positively promoted for development through the LDF process.

It may, therefore, be more appropriate for the Council not merely to allocate sufficient sites to meet the minimum targets set down by the East of England Plan, but to identify a reservoir of land capable of coming forward for development should the sites identified through the CSS and Allocations Development Plan Documents (DPD) fail to come forward for development within the anticipated timescales.

vi. Appendix H1

As set out in the representations to the Preferred Options Core Strategy, there is continuing concern that the list of improvements to infrastructure required in support of residential development as set out in Appendix H1 fails to provide the necessary justification for its inclusion. Whilst the preamble seeks to clarify why the infrastructure is sought, the inclusion of this list should be fully justified, otherwise it is of little value. Furthermore, it would be of benefit to provide further details of the existing community infrastructure provision and capacity within the evidence base.

The failure to provide the necessary justification for its inclusion means that the CSS will not be 'founded on a robust and credible evidence base' [test of soundness in the table following Paragraph 4.52 of PPS12].

d) Character of Place

As set out in the representations to the Preferred Options Core Strategy, Colonnade considers that, with respect to the requirement to produce and adhere to Development Briefs for large residential developments, as set out in Policy CP1, the Council should not seek to impose further demands on developers where existing regulations provide sufficient requirements regarding design. In this instance, Design and Access Statements provide sufficient design guidelines for developments and there is no additional information provided in the policy or supporting text that clearly sets out the justification for this requirement.

e) Green Belt

With reference to the comments regarding the redevelopment of employment sites under the 'Housing' section above and the requirement to allocate sufficient land to meet the minimum housing provision targets as required by the East of England Plan, Colonnade considers that the chapter on Green Belt, and policy GB1 in particular, fails to provide the necessary evidence base that will allow it to be monitored effectively.

It is inherent that the proposed redevelopment of previously developed employment sites for residential use in order to reduce the requirement to allocate previously undeveloped land for residential use will displace these employment uses. In turn, therefore, the separate allocation of previously undeveloped Green Belt to accommodate the compensatory employment provision is required. This is accepted in principle at paragraph 11.11 of the CSS.

Without providing clarification of the anticipated quantum of land required to accommodate the provision of housing and compensatory and new employment land, it is not possible to monitor the performance of policy GB1.

However, using the Council's figures in the table setting out the breakdown of the housing provision figures in Chapter 4 of the CSS (assuming that actual completions and extant permissions are all on previously developed land), setting aside the displacement of employment uses referred to above, approximately 42% of the required minimum housing provision target is capable of being accommodated on previously developed land (2,005 units from a total of 4,750). As such, the Council is required to provide at least 58% of the required minimum housing provision target on the Green Belt (2,745 units from a total of 4,750).

16252 Object

CHAPTER 5 Policy CP1 - Design

If these figures are adjusted to take account of the displacement of employment uses (assuming the provision of an equal quantity of land is required to compensate for the employment land that is redeveloped), this figure changes to 17.5% on previously developed land and 82.5% on Green Belt (828 and 3,922 units from a total of 4,750 respectively). Even allowing for the achievement of higher densities of employment on new developments, the figures above are unlikely to change significantly.

Furthermore, the table in Chapter 4 also confirms that no previously developed land will be available for development beyond 2021, or 2015 if account is taken of the displacement of the employment uses.

In light of this, not only does Chapter 6 fail to provide the necessary evidence base that will allow it to be monitored effectively, it is also necessary to consider whether it presents the most appropriate strategy for addressing the required release of Green Belt land to accommodate the defined housing and employment delivery targets to 2025 and beyond as necessary. Colonnade considers a more robust approach that is flexible and capable of being monitored, would be to clearly identify those sites capable of delivery in the short term, which for the avoidance of doubt includes those sites being promoted by Colonnade, with a reservoir of alternative sites set aside for future growth.

As set out in the representations to the Preferred Options Core Strategy, Colonnade considers that the inclusion of an affordable housing exception policy within the CSS will aid the delivery of community housing within rural areas. However, the CSS does not contain such a policy, or adequately address the issue of community housing within rural areas and the CSS is not considered to provide sufficient flexibility to allow for the delivery of essential rural housing.

f) Environmental Issues

Colonnade has concerns regarding the justification for and effectiveness of a number of the policies contained within the Environmental Issues chapter, as follows:

â€¢ Policy ENV1: The Council fails to identify how it will "maintain, restore and enhance" the sites of nature conservation importance that are identified, or how the performance of this policy will be monitored;

â€¢ Policy ENV3: In the context of the advice at paragraph 4.32 of PPS12 regarding the reformulation of national policies, Colonnade does not consider that this policy is required; and

â€¢ Policy ENV9: As set out in the representations to the Preferred Options Core Strategy, Colonnade does not consider that the necessary evidence base has been provided to justify a policy that seeks to go above and beyond the policy targets for the Code for Sustainable Homes as set out by Central Government.

g) Community Infrastructure, Leisure and Tourism

Policy CLT1 refers to the requirement for residential and employment development to contribute to the infrastructure identified in Appendix CLT1 through Standard Charges.

However, whilst the general principle of securing planning obligations through the application of standard charges is broadly accepted, the list of infrastructure requirements set out in Appendix CLT1 is not supported by sufficient evidence base to identify its robustness and credibility. As such, Colonnade does not consider either policy CLT1 or Appendix CLT1 is justified in the context of PPS12.

It is also noted that, despite the clarification sought by Colonnade at the Core Strategy Preferred Options stage, the CSS fails to confirm what information should be contained within Health Impact Assessments, which are required by policy CLT4. Once again, Colonnade requests further clarification of what is involved in the assessment and the expected outputs, which will provide greater clarity and will allow the policy to be monitored.

h) Transport

Policy T8 confirms that the Council will apply minimum parking standards. As set out in the representations to the Preferred Options Core Strategy, the guidance in Planning Policy Guidance Note 13: Transport (PPG13) is clear regarding the imposition of parking standards.

Paragraphs 52-56 of PPG13 confirm that the Local Planning Authorities should apply maximum not minimum parking standards. In order to satisfy the legal requirements set out in PPS12, the policy must reflect PPG13 to promote sustainable transport choices and further provide incentives for developers to locate further residential land closer to local service centres by requiring maximum parking standards for residential developments.

i) Economic Development

As set out in the representations to the Preferred Options Core Strategy, the land at Three Ashes Farm provides an excellent opportunity to deliver employment growth in the short term and may be a suitable site for the 'Eco-Innovation Centre' that is being promoted by the Council. Its identification as a suitable location for strategic employment growth, or the provision of an Eco-Innovation Centre, would accord with the general principles of the policies contained within Chapter 11.

Core Strategy Submission Document

16252 Object

CHAPTER 5 Policy CP1 - Design

The identification of Purdeys Industrial Estate as fit for purpose (in paragraph 11.32 and the Council's 2008 Employment Land Study 2008) and therefore it should be maintained and if possible expanded, is welcomed and Colonnade considers that Three Ashes Farm could deliver this expansion, providing a natural extension to Purdeys Industrial Estate and being strategically located close to the Airport.

Three Ashes would address the negative impacts that the nearby residential area experiences from the existing Industrial Estate by providing a buffer between established uses and the residential area with less intensive employment activities. The highways analysis that has been carried out has suggested that it would not have an adverse impact on roads and congestion. Furthermore, there are very few opportunities for businesses to expand and Three Ashes could provide this opportunity.

j) Conclusions

Following the submission of representations to the Preferred Options Core Strategy, Colonnade is disappointed to note that the CSS fails to take account of the majority of the issues raised in their representations.

In addition, Colonnade considers the plan to be 'unsound' as the document consistently fails to meet the tests of soundness set out in the table following Paragraph 4.52 of PPS12 and respectfully requests that the Council notifies Icen, on behalf of Colonnade, of the future arrangements for the Examination of the Core Strategy. Furthermore, Colonnade wishes to take this opportunity to formally register a request to appear at all stages of the Examination in Public, including the pre-hearing meeting and any planned hearing sessions whereby issues raised in the context of this letter are to be discussed. Please confirm this request, and that the representations made to the Preferred Options Core Strategy will be taken into account alongside the current representations, by way of return to this letter.

Icen Projects, on behalf of Colonnade Land LLP trusts that the Council will find these representations to be constructive and helpful in taking forward the Core Strategy. Should you wish to discuss any aspect of these representations further, please do not hesitate to contact us.

Summary:

d) Character of Place

As set out in the representations to the Preferred Options Core Strategy, Colonnade considers that, with respect to the requirement to produce and adhere to Development Briefs for large residential developments, as set out in Policy CP1, the Council should not seek to impose further demands on developers where existing regulations provide sufficient requirements regarding design. In this instance, Design and Access Statements provide sufficient design guidelines for developments and there is no additional information provided in the policy or supporting text that clearly sets out the justification for this requirement.

CORE STRATEGY SUBMISSION DOCUMENT

Thank you for your letter dated 21 September 2009 consulting English Heritage on the above document. Our comments are set out below.

CHAPTER 4 HOUSING

Vision and objectives

While we note that character of place is addressed in chapter 5, it is important that this consideration is recognised as relevant within the Housing chapter. Paras 2.33, 2.69 and 2.73 also recognise the importance of character and sense of place in the built environment. We recommend that this consideration should be integrated into the vision and objectives for housing in order to improve the clarity of the plan, and its consistency with advice in PPS1.

Recommendation:

The following amendments are suggested:

- Vision in five years: add 'settlement character' after 'infrastructure'
- Vision by 2025: add 'and places' after 'communities' in bullet 1
- Objectives: In objective 2 amend to '...sustainable locations, enhancing sense of place and having regard to..'
- Para 4.19: Amend bullet 5 to read 'The historical, agricultural and ecological value of land, and settlement character'

CHAPTER 5 CHARACTER OF PLACE

We strongly support this section and policies CP1, CP2 and CP3. In the absence of policy coverage for listed buildings and scheduled monuments we recommend that para 5.9 should refer to PPGs 15 and 16, as well as draft PPS15.

CHAPTER 8 ENVIRONMENTAL ISSUES

We welcome the references the historic environment in the objectives and in policies ENV1 and ENV2.

Policy ENV6 Large Scale Renewable Energy Projects

We consider that this policy should refer to the historic interest of sites to reflect the advice in PPS22 more appropriately.

Recommendation: amend the first bullet in policy ENV6 to read '...it's ecological, historic or landscape value...'

CHAPTER 11 ECONOMIC DEVELOPMENT

Policy ED2 London Southend Airport

We understand that the grade I listed church in the vicinity of the runway will be protected in any proposals for expansion of the airport and the Core Strategy policy does not suggest otherwise. We will respond to the detail of proposals for the airport through responses to consultations on the Joint Area Action Plan and any planning applications.

In the interests of clarity, the above comments where we suggest changes to the Core Strategy should be recorded as objections to the soundness of the plan in terms of consistency with national guidance. However, we hope that it will be possible to agree amendments on these points prior to the public examination.

We would be happy to discuss any of these comments if you would find this useful.

Summary: CHAPTER 5 CHARACTER OF PLACE

We strongly support this section and policies CP1, CP2 and CP3.

1.0 Instruction and Introduction

1.1 Charles Planning Associates Limited (Chartered Town Planners) is Instructed by Swan Hill Homes Limited (Swan Hill) to prepare and submit representations on their behalf in respect of the Rochford District Local Development Framework: Core Strategy Submission (September 2009) Development Plan Document.

1.2 The comments refer to the relevant sections and policy designations in the Submission document, as appropriate.

1.3 The comments set out in this submission are intended to assist the District Council in taking forward its Local Development Framework. It is our intention to continue to be involved in the LDF preparation process and we look forward to the opportunity to comment further at the Examination to the Core Strategy.

1.4 If you have any queries regarding the content of this submission then please do not hesitate to contact:

Peter Kneen BSc (Hons) MSc MRTPI
Planner

2.0 Housing:

Policy H1 - The Efficient Use of Land for Housing

2.1 Swan Hill recognises the importance of seeking to concentrate new developments mainly in the existing urban areas, on previously developed land where possible, particularly in view of the Government seeking to ensure 60% of all such new developments are on previously development land (PDL).

2.2 However, given the character of the District, and the strategic housing requirement of the East of England Plan, Swan Hill supports the approach that the Council must also make provision for additional development on the edge of existing settlements on greenfield sites, particularly in the most sustainable locations. As such, Swan Hill supports that where feasible, the redevelopment of existing employment sites for residential/employment purposes can make a contribution towards the strategic housing requirement, provided that sufficient additional employment land is brought forward to ensure the stability of employment levels in the District, and to ensure employment growth meets the East of England Plan requirements.

2.3 Swan Hill considers that Policy H1 should include consideration that new extensions to existing settlements have regard to their potential impact on the wider characteristics and openness objectives of the Green Belt.

Policy H2 - Extensions to Residential Envelopes and Phasing

2.4 Swan Hill generally supports the approach taken by the Council in this policy. As set out above, Swan Hill consider the Council's acknowledgment that housing requirements should be met through the allocation of land on the edge of the existing settlements is the most suitable way forward to meeting the Council's strategic housing requirement and complies with the advice in PPS3.

2.5 The need for suitable greenfield urban extensions represents the best way forward for the Council to meet its strategic housing requirement, as set out in the East of England Plan. Swan Hill supports the recognition that the potential supply of alternative previously developed sites is limited, without detrimentally affecting the character of the District, and therefore the best way forward is the use of sustainable greenfield urban extensions to the existing settlements of the District.

2.6 However, Swan Hill consider that a fundamental consideration that the District Council should consider relates to the potential impact of the urban extensions on the Green Belt policy has been somewhat overlooked. The wider sustainability credentials of the settlements of the District should only be one of many key considerations for determining the level of expansion. In view of the proximity of Southend-on-Sea to all the main settlements of the District, and the influence this has on the likely location many people would travel for employment and leisure, sustainability of many of the settlements is not a key overarching factor, and greater weight should be placed on the potential impact on the openness of the Green Belt, as this cannot be remedied if development occurs in the wrong location.

2.7 As such, Swan Hill considers that determining the location of growth for the main settlements should be to identify

16879 Support

CHAPTER 5 Policy CP1 - Design

those locations where the impact on the wider setting of the Green Belt can be minimised. Further justification for those general locations chosen should be identified in Policy H2. In this regard, Swan Hill has serious concerns regarding the removal of Land South West of Great Wakering as a viable option for the growth of the settlement. The development of this area of Great Wakering, in addition to the potential redevelopment of the Star Lane Industrial Estate could provide a more comprehensive development, whilst ensuring that the wider openness of the Green Belt is maintained. Land South West of Great Wakering is significantly better placed to limit the impact on the wider Green Belt than Land West of Great Wakering, and could contribute to the provision of an important amenity and wildlife site for the local community.

2.8 In addition, Swan Hill consider that the Council now has no reserve provision in the event that any of the existing employment sites set out in Policy H1 fail to come forward for development within the envisaged timescale. Further, Land West of Great Wakering has not been identified in the SHLAA as a deliverable site to help meet the strategic housing requirement, contrary to the requirement set out in PPS3.

2.9 As such, Swan Hill would support the provision of suitable sites which could be safeguarded for future development in the likelihood of a shortfall in supply.

Policy H3 - Extensions to Residential Envelopes Post 2021

2.10 As set out above, Swan Hill supports the overall approach the Council has taken towards the provision of sustainable urban extensions as a suitable means of meeting their strategic housing requirement. However, as set out for Policy H2 above, Swan Hill has serious concerns regarding the removal of several proposed sites set out in the October 2008 Preferred Options Core Strategy, without any guarantee of the ability to deliver those sites set out in Policy H1.

2.11 As also considered above, the inclusion of West of Great Wakering for 250 dwellings should not be included ahead of South West of Great Wakering, in view of the fact that the site is not identified in the SHLAA as available, suitable and achievable as required by PPS3, and thus is not supported by a robust and creditable evidence base for its inclusion as a strategic site for development.

2.12 Whilst Swan Hill acknowledge that alterations to Policy H1 has resulted in the removal of some locations for growth in Policy H3 (as set out in the Sustainability Appraisal), Swan Hill does not consider that the most appropriate locations have been chosen.

2.13 In addition to the matters raised above, the use of West of Great Wakering would also result in the loss of valuable agricultural land, which clearly in a Green Belt location, should be less suitable for development than other sites, such as South West of Great Wakering, which would have limited impact on the wider Green Belt policy, and not result in the loss of valuable agricultural land.

2.14 Finally, in respect of Policies H1, H2 and H3, all of the above comments are based on our interpretation of the Submission Version Core Strategy when compared to the October 2008 Version of the Core Strategy. Without the ability to undertake a detailed assessment of the Council's SHLAA, it is not possible to clarify the proposed Core Strategy position regarding the proposed direction of growth proposed for the settlements in the District. As such, Swan Hill reserves the right to make additional representations regarding the proposed Policies H1, H2 and H3 following the publication of the SHLAA in due course.

Policy H4 - Affordable Housing

2.15 In general terms, Swan Hill supports the approach taken by the Council towards the provision of affordable housing for new residential developments. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H5 - Dwelling Types

2.16 Swan Hill supports the policy provision of H5, and considers that the approach taken by the Council for this policy represents a suitably flexible alternative to stipulating percentages of dwelling mix, sought by some local authorities. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H6 - Lifetime Homes

2.17 In regard to this policy, Swan Hill objects to the Council's policy where all new dwellings should be provided to the Lifetime Homes Standard. Whilst it is acknowledged that the UK has an aging population, Swan Hill considers that seeking to provide Lifetime Homes on all sites is considered to be overly onerous for proposed developers, particularly when considering the requirement for all car parking spaces to be suitable for disabled users, which could result in more schemes becoming unviable. Therefore, the provision of a percentage of Lifetime Homes should be considered through negotiations with the Council at the planning application stage, and should be determined on a case-by-case basis.

3.0 Character of Place: Policy CP1 - Design

16879 Support

CHAPTER 5 Policy CP1 - Design

3.1 The Town and Country Planning (General Development Procedure) Order 1995 (As Amended) makes the submission of a Design and Access Statement for most types of planning applications a Statutory requirement, and as such, the provision of a Design Brief represents a pre-requisite of all major planning applications.

3.2 Policy CP1 seeks to ensure the provision of good, high quality developments that reflect local characteristics and distinctiveness, this ideology is supported by Swan Hill.

4.0 The Green Belt:
Policy GB1 - Green Belt Protection

4.1 Following the amendments to the wording of the Policy since the October 2008 Preferred Options Core Strategy, Swan Hill is now generally supportive of Policy GB1 and its supporting text. However, as expressed above, it is important that where alterations to the Green Belt boundary occur as a result of the extension of the settlements to meet the strategic housing requirement, both the minimal amount of land is taken and where that land is taken for development, it represents the best available land which has a minimal impact of the wider openness characteristic of the Green Belt.

5.0 Environmental Issues:
Policy ENV3 - Flood Risk

5.1 Swan Hill generally supports the approach set out in Policy ENV3 regarding ensuring development accords with the sequential test of PPS25. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV4 - Sustainable Drainage Systems (SUDS)

5.2 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV4. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV8 - On-site Renewable and Low Carbon Energy Generation

5.3 Whilst Swan Hill recognises the importance of reducing carbon emissions, particularly in new housing developments, and the role this can play in reducing the nations overall Greenhouse emissions. As such Swan Hill is generally supportive of Policy ENV8. It is noted that Policy ENG1 of the East of England Plan sets out a threshold of developments comprising 10 or more dwellings. Swan Hill consider it important for the District Council to justify the reduction in the threshold level.

5.4 Further, no assessment of Policy ENV8 has been set out in the Sustainability Appraisal which justifies the change in threshold from that of Policy ENG1 of the RSS.

Policy ENV9 - Code for Sustainable Homes

5.5 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV9. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

6.0 Community Infrastructure, Leisure and Tourism:
Policy CLT1 - Planning Obligations and Standard Charges

6.1 Swan Hill generally supports the overall approach the Council has taken in Policy CLT1. It is considered Policy CLT1 sets out a degree of flexibility to ensure that all sites are considered on a site-by-site basis, assessing the individual merits of each planning application, in order to ensure the levels of contributions applicable meet the five tests of Circular 05/05. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policies CLT5 - Open Space;
CLT7 - Play Space;
CLT8 - Youth Facilities; and,
CLT10 - Playing Pitches

6.2 Swan Hill supports the need for new residential developments to incorporate a degree of new publicly accessible open space, children's play space, youth facilities and playing pitches, and as such, generally supports the policy approaches taken by the Council.

6.3 However, it is important that whilst the Council may seek to undertake an assessment of providing standard charges for new development, which, as set out in Policy CLT1, this should be based on thorough public consultation and consideration and sound justification. Swan Hill consider that within the provision of a standard charge, it is important that such provision allows for a degree of flexibility to ensure that each site is assessed individually and on its own merits. This is particularly important for those sites close to existing open spaces and facilities. As such, the levels of

16879 Support

CHAPTER 5 Policy CP1 - Design

open space and recreation facilities required in the 'standard charge' should be based on an up-to-date PPG17 Open Space assessment, which should be used to form a key consideration in the levels of provision likely to be required in the standard charge system proposed.

7.0 Transport: Policy T1 - Highways

7.1 Swan Hill supports the overall objectives set out in Policy T1 requiring developments to be located and designed to reduce the reliance on the private car and to meet the infrastructure needs generated by development or seek to help achieve these needs is acceptable in principle.

7.2 Swan Hill recognises the importance of providing sufficient infrastructure provision to meet the requirements of development, and that where developments have insufficient consideration of impact on existing infrastructure, they should be considered unacceptable and contrary to National policy guidance. However, Swan Hill considers it important to emphasise that the developer's role should not be seen as a means to meet existing shortfalls in provision.

Policy T3 - Public Transport

7.3 Swan Hill is generally supportive of the policy approach set out in T3, however, as set out in paragraph 7.2 above, it is important that the District Council do not consider that it is the developer's responsibility to resolve existing shortfalls in provision of public transport, and any contribution towards additional public transportation provision should only be to mitigate against the additional level of demand likely from the development proposed.

Policy T5 - Cycling and Walking

7.4 Swan Hill supports the general approach to this policy, as Swan Hill recognises the importance of promoting the use of alternatives to the private car. The policy provision acknowledges the need to ensure relevant contributions in the event of additional travel demands generated by individual developments, whilst also setting out additional aspirations for the cycle network in the District.

7.5 As such, Swan Hill considers this policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy T8 - Parking Standards

7.6 The Council has recently (January 2007) adopted SPD on the requirements for parking standards, and as such, Swan Hill generally supports the policy approach chosen by the Council. As set out in the SPD, whilst Swan Hill generally supports the approach taken by the District Council towards setting residential parking standards, in that the Council has recognised that in the suburban areas, even with some access to public transport, the majority of residents will rely on the use of private cars. However, Swan Hill has concerns over the failure of the District Council to comply with the provisions of PPG13: Transport (2001) which sets out that Local Planning Authorities should not set minimum standards for car parking. Whilst it is acknowledged that PPS3 sets out provision for the consideration of local circumstances, it is considered that the Council has not justified this deviation from PPG13's maximum standard.

7.7 Whilst it is acknowledged that such justification may become apparent through the work currently being undertaken by Essex County Council, until such time, the District Council should only seek to apply the maximum standards indicated in PPG13. However, Swan Hill recommends that the District Council make provisions in the wording of the Policy to allow for changes in the event that future policy on car parking standards need to reflect the County standard, following the completion of the County Council review.

8.0 Economic Development: Policies ED3 - Existing Employment Land ED4 - Future Employment Allocations

8.1 In respect of Policies ED3 and ED4, Swan Hill notes that they have changed considerably since the October 2008 Preferred Options document, in that they are site specific regarding the location of the proposed redevelopment of existing employment sites. These four sites are also identified in Policy H1 - Efficient Use of Land, and in general, Swan Hill supports the approach to the redevelopment of these sites (where feasible) based on the assessments of the sites set out in this version of the Core Strategy.

8.2 However, Swan Hill has concerns that these policies might not be considered suitably sound given that insufficient opportunity has been allocated for consultation on their redevelopment. Without the SHLAA being publically available prior to the consultation on this Core Strategy, an insufficient evidence base has been provided to corroborate that these sites are neither suitable or deliverable to meet the test of soundness requirements.

Summary: Policy CP1 - Design

3.1 The Town and Country Planning (General Development Procedure) Order 1995 (As Amended) makes the submission of a Design and Access Statement for most types of planning applications a Statutory requirement, and as

Core Strategy Submission Document

S - 16879 - 8329 - Policy CP1 - Design - None

16879 Support

CHAPTER 5 Policy CP1 - Design

such, the provision of a Design Brief represents a pre-requisite of all major planning applications.

3.2 Policy CP1 seeks to ensure the provision of good, high quality developments that reflect local characteristics and distinctiveness, this ideology is supported by Swan Hill.

Full Text: ROCHFORD LOCAL DEVELOPMENT FRAMEWORK
CORE STRATEGY SUBMISSION DOCUMENT

Thank you for your letter dated 21 September 2009 consulting English Heritage on the above document. Our comments are set out below.

CHAPTER 4 HOUSING

Vision and objectives

While we note that character of place is addressed in chapter 5, it is important that this consideration is recognised as relevant within the Housing chapter. Paras 2.33, 2.69 and 2.73 also recognise the importance of character and sense of place in the built environment. We recommend that this consideration should be integrated into the vision and objectives for housing in order to improve the clarity of the plan, and its consistency with advice in PPS1.

Recommendation:

The following amendments are suggested:

- Vision in five years: add 'settlement character' after 'infrastructure'
- Vision by 2025: add 'and places' after 'communities' in bullet 1
- Objectives: In objective 2 amend to '...sustainable locations, enhancing sense of place and having regard to..'
- Para 4.19: Amend bullet 5 to read 'The historical, agricultural and ecological value of land, and settlement character'

CHAPTER 5 CHARACTER OF PLACE

We strongly support this section and policies CP1, CP2 and CP3. In the absence of policy coverage for listed buildings and scheduled monuments we recommend that para 5.9 should refer to PPGs 15 and 16, as well as draft PPS15.

CHAPTER 8 ENVIRONMENTAL ISSUES

We welcome the references the historic environment in the objectives and in policies ENV1 and ENV2.

Policy ENV6 Large Scale Renewable Energy Projects

We consider that this policy should refer to the historic interest of sites to reflect the advice in PPS22 more appropriately.

Recommendation: amend the first bullet in policy ENV6 to read '...it's ecological, historic or landscape value...'

CHAPTER 11 ECONOMIC DEVELOPMENT

Policy ED2 London Southend Airport

We understand that the grade I listed church in the vicinity of the runway will be protected in any proposals for expansion of the airport and the Core Strategy policy does not suggest otherwise. We will respond to the detail of proposals for the airport through responses to consultations on the Joint Area Action Plan and any planning applications.

In the interests of clarity, the above comments where we suggest changes to the Core Strategy should be recorded as objections to the soundness of the plan in terms of consistency with national guidance. However, we hope that it will be possible to agree amendments on these points prior to the public examination.

We would be happy to discuss any of these comments if you would find this useful.

Summary: CHAPTER 5 CHARACTER OF PLACE

We strongly support this section and policies CP1, CP2 and CP3.

CHAPTER 5 Local Lists, 5.17

Respondent: Ms G Yeadell [7834]

6 Southend Road
Hockley
Essex
SS5 4QQ
01702 205450

Agent: N/A

Full Text: Para 4.8 States sustainability underlines any decisions on housing location, primarily: current and future deliverability of infrastructure, eg roads, services, public transport, health.

Policy H1

Para.4.14 Some employment sites are considered more suitable for other uses (eg housing) including Eldon Way/Foundry, Hockley. This is all open to question.

Hockley-re Eldon Way/Foundry

In CS Preferred Options 2008 policy H2 you discarded N.E.Hockley as a housing option - whilst close to centre, station, "impact on highway network from traffic heading through Hockley..along Ashingdon Road..renders location unviable". Clearly the same principle applied to Eldon Way/Foundry for the same reasons.

Response to C.S Preferred Options 2008 and HAAP 2009

June 2009 issue C S Submission issue says Eldon Way will be used for housing, whereas Sept.2009 issue says "alternative uses, including residential.." to be decided by HAAP (Issues consultation done, Pref.Options issue awaited, but judging from JAAP Pref.Options decision - namely biggest option chosen against overriding opposition, it will be housing).

Need to be logical and even-handed in proposals

Health services GP surgeries are full and a PCT health centre will not occur in the foreseeable economic climate.

Ch.10: Highways and Transport

Policy T1, T2 RDC proposes working with ECC Highways, developers, but admits it has no authority, responsibility here. RDC will seek developer contributions, but this is neither detailed nor costed in CS Submission nor HAAP, and contravenes PPS 12.3 para.4.93 which states "The infrastructure planning process should identify as far as possible infrastructure needs and costs". Idea of paying for road & transport improvements through Standard Charges is unproven and unsound.

Establish likely level of Standard Charges. Accept you cannot turn district into motorways with wholesale demolition.

In neither CS Submission nor HAAP is there any highways improvement, except idea to replace Spa roundabout with traffic lights and 1 way system up Southend Road and Hockley Rise.

Para.10.5 "..highway improvements serving new developments..in a timely manner..ensuring developments delivered alongside necessary infrastructure".

These improvements cannot possibly be delivered. It should be realised: B1013 (Southend Rd), Rectory Road Hawkwell, Ashingdon, West Rochford - all in area proposed for large new developments are former winding, narrow country roads, tarmacked over for motorised traffic. Large housing increments are unsustainable off these roads, which cannot be altered without much destruction.

Reply to CS Pref. Options 2008 & HAAP Issues/Options 2009

Policy T3, CLT1 Appendix CLT1 Public transport RDC admits this is in the private sector. In Hockley, operator has cut No7 service to 1 per hour from Ashingdon Schools, claiming it is unviable beyond. This is unlikely to change as Hockley is car dependant. No8 bus through Hawkwell is cut to 1 per hour to Rayleigh, for same reason as No7. Proposed planning agreements with developers can't run: eg, a community centre or classroom given by a developer remains once he has moved on - how can that apply for an on-going bus service?

Reply to Infrastructure Transport in CS Pref. Opts. 2008 and to HAAP Issues Opts. 2009.

Ch.11 Economic development

Policy ED3 Core Strategy preferred Options 2008 hinted at possible housing in Eldon Way site. June 2009 Submission version, without consultation, said Eldon Way would be housing (map included Foundry, not the text). September 2009 Submission said redevelopment would be in HAAP (which apart from the Issues/Options version, is unfinished. Judging from results of JAAP Preferred Options where biggest option is chosen, though most respondents were against it, site will be housing, without consultation.

16724 Object

CHAPTER 5 Local Lists, 5.17

Para.1.25, Para.11.32 Note CH.1 Introduction to CS Submission 2009 para.1.25 East England Plan requires 3000 additional jobs, presumably to 2021. Revised Southend Airport is expected to drive Economic development. But at para. 11.32 Eldon Way-Foundry estate is planned to be more suitably utilized. "...alternative land will be required to accommodated employment uses so displaced" - ie jobs sent to eg new site near Southend Airport - not new jobs.

Reply to HAAP Issues Options 2009

Remove compulsory relocation

Policy ED4 Policy states Council will allocate 18ha of land to make up for de-allocations in ED3 - that proves point above.

Proposals for moving employment to out of town locations with no existing transport links are contrary to government policies PPG4, PPS1 and PPS4 and Core Strategy Policy T1.

Evidence Base is ignored by contravening Hockley Parish Plan 2007 and ignoring residents' views on HAAP Issues/Options. Next stage of HAAP Preferred Options is pre-empted and rendered irrelevant. Core Strategy plans to relocate Eldon Way Foundry estate to Greenfield site with no nearby bus or railway. RDC plans to upgrade the nearest road to dual carriageway, though the connecting B1013 (through Hockley) will stay single, said by ECC Highways statistics to be 72% capacity. Airport bosses and council cannot suggest there will be no traffic growth from JAAP and new industrial site.

Reply to Hockley Parish Plan 2007. HAAP Issues 2009

Move to new industrial site near airport contravenes PPS4:

- EC7.3C "out of centre sites, with preference given to sites...well served by choice of...transport and...close to centre and...high likelihood of forming links with centre". There is no current public transport and links with centres is unlikely".

- EC 7.5.1 "whether the site is or will be accessible and well served by choice of transport, public transport, walking and cycling, as well as by car...". Remote location, narrow busy B1013 makes the site unsuitable for access by cycle or on foot.

It also contravenes PPS1 (27vii)... "reduce need to travel, encourage accessible public transport provision to secure more sustainable patterns of transport...Planning should actively manage patterns of urban growth to make fullest use of public transport and focus development in existing centres, near to major public transport interchanges". Core Strategy undermines its own policy Transport and Highways policy T1 and is unsound.

Although shown on accompanying drawing in earlier versions, there was no prior textual mention of Foundry industrial estate (next to Eldon Way) for redevelopment until current CS 2009 Submission. This was stated to be a typing error, but does not inspire confidence in reliability of drafting.

Revise both 2009 Core Strategy and 2009 HAAP Issues/options

Chapter 12: Retail/Town centres

The Core Strategy misrepresents findings of the Retail and Leisure Study 2008.

Para.12.38 The Core Strategy states (para.12.38) "The Retail & Leisure Study indicates Hockley has great potential. Hockley has been identified as having a need for additional convenience floorspace."

Whereas the R&LS actually states:

1) (10.26) "the scale of need does not lend itself to a foodstore capable of retaining a significant proportion of main food shopping expenditure".

2) (10.28) "There is no immediate capacity for additional floorspace".

3) (10.29) "we recommend focus be maintained on developing Hockley's existing strengths, rather than retail expansion"

4) 10.31 "the current nature of Hockley does not lend itself to classification as a 'town centre' as defined by PPS6. Moreover, we have identified that it has a very small catchment population. Accordingly, the council may wish to consider reclassifying Hockley from a town centre to a district centre".

Defer whole of proposals for Hockley town centre to Hockley Area Action Plan.

The Council will work with landowners and its partners to deliver the HAAP.

Remove threat of compulsory purchase orders.

Core Strategy Submission Document

O - 16724 - 7834 - Local Lists, 5.17 - i

16724 Object

CHAPTER 5 Local Lists, 5.17

One doesn't perceive impartiality when the Planning Director replies to local HAAP survey with "The affluent people of Hockley are entitled to famous name shops".

Chapter 5: Character of Place and Local Lists

Para.5.4 "Rochford district has unique character..stems from traditional buildings..still dominate towns and villages".

Para.5.17 "Council believes many buildings..are of local distinctiveness..part of..cherished local scene".

This only applies to favoured places: Rochford, Rayleigh, greenbelt villages. Many Hockley conservable items have been systemically removed for supposedly lucrative development in face of widespread protect. This is for supposed need for housing. In fact heritage items have been replaced by dwellings most cannot afford, and/or are hard to sell due to unsuitability of massing and siting. Many other homes are jeopardised by this practice.

HAAP issues 2009. Core Strategy 2006, 2007,2008, SCI.2006

Fewer 'vested interests', more even handedness. No more pressing people out of businesses, homes for expediency.

A CPRE Fieldwork issue extolled Local Lists, citing refusal of 16 flats to replace character house, not on local list. Inspector said house, facade made a contribution to area character, even if English heritage decided it didn't warrant listing. Council worked to get the house grade listed and even made adjacent area conservation one.

Hockley had one such on a "significant site" faced with 13 flats. Ward Member omitted house from refusal proposal, so house could be demolished. RDC dropped Local List ahead of appeal: "Government frowned on such Lists" (Other LAs, unaware of supposed directive retained theirs. After demolition RDC restored Local Lists, saying Government now support them. When Inspector queried the complaint, the then policy officer said "just politics, lot of local interest, nothing of character in the area[!]. (A dozen such items had been removed). Some "distinctive" Hockley buildings are still condemned (in Greensward Lane., others threatened (Spa Road). Whereas a modest hue and cry in Rayleigh will usually result in a building being saved.

Conclusion

Core Strategy Submission DPD is basically unsound in many respects

Incomplete information. Amongst others, it refers to Hockley AAP, the first stage of which is complete, but not other three. Rochford AAP first stage has been published in arrears of Core Strategy Submission. Rayleigh AAP is still awaited. Precise housing sites are absent, as Urban Capacity Study 2007 has been superseded by Strategic Housing Land Availability Assessment, not yet published. Traders, residents, are thus responding to Core Strategy Submission with incomplete information.

Lack of community involvement. Chapter 1, Introduction, para. 1.11 "Community involvement is an essential part of the plan making process".

In Statement of Community Involvement 2006 Rochford RDC "recognises need to enable people to have their voices heard".

Re Public Meetings: "Consideration will be had to timing and venue to ensure meeting is as accessible as possible".

Take Hockley Area Action Plan as an example of the opposite of all this:- Presentation of document was at Hullbridge, 7.30pm. It was also discussed with JAAP at Rochford Freight House (for traders only) at 7am, without publicity. Excuse made: HAAP on RDC website, which none will seek unless knowing it is there. Rochford District Matters newsheet had minute articles on p.3, half way through consultation period. Another excuse: a 2nd presentation by Hockley Residents Association with planning officer present: only because of complaints, and it is not the HRA's responsibility to RDC's job. Due to unavoidable haste of calling meeting, few knew and only 50 were present.

In Core Strategy Submission Hockley Parish Plan has been ignored. Proposals also ignore 95% rejection rate response to HAAP 2009, which included proposals for Eldon Way employment site.

Unfettered right of developers to carry on as if Core Strategy didn't exist. In PPS 12, Ch.4.6 states: "Core Strategies should be flexible and able to show how they handle contingencies". Several large planning applications have been submitted proposing developments outside the Core Strategy which does not indicate how such applications will be handled and does not comply with PPS 12.

Where are we? Finally, at Chapter 1, Introduction, para. 1.24: "the Core Strategy will have to be reviewed in the event of a new Local Area Agreement, post-2011, setting different priorities". So what purpose does all this work serve? So we have hardly finished this exercise, before it all starts again?

Full Text:

Ch. 4 Housing; Ch.10 Transport, Highways; Ch.11 Economic Development; Ch.12 Retail/town centres; Ch.5 Character of place & Local Lists

Chapter 4: Housing

Para 4.8 States sustainability underlines any decisions on housing location, primarily: current and future deliverability of infrastructure, eg roads, services, public transport, health.

Policy H1, Para.4.14 Some employment sites are considered more suitable for other uses (eg housing) including Eldon Way/Foundry, Hockley. This is all open to question.

Hockley-re Eldon Way/Foundry

In CS Preferred Options 2008 policy H2

N.E.Hockley was discarded as a housing option - whilst close to centre, station, "impact on highway network from traffic heading through Hockley...along Ashingdon Road..renders location unviable". Clearly the same principle applied to Eldon Way/Foundry for the same reasons.

Need to be logical and even-handed in proposals

June 2009 issue C S Submission issue says Eldon Way will be used for housing, whereas Sept.2009 issue says "alternative uses, including residential.." to be decided by HAAP (Issues consultation done, Pref.Options issue awaited, but judging from JAAP Pref.Options decision - namely biggest option chosen against overriding opposition, it will be housing).

Policy H1, T1 Proposals for moving employment to out of town locations, at either end of the district, with no existing public transport links, are contrary to government policy PPG14 & PPS1. it also contravenes the Core Strategy's stated aims of reducing carbon emissions; reliance on car transport and providing "an integrated network of cycle paths",

The Core Strategy also contravenes its own policy T1 and is unsound.

Health services GP surgeries are full and a PCT health centre will not occur in the foreseeable economic climate.

Ch.10: Highways and Transport

Policy T1, T2 RDC proposes working with ECC Highways, developers, but admits it has no authority, responsibility here. RDC will seek developer contributions, but this is neither detailed nor costed in CS Submission nor HAAP, and contravenes PPS 12.3 para.4.93 which states "The infrastructure planning process should identify as far as possible infrastructure needs and costs". Idea of paying for road & transport improvements through Standard Charges is unproven and unsound.

Establish like motorways with wholesale demolition.

In neither CS Submission nor HAAP is there any highways improvement, except idea to replace Spa roundabout with traffic lights and 1 way system up Southend Road and Hockley Rise.

RDC are proposing to scatter housing across the district in around 12 or sites but no detailed consideration has been given to the implications for highways across the District. Many roads across the District are at or near capacity but no modelling has been undertaken to determine the impacts.

It is clear that (i) the combined impact of scattering houses across the District and (ii) relocating Eldon Way/Foundry Industrial Estates with no public transport services will exacerbate existing problems. It is clear that the extent of improvements required is both unknown and not funded and the proposal is unsound.

Para.10.5

Policy T3, CLT1 Appendix CLT1

T1 & T2 "...highway improvements serving new developments..in a timely manner..ensuring developments delivered alongside necessary infrastructure".

These improvements cannot possibly be delivered. It should be realised: B1013 (Southend Rd), Rectory Road Hawkwell, Ashingdon, West Rochford - all in area proposed for large new developments are former winding, narrow country roads, tarmacked over for motorised traffic. Large housing increments are unsustainable off these roads, which

16765 Object

CHAPTER 5 Local Lists, 5.17

cannot be altered without much destruction.

Public transport RDC admits this is in the private sector. In Hockley, operator has cut No 7 service to one per hour from Ashingdon Schools, claiming it is unviable beyond. This is unlikely to change as Hockley is car dependant. No 8 bus through Hawkwell is cut to one per hour to Rayleigh, for same reason as No 7. Proposed planning agreements with developers can't run: e.g., a community centre or classroom given by a developer remains once he has moved on - how can that apply for an on-going bus service?

Ch.11 Economic development

Policy ED3 Core Strategy preferred Options 2008 hinted at possible housing in Eldon Way site. June 2009 Submission version, without consultation, said Eldon Way would be housing (map included Foundry, not the text). September 2009 Submission said redevelopment would be in HAAP (which apart from the Issues/Options version, is unfinished. Judging from results of JAAP Preferred Options where biggest option is chosen, though most respondents were against it, site will be housing, without consultation.

Para.1.25 Para.11.32

Policy ED4 T1 & T2 Note CH.1 Introduction to CS Submission 2009 para.1.25 East England Plan requires 3000 additional jobs, presumably to 2021. Revised Southend Airport is expected to drive Economic development. But at para. 11.32 Eldon Way-Foundry estate is planned to be more suitably utilized. "...alternative land will be required to accommodated employment uses so displaced" - ie jobs sent to eg new site near Southend Airport - not new jobs.

Remove compulsory relocation

Policy states Council will allocate 18ha of land to make up for de-allocations in ED3 - that proves point above.

Proposals for moving employment to out of town locations with no existing transport links are contrary to government policies PPG4, PPS1 and PPS4 and Core Strategy Policy T1.

Evidence Base is ignored by contravening Hockley Parish Plan 2007 and ignoring residents' views on HAAP Issues/Options. Next stage of HAAP Preferred Options is pre-empted and rendered irrelevant.

Core Strategy plans to relocate Eldon Way Foundry estate to Greenfield site with no nearby bus or railway. RDC plans to upgrade the nearest road to dual carriageway, though the connecting B1013 (through Hockley) will stay single, said by ECC Highways statistics to be 72% capacity. Airport bosses and council cannot suggest there will be no traffic growth from JAAP and new industrial site.

Revise both 2009 Core Strategy and 2009 HAAP Issues/options

Move to new industrial site near airport contravenes PPS4:

EC7.3C "out of centre sites, with preference given to sites..well served by choice of..transport and..close to centre and..high likelihood of forming links with centre". There is no current public transport and links with centres is unlikely".

EC 7.5.1 "whether the site is or will be accessible and well served by choice of transport, public transport, walking and cycling, as well as by car..". Remote location, narrow busy B1013 makes the site unsuitable for access by cycle or on foot.

It also contravenes PPS1 (27vii).. "reduce need to travel, encourage accessible public transport provision to secure more sustainable patterns of transport..Planning should actively manage patterns of urban growth to make fullest use of public transport and focus development in existing centres, near to major public transport interchanges". Core Strategy undermines its own policy Transport and Highways policy T1 and is unsound.

H1 & RTC6 Although shown on accompanying drawing in earlier versions, there was no prior textual mention of Foundry industrial estate (next to Eldon Way) for redevelopment until current CS 2009 Submission. In recent amendment to the CS this was stated to be due to a typing error!

Chapter 12: Retail/Town centres

The Core Strategy misrepresents findings of the Retail and Leisure Study 2008.

Defer whole of proposals for Hockley town centre to Hockley Area Action Plan.

Para.12.38 H1 & RTC6 The Core Strategy states (para.12.38) "The Retail & Leisure Study indicates Hockley has great potential. Hockley has been identified as having a need for additional convenience floorspace."

Whereas the R&LS actually states:

1) (10.26) "the scale of need does not lend itself to a foodstore capable of retaining a significant proportion of main food

Core Strategy Submission Document

O - 16765 - 14229 - Local Lists, 5.17 - i, iii

16765 Object

CHAPTER 5 Local Lists, 5.17

shopping expenditure".

2) (10.28) "There is no immediate capacity for additional floorspace".

3) (10.29) "we recommend focus be maintained on developing Hockley's existing strengths, rather than retail expansion"

4) 10.31 "the current nature of Hockley does not lend itself to classification as a 'town centre' as defined by PPS6. Moreover, we have identified that it has a very small catchment population. Accordingly, the council may wish to consider reclassifying Hockley from a town centre to a district centre".

Remove threat of compulsory purchase orders.

The Council will work with landowners and its partners to deliver the HAAP.

Chapter 5: Character of Place and Local Lists

Para.5.4 "Rochford district has unique character..stems from traditional buildings..still dominate towns and villages".

Para.5.17 "Council believes many buildings..are of local distinctiveness..part of..cherished local scene".

This only appears to apply to certain places: Rochford, Rayleigh, greenbelt villages. Many Hockley conservable items have been systemically removed for supposedly lucrative development in face of widespread protect. This is for supposed need for housing. In fact heritage items have been replaced by dwellings most cannot afford, and/or are hard to sell due to unsuitability of massing and siting. Many other homes are jeopardised by this practice.

Conclusion

Core Strategy Submission DPD is basically unsound in many respects:

Incomplete information. Amongst others, it refers to Hockley AAP, the first stage of which is complete, but not other three. Rochford AAP first stage has been published in arrears of Core Strategy Submission. Rayleigh AAP is still awaited. Precise housing sites are absent, as Urban Capacity Study 2007 has been superseded by Strategic Housing Land Availability Assessment, not yet published. Traders, residents, are thus responding to Core Strategy Submission with incomplete information.

Lack of community involvement. Chapter 1, Introduction, para. 1.11 "Community involvement is an essential part of the plan making process". In Statement of Community Involvement 2006 Rochford RDC "recognises need to enable people..to have their voices heard".

Re Public Meetings: "Consideration will be had to timing and venue to ensure meeting is as accessible as possible".

Hockley Area Action Plan as an example of the opposite of all this:- Presentation of document was at Hullbridge, 7.30 p.m. It was also discussed with JAAP at Rochford Freight House (for traders only) at 7 a.m., without publicity. Excuse made: HAAP on RDC website, which none will seek unless knowing it is there. Rochford District Matters newssheet had minute articles on p.3, half way through consultation period. Another excuse: a second presentation by Hockley Residents Association with planning officer present: only because of complaints, and it is not the HRA's responsibility to RDC's job. Due to unavoidable haste of calling meeting, few knew and only 50 were present.

In Core Strategy Submission Hockley Parish Plan has been ignored. Proposals also ignore 95% rejection rate response to HAAP 2009, which included proposals for Eldon Way employment site.

Unfettered right of developers to carry on as if Core Strategy didn't exist. In PPS 12, Ch.4.6 states: "Core Strategies should be flexible and able to show how they handle contingencies". Several large planning applications have been submitted proposing developments outside the Core Strategy which does not indicate how such applications will be handled and does not comply with PPS 12.

Where are we? Finally, at Chapter 1, Introduction, para. 1.24: "the Core Strategy will have to be reviewed in the event of a new Local Area Agreement, post-2011, setting different priorities". So what purpose does all this work serve? So we have hardly finished this exercise, before it all starts again?

Summary:

"Rochford district has unique character..stems from traditional buildings..still dominate towns and villages".
"Council believes many buildings..are of local distinctiveness..part of..cherished local scene".

This only appears to apply to certain places: Rochford, Rayleigh, greenbelt villages. Many Hockley conservable items have been systemically removed for supposedly lucrative development in face of widespread protect. This is for supposed need for housing. In fact heritage items have been replaced by dwellings most cannot afford, and/or are hard to sell due to unsuitability of massing and siting. Many other homes are jeopardised by this practice.

Full Text: ROCHFORD LOCAL DEVELOPMENT FRAMEWORK
CORE STRATEGY SUBMISSION DOCUMENT

Thank you for your letter dated 21 September 2009 consulting English Heritage on the above document. Our comments are set out below.

CHAPTER 4 HOUSING

Vision and objectives

While we note that character of place is addressed in chapter 5, it is important that this consideration is recognised as relevant within the Housing chapter. Paras 2.33, 2.69 and 2.73 also recognise the importance of character and sense of place in the built environment. We recommend that this consideration should be integrated into the vision and objectives for housing in order to improve the clarity of the plan, and its consistency with advice in PPS1.

Recommendation:

The following amendments are suggested:

- Vision in five years: add 'settlement character' after 'infrastructure'
- Vision by 2025: add 'and places' after 'communities' in bullet 1
- Objectives: In objective 2 amend to '...sustainable locations, enhancing sense of place and having regard to..'
- Para 4.19: Amend bullet 5 to read 'The historical, agricultural and ecological value of land, and settlement character'

CHAPTER 5 CHARACTER OF PLACE

We strongly support this section and policies CP1, CP2 and CP3. In the absence of policy coverage for listed buildings and scheduled monuments we recommend that para 5.9 should refer to PPGs 15 and 16, as well as draft PPS15.

CHAPTER 8 ENVIRONMENTAL ISSUES

We welcome the references the historic environment in the objectives and in policies ENV1 and ENV2.

Policy ENV6 Large Scale Renewable Energy Projects

We consider that this policy should refer to the historic interest of sites to reflect the advice in PPS22 more appropriately.

Recommendation: amend the first bullet in policy ENV6 to read '...it's ecological, historic or landscape value...'

CHAPTER 11 ECONOMIC DEVELOPMENT

Policy ED2 London Southend Airport

We understand that the grade I listed church in the vicinity of the runway will be protected in any proposals for expansion of the airport and the Core Strategy policy does not suggest otherwise. We will respond to the detail of proposals for the airport through responses to consultations on the Joint Area Action Plan and any planning applications.

In the interests of clarity, the above comments where we suggest changes to the Core Strategy should be recorded as objections to the soundness of the plan in terms of consistency with national guidance. However, we hope that it will be possible to agree amendments on these points prior to the public examination.

We would be happy to discuss any of these comments if you would find this useful.

Summary: CHAPTER 5 CHARACTER OF PLACE

We strongly support this section and policies CP1, CP2 and CP3.

Full Text:

LDF - Preferred Options - Rayleigh conurbation.

On behalf of Rawreth Parish Council I confirm that this letter is a formal response of objection to the final draft of Rochford District Councils Core Strategy Preferred Options document.

Firstly, at no time has the Parish of Rawreth been included or mentioned in any "Tier" on page 33 of the document, the criteria for allocation of houses - within the Core Strategy. If it had been included it should have been in Tier 4 and this is, therefore, UNSOUND.

The Parish Council believes that to develop 550 houses in one place within area no: 144, land to the north of London Road and then to add a further 220 to the Rawreth Industrial Estate area will totally destroy the character and rural outlook of Rawreth and surrounding areas. It will destroy the residents' "strong sense of identity within their own settlement" and is, therefore, UNSOUND.

The huge development of 550 houses is totally unacceptable. The land north of London Road is good quality agricultural land which is protected by the Green Belt -GB1 - fulfils all purposes under PPG2 and should be retained as such. Once used for development this land can never be returned to agricultural use, and if you continue to erode into our Green Belt and farmland it will be lost forever.

The Parish Council believe a proportion of the houses required to be built in our area should compliment and enhance Rawreth, cause as little extra congestion to our already heavily overcrowded roads as possible and provide a pleasant environment for those people wishing to move to the area. This particular area is part of the "Gateway to Rochford" and is the "strategic buffer" between Rayleigh and Wickford. Reference is made in the Core Strategy document to "avoiding coalescence" of villages/towns, however a development of this size immediately erodes the buffer between Rayleigh, Rawreth and Wickford, starts coalescence, destroys the rural character of Rawreth and, therefore, is UNSOUND.

The Core Strategy Document details Rochford District Councils priorities and objectives and details how the role of the Core Strategy features in achieving these. In support of the Parish Councils observations and alternative proposals they comment as follows.

Page 5 "Fostering greater community cohesion"

Development of land between Rawreth Lane and north of London Road will not give any community cohesion at all, it will simply be an extension to the west of Rayleigh giving residents no real sense of belonging, they will live within the Parish of Rawreth, yet they will be considered as living in Rayleigh as has been proved with other developments along Rawreth Lane such as Laburnum Way.

Page 12 "Priority 5 Essex roads are safer less congested and everyone has access to essential services"

The roads and infrastructure in the Rawreth area are completely full to capacity. The A127, A1245, A129 London Road, Rawreth Lane and Watery Lane just cannot take any more traffic and the proposed development on land to the north of London Road will increase traffic to a completely unsustainable level. On numerous occasions this year incidents within and on the outskirts of the Parish have brought traffic to a standstill for hours along London Road, Rawreth Lane, Watery Lane/Beeches Road and the Hullbridge Road. It took some residents 1 ¼ hours to proceed along Rawreth Lane and into Hullbridge - a distance of 1 1/2 miles.

The proposed development at the western edge of Hullbridge, which is, in fact, largely in Rawreth would also greatly increase the traffic problems in the area. Rawreth Parish Council understand there would be a proposal to "widen/straighten" Watery Lane/Beeches Road, with a roundabout at the junction with the Hullbridge Road. This is an extremely dangerous junction even at the present time and would become increasingly so. There is also the question of where the traffic would go when it reaches Battlesbridge at the Western end, it cannot possibly cross the Bridge as this is "restricted" and in a Conservation Area, therefore, it would have to turn left and proceed to the A1245 - a very dangerous junction.

Beeches Road/Watery Lane is also shown in the document as a new cyclist route. Surely this is a conflict of interest, a road widening/straightening proposal coupled with a cycle route.

Page 33 "Tier Settlements"

Nowhere in the Core Strategy Document is Rawreth Parish actually mentioned, it features in the "all other settlements tier 4" and is referred to as "land north of London Road Rayleigh" or "West Rayleigh" yet, the housing allocation of 550 dwellings between 2015 and 2021 and the 220 planned for the Rawreth Industrial Estate is the largest that any area is taking. Rawreth Parish currently has 380 dwellings and an electorate of 812, yet the proposed housing figures are set to increase the overall number of dwellings in the Parish by 203%.

Pages 34 to 36 "The efficient use of land for housing" and "Extensions to residential envelopes and phasing"

The Core Strategy Document states that "the Council recognises the importance of making best use of brownfield land" and "whilst the Council acknowledge that the housing requirement stipulated in the East of England Plan is a minimum, it must also be mindful of the need to maintain Green Belt as far as possible" yet the proposed 550 houses on the land

16474 Object

CHAPTER 6 Protection of the Green Belt, 6.6

north of London Road will all be built on Green Belt land of high agricultural value. The document states that "the Council will direct development to the most sustainable locations on the edge of settlements having regard to:"

"The potential to avoid areas of constraint (such as areas at risk of flooding, sites of ecological importance"

"The historical, agricultural and ecological value of land"

"The potential to create a defensible Green Belt Boundary and

"The avoidance of coalescence with neighbouring settlements"

Yet these key factors all seem to have been ignored when choosing the site to the north of London Road and, therefore, the proposal is UNSOUND. The Parish of Rawreth has a history of flooding, the land in Rawreth Lane will drain into the already overloaded brook system and the Services in the area would be unable to cope with this increase in housing - drains and sewers are already working to capacity. Heavy rain earlier in the year resulted in flooding in Watery Lane and the Rawreth Brook system has been very close to flooding twice already this year. During a meeting between the Parish Council and the Environment Agency we were advised that this situation will worsen with increased housing.

Page 42 "Gypsy and Traveller Accommodation"

This section details the need for an allocation of 15 pitches by 2011, it also states that they "will examine the potential of current unauthorised sites to meet this need" and that "sites will be allocated in the west of the District" The west of the District is in fact Rawreth, but yet again the Parish name has not been detailed. The Parish already has an unauthorised site which is the subject of an enforcement case and although well kept is on the brow of a hill on a main highway with restricted access which Essex County Council have already raised concerns about, this is not a site that should be considered as part of the requirement due to its location, but also, why is the allocation of all 15 pitches being detailed to one area?

Page 43 to 44 "Appendix 1"

Details of all the infrastructure to accompany residential development is listed, yet there are no detailed costs, have these been done? And are these achievable? Large numbers of housing in one area, as stated in the infrastructure requirements, will necessitate a new primary school. County figures suggest that there will be surplus places in Rayleigh schools even with new housing. Obviously these will be in the wrong parts of the town so increasing the risk that an existing school could close. It makes sense to spread the development in smaller sites around the town, avoiding closure and preventing unnecessary provision of a new school.

Page 57 "Strategies, Activities and Actions - The Green Belt"

The document states that "The Council will continue to support the principals of restricting development in the Green Belt, as set out in PPG2 and will preserve the character and openness of the Green Belt" it further states that "a small proportion of the District's Green Belt will have to have its designation reviewed to allow development" The entire development of 550 houses planned for land north of London Road is all on Green Belt land as is the land at Hullbridge, how does this equate to a "small proportion"?

The Councils own Policy GB1- Green Belt Protection states "The Council will allocate the minimum amount of Green Belt land necessary to meet the District's housing and employment needs" and that they will "direct development away from the Green Belt as far as is practicable and will prioritise the protection of the Green Belt land based on how well the land helps achieve the purposes of the Green Belt".

This area of land confirms all 5 purposes of the national PPG2 - Green Belt:-

It prevents the unrestricted sprawl of western Rayleigh

It provides a barrier to prevent the ultimate merging of Rayleigh, Rawreth and Wickford

It assists in safeguarding the countryside from encroachment

It preserves the setting and special character of historic towns

Assists in urban regeneration, by encouraging the recycling of derelict and other urban land

Rawreth Parish Council have observed that there are a number of sites that were put forward in the "Call for Sites" that are pre-used brownfield land in the Green Belt land, and as such would prove beneficial and in their opinion should have been considered for development. Their non-inclusion as "brownfield" sites makes the current proposals

UNSOUND:

Site No; 73 Hambro Nursery a site of approximately 3.93 hectares, coupled with the adjacent site Clovelly, would provide between 200 and 250 houses in an area of approximately 4.85 hectares this area would have good access directly from the A1245 and if expanded north westward to include land up to and around the Village Hall, approximately another 2.08 hectares could produce between 50 and 80 further houses. This area could be accessed either from the slip road (Chelmsford Road) to the south of the Nevendon Garage or from Church Road.

Both of these sites would remove the need for extra traffic along the A129 and Rawreth Lane which are both already operating well over maximum capacity. This development would require a footbridge for pedestrians, cyclists and horses over the A1245.

Rawreth Parish Council believe these proposals would be sensible infill of these areas and would be on "Brownfield" sites where current businesses are not particularly progressive and would not result in the loss of many jobs. Our figures are quite conservative and we believe that if these sites were chosen a much reduced number of houses would need to be built "North of London Road" on Green Belt land.

Phase 2 - With regard to the houses that are proposed for the Northeast corner of Rawreth/Hullbridge, the Parish Council are concerned that any development would cause considerable extra congestion to the immediate roads. We understand that the thoughts are to "straighten" and improve parts of Watery Lane and Beeches Road to provide access to and through Battlesbridge - a conservation area. Recent experience of deep flooding in Watery Lane with the road closed for several days on 3 occasions in the early part of 2009 proves that this proposal is completely unsustainable. The local drainage systems simply cannot take the amount of run-off experienced now and with further development this

Core Strategy Submission Document

16474 Object

CHAPTER 6 Protection of the Green Belt, 6.6

would increase the problem.

If this development is to go ahead, the Parish Council believe that a relief road should be built, from the end of Watery Lane, skirting to the west of the Rayleigh Park Estate, crossing Rawreth Lane at a mini-roundabout and entering a vastly improved A129 at approximately Lower Barn Farm. This would take any necessary traffic in and out of the area efficiently.

The Parish Council further believe that the Michelins Farm site No: 49 would be an ideal site for the Rawreth Industrial Estate. This would adjoin proposed industrial sites within the Basildon District and would provide excellent road and transport links. Rawreth Parish Council also proposed that the land opposite Michelins Farm could be used to re-site the illegal Gypsy/Traveller site that is currently situated on the busy A1245. The land opposite Michelins Farm would not only be a much safer site for Gypsy/Traveller pitches, but the correct use of the land would also ensure the environmental improvement of the site as a whole.

All of the above proposals were submitted to Rochford District Council, but they were not taken into consideration in the final draft resulting in the predominant use of Green Belt land for development, bounded by already congested roads and, therefore, the proposals are UNSOUND.

Summary:

Page 57 "Strategies, Activities and Actions - The Green Belt"

The document states that "The Council will continue to support the principals of restricting development in the Green Belt, as set out in PPG2 and will preserve the character and openness of the Green Belt" it further states that "a small proportion of the District's Green Belt will have to have its designation reviewed to allow development" The entire development of 550 houses planned for land north of London Road is all on Green Belt land as is the land at Hullbridge, how does this equate to a "small proportion"?

The Councils own Policy GB1- Green Belt Protection states "The Council will allocate the minimum amount of Green Belt land necessary to meet the District's housing and employment needs" and that they will "direct development away from the Green Belt as far as is practicable and will prioritise the protection of the Green Belt land based on how well the land helps achieve the purposes of the Green Belt".

This area of land confirms all 5 purposes of the national PPG2 - Green Belt:-

It prevents the unrestricted sprawl of western Rayleigh

It provides a barrier to prevent the ultimate merging of Rayleigh, Rawreth and Wickford

It assists in safeguarding the countryside from encroachment

It preserves the setting and special character of historic towns

Assists in urban regeneration, by encouraging the recycling of derelict and other urban land

Rawreth Parish Council have observed that there are a number of sites that were put forward in the "Call for Sites" that are pre-used brownfield land in the Green Belt land, and as such would prove beneficial and in their opinion should have been considered for development. Their non-inclusion as "brownfield" sites makes the current proposals UNSOUND:

Change to Plan

Site No; 73 Hambro Nursery a site of approximately 3.93 hectares, coupled with the adjacent site Clovelly, would provide between 200 and 250 houses in an area of approximately 4.85 hectares this area would have good access directly from the A1245 and if expanded north westward to include land up to and around the Village Hall, approximately another 2.08 hectares could produce between 50 and 80 further houses. This area could be accessed either from the slip road (Chelmsford Road) to the south of the Nevendon Garage or from Church Road.

Both of these sites would remove the need for extra traffic along the A129 and Rawreth Lane which are both already operating well over maximum capacity. This development would require a footbridge for pedestrians, cyclists and horses over the A1245.

Rawreth Parish Council believe these proposals would be sensible infill of these areas and would be on "Brownfield" sites where current businesses are not particularly progressive and would not result in the loss of many jobs. Our figures are quite conservative and we believe that if these sites were chosen a much reduced number of houses would need to be built "North of London Road" on Green Belt land.

Full Text: Representations on behalf of Fairview New Homes

1. We are instructed by our client, Fairview New Homes, to submit comments on the published Core Strategy Submission Document. For ease specific reference has been made in accordance with the paragraph and policy numbers as contained in the published document. We would like the opportunity to represent our Client at the forthcoming Examination of the Core Strategy DPD and would be grateful for confirmation that this is possible.

2. Fairview New Homes have an interest in a parcel of land to the South West of Rayleigh Town Centre, as indicated on the attached site location plan. This land was previously identified in the Core Strategy Preferred Options documents to provide an urban extension to the south west of Rayleigh. This option has now been withdrawn in the Core Strategy Submission document and it is on this basis these representations are provided to the Council.

3. The Submission Core Strategy has been considered against the requirements set out at Paragraph 4.36 of PPS12 requiring core strategies to be justifiable and effective in order to be found sound, as follows:

Justified:

- i. Founded on a robust and credible evidence base
- ii. The most appropriate strategy when considered against the reasonable alternatives

Effective:

- i. Deliverable - the Core Strategy should show how the vision, objectives and strategy for the area will be delivered and by whom, and when, including who is responsible for implementing different elements of the strategy and when
- ii. Flexible - a strategy is unlikely to be effective if it cannot deal with changing circumstances. Plans should show how they will handle contingencies.
- iii. Able to be monitored - monitoring is essential for an effective strategy and will provide the basis on which the contingency plans within the strategy would be triggered.

4. To summarise our comments, Fairview New Homes strongly object to the Core Strategy as is currently presented on the basis the document is currently unsound for a number of reasons:

â€¢ The lack of robust and credible evidence base

â€¢ Failure to clearly discount reasonable alternatives

â€¢ The effectiveness of the plan is also considered to be flawed and the Council's approach to deliverability and flexibility is questioned.

5. Fundamentally, we question the soundness of the Core Strategy due to the lack of available evidence to support the choices made by the Council. In particular, there is a strong reliance on the findings of the 2009 Strategic Housing Land Availability Assessment (SHLAA) although it is understood this document is not due to be published for consideration alongside the Core Strategy. We, therefore, reserve the right to submit additional comments to the Core Strategy consultation following the publication of the SHLAA.

6. The 2009 SHLAA is clearly listed at Paragraph 1.29 of the submission Core Strategy as one of the evidence base documents the Council have drawn upon when drafting the Core Strategy. The documents listed are all considered to have played an important role in informing the Core Strategy. PPS12 also recognises at Paragraph 4.37 the importance of demonstrating how choices made in the plan are backed up by factual evidence identified in evidence base documents.

7. As a starting point it is important to state it is Fairview New Homes greatest concern there is no background provided within the Core Strategy document, or indeed any of the available evidence base documents, identifying why the Local Planning Authority has chosen to remove some of the sites previously proposed for housing development. In addition, there is also no justification as to why the retained urban extension sites are more suitable than those removed from the draft plan.

8. The following provides specific comments in response to the relevant areas of the Core Strategy.

Housing

9. It is stated at Paragraphs 4.10-4.12 that the Council have adopted a balanced approach when locating new housing between higher tier settlements and lower tier settlements. Although there is no detail provided as to how the Council

16615 Object

CHAPTER 6 Protection of the Green Belt, 6.7

intend on implementing this balanced approach or how the strategic allocation of housing contributes to the balance required. Our Client cannot support this approach until further detail is understood as to the proportion of housing being allocated to each settlement tier.

10. The proposed distribution of housing development during the plan period does not appear to be proportionately allocated between the various settlement tiers. We would argue that development should be distributed proportionately in line with the size of the settlement in order to benefit for available services and facilities. Rayleigh recognised as having best access to services within the district at Paragraph 2.68 of the Core Strategy. On this basis it is considered the development should primarily be directed to Rayleigh with a proportionate level of housing to the remaining settlements in the District.

Policy H1 - The efficient use of land for housing

11. In general the use of residential extensions to meet the remaining housing requirement that cannot be delivered through the redevelopment of appropriate previously developed land is supported by Fairview New Homes.

12. It is understood there is a need to prioritise use of brownfield land in line with national policy requirements but this needs to be a carefully balanced and realistic approach in identifying appropriate urban extensions to accommodate the majority of the District's housing, as identified in the table at Paragraph 4.6 and later at Paragraph 4.15.

13. Policy H1 sets out that the Council will seek the redevelopment of Rawreth Lane Industrial Estate, Foundry Industrial Estate, Stambridge Mills and Star Lane Industrial Estate. Without sight of the 2009 SHLAA it is not possible to understand whether the Council's choice to release employment land for housing is appropriate and Fairview New Homes cannot, therefore, support this element of Policy H1. This objection is further amplified by the fact additional employment land is required but is yet to be identified.

Policy H2 - Extensions to residential envelopes and phasing

14. The Council's intention to provide a balanced strategy for housing provision is mentioned again at Paragraph 4.18. The comments made at Paragraphs 9 and 10 above are also relevant in this respect.

15. In comparing the Preferred Options Core Strategy Document and Submission Core Strategy Document there is a significant reduction in the number of housing units being provided in urban extensions pre 2015, from 1450 dwellings to 775. From discussions with the Local Planning Authority it is understood the Council are seeking to provide the District's housing requirements by increased development densities. From the evidence available in the Submission Core Strategy and summary of SHLAA sites a number of the sites identified as urban extensions have in fact been allocated a reduced number of dwellings, including the land to the north of London Road, Rayleigh. We would, therefore, consider the approach taken by the Local Planning Authority to provide the required level of housing is untenable and unjustified.

16. In discounting preferred options PPS12 makes clear at Paragraph 4.38 the requirement for Local Planning Authorities to consider and evaluate reasonable alternatives. As set out above, the choices the Council have pursued have not been substantiated and without the consideration of reasonable alternatives the Core Strategy cannot be considered justified and therefore unsound.

17. However, this is our opinion based only on discussions with the Local Planning Authority rather than a thorough evidence base and we will consider the evidence in detail when it become available and provide further comment.

18. Paragraph 4.19 of the draft Core Strategy details the Council's primary factors in determining the location of future urban extensions. It is presumed the Council have assessed each of the proposed urban extension sites against the following criteria and that this information is contained within the SHLAA, although we have not been provided with any evidence of this to assess. It can be demonstrated that the land identified on the attached site location plan meets all of the requirements set out below.

â€¢ The proximity and relationship to existing centres, facilities, services

â€¢ The availability of infrastructure and/or the potential for additional infrastructure to be provided for development in such areas

â€¢ The potential to reduce private car dependency

â€¢ The potential to avoid areas of constraint (such as areas at risk of flooding, sites of ecological importance, public safety zone etc)

â€¢ The historical, agricultural and ecological value of land

â€¢ The impact on highway network (including availability and impact on existing network, as well as potential for improvements to be delivered)

â€¢ The relationship of development locations to the District's area of employment growth

â€¢ The potential to create a defensible Green Belt boundary

â€¢ The avoidance of coalescence with neighbouring settlements

19. In summary, Fairview's land is sustainably located in particularly close proximity to Rayleigh Town Centre and train station. In addition, the location of the land provides a natural extension and rounding of settlement boundary. An extension to Rayleigh in this location offers no opportunity for coalescence with neighbouring settlements nor does it constitute urban sprawl.

16615 Object

CHAPTER 6 Protection of the Green Belt, 6.7

Policy H2 - Extensions to residential envelopes and phasing

20. Although it is stated a flexible approach to the timings of the release of land will be maintain no explanation is provided as to why some sites are considered suitable for development pre 2015 and others post 2015. Paragraph 4.22 elaborates further to state a number of factors have been considered when determining the phasing of strategic housing sites although this information is not clearly available to assess.

21. As stated above the principle of releasing certain areas of greenbelt land is considered the best approach to meeting the Council's housing provision requirements. However, Fairview New Homes object to the omission of the land to the South West of Rayleigh for housing development as previously identified in the Core Strategy Preferred Options document. The site identified on the attached site location plan has been assessed against the Council's criteria, as set out at Paragraph 18 above and each requirement can be met. Without any clear explanation as to why this site has been discounted and the only other strategic housing site identified in Rayleigh is located further away from Rayleigh Town Centre and the associated services and facilities including the train station, Fairview New Homes object to Policy H2.

22. As considered at the outset of these representations the draft Core Strategy cannot be considered robust, and therefore sound, without clear justification and evidence base.

Policy H3 - Extension to residential envelopes post-2021

23. Policy H3 is supported on the basis that the release of greenbelt land is required for housing and this is the most appropriate approach to meet the Council's housing requirements, as set out at Paragraph 21 above.

24. However, it is unclear why some of the sites previously identified for housing development pre 2015 up until 2021 in the Preferred Options Core Strategy document have now been allocated for development post 2021, such as South East Ashingdon. It is stated at Paragraph 4.24 of the Submission Core Strategy document those areas identified for post 2021 development may not be immediately deliverable. However, there is no information available to understand why these sites are now no longer considered suitable for pre 2015 development as they were in December 2008. As a result, Fairview New Homes consider Policy H3 to be unjustified and therefore unsound.

Affordable Housing

25. The acute need for additional affordable housing is recognised at Paragraph 4.30. It is unclear from the draft Core Strategy document exactly how much affordable housing is required in the District in the plan period.

26. However, taking the starting point as set out at Paragraph 4.30 that the Thames Gateway South Essex Strategic Housing Market Assessment requires 131 net additional affordable dwellings per year which constitutes 52% of the District's overall annual housing target. In order to achieve this target using the Council's proposed policy requirement that new housing developments are to provide 35% affordable housing, 375 new dwellings would need to be developed each year. This calculation does not account for those developments with fewer than 15 dwellings which have no requirement to provide affordable housing or developments which cannot viably afford to provide non-market housing.

27. An annual requirement of 250 dwellings is identified at Paragraph 4.2 of the Core Strategy which would leave a significant short fall of affordable housing and act to compound the current situation. The approach taken by the Council ultimately accepts there will always be a shortfall in affordable housing provision and does not seek to redress this. We do not, therefore, consider this to be a robust or justified approach to achieving affordable housing in the District.

28. It is, therefore, considered in order to meet the District's affordable housing requirement additional housing land should be identified in order to ensure a wholesale increase in housing provision to address the Council's shortfall in affordable housing and meet the targets set for the plan period. The most appropriate and effective method by which to secure affordable housing provision is through developing large sites that are viably able to offer affordable housing units.

29. During the consultation of the submission Core Strategy the Council's Housing Strategy (2009) was not available and we reserve the right to make further comment on this document following the publication of this evidence.

The Green Belt

30. It is fully accepted by the Council that the Green Belt boundary is currently too tightly drawn and the release of some Green Belt land is necessary to meet the District's development requirements. However, it needs to be demonstrated that the areas of Green Belt land to be lost are justified and located in the most appropriate area and that areas of release land do not undermine the principle of the Green Belt.

31. It is understood from Paragraph 6.7 of the Submission Core Strategy the Council will seek to examine the degree to which current Green Belt land is helping to achieve the purposes of the Green Belt when considering reallocating land. However, areas of Green Belt are proposed to be reallocated for urban extensions prior to this research being undertaken.

Core Strategy Submission Document

O - 16615 - 5219 - Protection of the Green Belt, 6.7 - i, ii

16615 Object

CHAPTER 6 Protection of the Green Belt, 6.7

32. Fairview New Homes fully support the justified retention of the areas of Green Belt where appropriate and the release of Green Belt land where needed. However, at present the proposed Housing policies and Green Belt policies are not coherent and the reallocation of certain areas of Green Belt is not based on a credible evidence base.

Environmental Issues

Policy ENV4 - Sustainable Drainage Systems (SUDS)

33. Fairview New Homes would like to support the flexibility contained within Policy ENV4 which recognises it is not always viably possible to incorporate SUDS in all developments.

Policy ENV8 - On Site Renewable and Low Carbon Energy Generation

34. We would also like to support Policy ENV8 on the same basis as Policy ENV4 in that it is important that the production of energy from renewable or low carbon sources is only required where it is viably possible so as not to resulting in developments not coming forward.

Transport

Policy T8 - Parking Standards

35. Fairview New Homes object to Policy T8 as it is currently contrary to National Policy requirements as set out in PPG13 which contains maximum parking standards. Indeed, this is recognised at Paragraph 10.27 of the Submission Core Strategy document. Enforcing minimum parking standards is not consistent with local or national sustainability aims and should not be an approach pursued by the Council.

Summary:

The Green Belt

30. It is fully accepted by the Council that the Green Belt boundary is currently too tightly drawn and the release of some Green Belt land is necessary to meet the District's development requirements. However, it needs to be demonstrated that the areas of Green Belt land to be lost are justified and located in the most appropriate area and that areas of release land do not undermine the principle of the Green Belt.

31. It is understood from Paragraph 6.7 of the Submission Core Strategy the Council will seek to examine the degree to which current Green Belt land is helping to achieve the purposes of the Green Belt when considering reallocating land. However, areas of Green Belt are proposed to be reallocated for urban extensions prior to this research being undertaken.

32. Fairview New Homes fully support the justified retention of the areas of Green Belt where appropriate and the release of Green Belt land where needed. However, at present the proposed Housing policies and Green Belt policies are not coherent and the reallocation of certain areas of Green Belt is not based on a credible evidence base.

Full Text: Agree that the minimum amount of Green Belt is allocated to meet the District's housing need, and that the extensions to the residential envelope are in sustainable locations, and prevent the coalescence of settlements.

In addition, some Green Belt land is less worthy of continued protection, as it does not necessary contribute as strongly to the reasons for maintaining it as Green Belt.

It is interesting to note that whilst the Council will continue a restrictive policy towards employment growth in the Green Belt; this appears to contradict Policy ED4 that advises that certain locations will be released to accommodate new employment sites to compensate for the loss of locations in the existing settlements.

Summary: Additional housing in Rawreth can be allocated on brown field sites within Rawreth. Extensive proposed housing on farmland should not be allowed. This is also totally out of scale with the village of Rawreth

Change to Plan Sites have been put forward within the centre of Rawreth on brown field sites. New housing should be on a scale that doesn't drastically alter the character of Rawreth. Sites within the village would not necessitate use of Rawreth Lane (already over used & congested) & are nearer Battlesbridge station. Small scale additional housing would be beneficial to Rawreth. A site where people can walk to the village hall and join in the social activities already existing should be considered.

Full Text: This Policy is far too weak to protect the Green Belt within the Rochford District. There appears to have been no overall review of the Green Belt boundaries or any reasoning why specific areas have been chosen for development. Why are these areas less worthy of protection? Under GB1 Risk Mitigation (p140) it states that protection of the Green Belt will be 'regulated' through the 'development management process'. This is not the way to protect the Green Belt; a Policy that has been respected and successful in its functions (as set out in PPG2) for many years.

Summary: Policy GB1 is unsound as the principles of PPG2 have not been adhered to. An overall review of the Green Belt should have carried out and boundaries firmly drawn so they can be maintained.

CPREssex wishes to see the Policy wording revised to bring it into line with PPG2.

Change to Plan CPREssex wishes to see the Policy wording revised to bring it into line with PPG2.

Full Text: Unsound: (i) not effective; not flexible

Whilst we understand the desire to allocate the minimum amount of green belt land necessary to meet the council's needs, the council must allow for the possibility that identified brownfield sites may/will not come forward at the anticipated rate, or may not come forward at all, therefore that more green belt release is required than currently identified. Drawing green belt boundaries tightly around what are perceived to be the minimum developable areas required to provide for the housing numbers identified in policies H2 and H3 for example, may lead to the need to review those boundaries again in the future, possibly several times, if there was found to be inadequate land supply.

This would add further to the uncertainty regarding the permanence of the green belt or the extent of development at these sites, and would not be good long term strategic planning.

Whilst we understand that revised green belt boundaries (or development boundaries for the identified urban extensions) will be determined via the Site Allocation DPD, this principle of minimum green belt release must be balanced against the issue we raise here.

Furthermore, we can confirm that as far as we are concerned, development of 550 units or more units (see our other representations) at land North of London Road, Rayleigh, can be accommodated without any coalescence to neighbouring villages or towns. There is a substantial gap between this site and the nearest town, Wickford, to the west, and we are committed to providing a strategic gap between any development and Rawreth Village. There would be more significant issues of coalescence to other parts of Rayleigh if urban extensions were considered there e.g. affecting Hullbridge to the north, Hockley to the north east, Eastwood to the east/south east, and Thundersley etc to the south.

Summary: The wording of this policy to be revised (recommended wording)

We would suggest that there would be capacity on land north of London Road to accommodate further housing (other and above that identified in the Core Strategy) without causing coalescence to neighbouring settlements, and that an appropriate boundary be set to reflect this.

Change to Plan The wording of this policy to be revised to state something like "however, green belt boundaries will be defined to enable possible further housing provision to be made at identified urban extensions, to allow for the possibility that other (brownfield) housing sites fail to deliver as anticipated in the Core Strategy or that required levels of housing supply are not being met".

We would suggest that there would be capacity on land north of London Road to accommodate further housing (other and above that identified in the Core Strategy) without causing coalescence to neighbouring settlements, and that an appropriate boundary be set to reflect this.

Full Text: ROCHFORD DISTRICT COUNCIL - LOCAL DEVELOPMENT FRAMEWORK CORE STRATEGY SUBMISSION
SEPTEMBER 2009

Icen Projects Ltd (Icen) has been instructed by Colonnade Land LLP (Colonnade) to submit representations to the Rochford Local Development Framework Core Strategy Submission (CSS).

a) Overview

It is our conclusion that the CSS is not justified, effective or consistent with national policy, as required by Planning Policy Statement 12: Creating Strong Safe and Prosperous Communities through Local Spatial Planning (PPS12) and is therefore vulnerable to being found unsound by an Inspector through the Examination in Public.

b) Background and Summary

These representations follow those made by Icen on behalf of Colonnade to the Preferred Options Core Strategy, submitted via letter dated 17 December 2008. In this regard, we would request that the Council confirms that the representations made to the Preferred Options Core Strategy will be taken into account alongside the current representations, particularly as there are a number of cross references between the two sets of representations.

It is not considered necessary to reiterate the content of the previous representations, as they were made at the appropriate stage and will be considered by the Planning Inspectorate in due course, but it is inevitable that certain elements will require restating where it is not clear that they have been taken into account in the production of the CSS. For clarity, therefore, Colonnade feel that it is appropriate to clarify the 'in-principle' issues that were raised in the representations to the Preferred Options Core Strategy, recognising that these issues were raised in the context of a wider and more coherent justification made within the representations:

- â€¢ Further cross-referencing of the recommendations made within the evidence base is required;
- â€¢ Greater focus should be placed on promoting Rochford as the principal settlement within the District;
- â€¢ Coombes Farm is the most logical location for residential development abutting the urban area of Rochford and as such warrants recognition as a general location for residential development;
- â€¢ The allocation of Three Ashes Farm for employment generating uses will be pursued;
- â€¢ Recognition that it is not realistic to expect residential allocations to be met mainly on Brownfield sites, nor should the intensification of smaller sites in residential areas be pursued;
- â€¢ Many of the sites identified as suitable for residential development will not be viable and will not come forward for development within the timescales anticipated;
- â€¢ The failure to provide the necessary justification for the proposed infrastructure improvements sought in Appendix H1;
- â€¢ The inclusion of an affordable housing exception policy was sought; and
- â€¢ The need to identify sites capable of delivering employment growth in the short term.

Following assessment of the CSS presented by the Council for consultation prior to submission to the Secretary of State, Colonnade considers the Plan to be 'unsound' as the document consistently fails to meet the tests of soundness set out in the table following Paragraph 4.52 of PPS12. For clarity, PPS12 confirms that to be 'sound' a Core Strategy should be JUSTIFIED, EFFECTIVE and consistent with NATIONAL POLICY and defines 'justified' as "founded on a robust and credible evidence base" and "the most appropriate strategy when considered against the reasonable alternatives" and 'effective' as "deliverable", "flexible" and "able to be monitored".

The rationale for the above is identified in the remainder of these representations, which are provided in the interests of ensuring the Council delivers a strong, robust and logical Core Strategy that guides the future development of the District in a justified and effective manner.

b) Colonnade

As the Council is aware from previous submissions to the Local Development Framework, Colonnade is a strategic land company with a particular interest in the future development of the District as a consequence of a number of sites that it controls, particularly around Rochford.

The Council will also be aware that Colonnade has recently submitted an outline planning application for the residential development of the land at Coombes Farm, Rochford to provide a sustainable urban extension comprising up to 326

16253 Object

CHAPTER 6 Policy GB1 - Green Belt Protection

residential dwellings, with associated accesses and community uses. Whilst the planning application process is clearly separate from the Local Development Framework production process, Colonnade wishes to continue the promotion of the site as a suitable location for residential development.

Accordingly, these representations focus on the legal requirements and tests of soundness associated principally with the Housing and Employment chapters of the CSS, with reference where appropriate to the sites that are controlled by Colonnade, the outline planning application at Coombes Farm and other issues where relevant.

c) Housing

i. Date of Adoption

The CSS assumes an adoption date of 2010 and plans for the provision of housing to 2025.

Taking account of the potential delays to the adoption of the Plan, including the Examination process, it would be more appropriate for the CSS to provide sufficient flexibility to allow for delays in its adoption. Colonnade considers an adoption date of 2011 for the CSS is a more realistic target.

Taking account of the advice in Paragraph 4.13 of PPS12, which states that the time horizon for the Core Strategy should be "at least 15 years from the date of adoption" it would be appropriate for the CSS to plan for the provision of housing to 2026 at the earliest. As such, Colonnade does not consider the CSS to be 'flexible' in the context of the tests of soundness in the table following Paragraph 4.52 of PPS12.

ii. Housing Delivery

However, setting the above aside, the Housing Chapter identifies the minimum housing delivery target for the period 2001 to 2021 of 4,600 dwellings as set out in the East of England Plan, with the annual average requirement of 250 dwellings per annum to extend provision from 2021 to 2025. It also confirms that the residual target for the period 2006 to 2021 is 3,790 dwellings, taking account of the delivery of 810 dwellings in the period 2001 to 2006, and a further 618 dwellings have been completed between 2006 and 2008.

This leaves a residual housing provision target of a minimum of 3,172 dwellings in the period 2008 to 2021. Taking into account the required provision beyond 2021, the residual housing provision target in the period 2008 to 2025 is a minimum of 4,172 dwellings. The disparity between these figures and those provided within the CSS are explained by the rounding down of the annual average delivery requirement in the period 2006 to 2021 to 250 dwellings per annum, compared with the actual figure of 252.67.

The table at Paragraph 4.6 of the CSS identifies the source of housing provision that will meet the identified minimum requirements and includes figures for 'Extant Planning Permissions' and 'Existing allocations/other appropriate sites identified in Strategic Housing Land Availability Assessment'. These figures, along with the actual completions within the period are combined to produce the figure for the 'Total without Green Belt release' figure.

Setting aside the concern regarding under-provision associated with the rounding down of the annual average delivery requirement in the period 2006 to 2021, the CSS fails to identify the sites that will contribute to the 'Extant Planning Permissions' provision. The identification of the sites that will contribute to the 'Extant Planning Permissions' should be provided in the context of the findings of the Inspector in the appeal by Asprey Homes [APP/G5180/A/07/2043219/NWF] who determined that the reliance on a delivery rate of 100% is unsafe [IR287].

Furthermore, at the time of writing these representations, the Strategic Housing Land Availability Assessment 2009 has not been published. It is impossible therefore for a full assessment of the proposed housing provision to be undertaken to confirm whether the CSS is 'founded on a robust and credible evidence base' [test of soundness in the table following Paragraph 4.52 of PPS12].

iii. Redevelopment of Employment Sites

Paragraph 4.14 of the CSS refers to the identification of the four employment sites that are considered by the Council to be suitable for redevelopment to residential use. However, the failure to publish the Strategic Housing Land Availability Assessment 2009 either before or alongside the publication of the CSS means that the assumptions made by the Council as to the suitability, availability, viability and deliverability of the sites cannot be assessed.

It has been necessary, therefore, to review the assumptions made in the Rochford Urban Capacity Study 2007 (UCS) regarding the sites. Within the section of the UCS entitled 'Redevelopment of Established Employment Land' [pages 22 & 23] includes a list of those sites assessed, their indicative capacities and the probability of residential development coming forward at the sites within the plan period (identified elsewhere as 2001 - 2021). The list includes the four sites identified in the CSS of Eldon Way/Foundry Estate, Hockley; Rawreth Lane Industrial Estate, Rayleigh; Stambridge Mills; and Star Lane Industrial Estate, Great Wakering.

In total, the UCS identifies an indicative residential redevelopment capacity of 486 units on the four sites (118, 220, 60 and 88 respectively). Of these, it identifies the Rawreth Lane Industrial Estate and Stambridge Mills as having a 'high'

16253 Object

CHAPTER 6 Policy GB1 - Green Belt Protection

probability of coming forward for development in the Plan period (2001 - 2021), which would deliver 280 residential dwellings using the Council's own figures. The Star Lane Industrial Estate (referred to in the UCS as the Star Lane Brickworks) is identified as having a 'medium' probability of coming forward for development in the Plan period, with capacity to deliver 88 residential dwellings. It is unclear, therefore, where the figure for 'Existing allocations/other appropriate sites identified in Strategic Housing Land Availability Assessment'.

Set against this is the identification of these four sites in the CSS as being capable of delivery for residential development within the Plan period, with 671 units delivered between 2006 and 2015 and a further 506 units between 2015 and 2021.

The UCS also states in the same section that:

"There are considerable areas of land in the district that are currently allocated for, and in use as, employment land. The redevelopment of such sites for residential use would reduce demand for residential development on greenfield sites, but would at the same time create a need for alternative sites to be found for employment. Such an approach, which would be likely to require the decontamination of existing employment land to make it fit for residential use, together with development of a greenfield site and implementation of additional infrastructure to serve the new employment area, may well be unsustainable." [our emphasis]

The UCS appears to confirm therefore, that not only would the redevelopment of the four sites listed in the CSS be unlikely within the Plan period, but also potentially unsustainable. In this regard, it is notable that the promoters of Stambridge Mills sought the Screening Opinion of the Council as to whether Environmental Impact Assessment of the planning application for the redevelopment of the site for residential use was required in 2007, but to date are yet to submit a planning application for the redevelopment of the site.

In light of this, Colonnade does not consider the CSS is 'the most appropriate strategy when considered against the reasonable alternatives' [test of soundness in the table following Paragraph 4.52 of PPS12], which include the provision of residential development in East Rochford.

iv. Strategic Housing Growth to the East of Rochford

Furthermore, whilst paragraph 2.62 of the CSS identifies concern relating to the identification of locations to the east of Rochford for development on the basis that 'vehicular movements would inevitably be directed through Rochford's historic core', the CSS later identifies Stambridge Mills as a suitable site for residential redevelopment.

In light of the evident conflicts between the evidence base provided in support of the CSS and the absence of other evidence, the CSS is not considered 'sound' in the context of the tests of soundness in the table following Paragraph 4.52 of PPS12.

v. Housing Trajectory

Paragraph 4.28 of the CSS confirms that policies H1, H2 and H3 of the CSS will deliver housing supply as illustrated in the Housing Trajectory at Appendix H2. This Housing Trajectory is transposed from the 2008 Annual Monitoring Report (AMR).

Whilst on the face of it, the Housing Trajectory appears to confirm that the Council can meet its requirement to identify a five year housing supply, many of the sites identified within the AMR do not conform to the guidance issued by CLG in August 2008, on the assessment of a five year land supply. The guidance identifies sites that can be included within the five year assessment of housing supply as:

"those that are allocated for housing in the Development Plan, sites that have planning permission (outline or full planning permission that has not been implemented) and specific, unallocated brownfield sites that have the potential to make a significant contribution to housing delivery during the 5 year period".

Table 4.10: Projected Net Completions of the AMR confirms that the five year housing land supply figure includes sites from 'other land allocated for residential purposes', which are based on land allocations outside existing settlements. However, it should be clarified that these land allocations are not currently allocated for housing development in an adopted Development Plan. As such, these unallocated greenfield sites that are yet to make significant progress through the planning system should be discounted and the five year housing land supply recalculated.

The table below has been prepared to confirm the extent of the shortfall should the sites from 'other land allocated for residential purposes' be removed from the calculation of the Rochford five year housing land supply, in accordance with the guidance issued by CLG:

Recalculated Five Year Housing Land Supply (2009 - 2014):

Year
1st April 2009 to 31st March 2010
Predicted Delivery (A)

Core Strategy Submission Document

16253 Object

CHAPTER 6 Policy GB1 - Green Belt Protection

106 dwellings
Allocations on 'other land allocated for residential purposes' (B)
0
Residual delivery (A-B)
106 dwellings
Delivery Shortfall
0

Year
1st April 2010 to 31st March 2011
Predicted Delivery (A)
217 dwellings
Allocations on 'other land allocated for residential purposes' (B)
150
Residual delivery (A-B)
67 dwellings
Delivery Shortfall
150

Year
1st April 2011 to 31st March 2012
Predicted Delivery (A)
544 dwellings
Allocations on 'other land allocated for residential purposes' (B)
300
Residual delivery (A-B)
244 dwellings
Delivery Shortfall
300

Year
1st April 2012 to 31st March 2013
Predicted Delivery (A)
395 dwellings
Allocations on 'other land allocated for residential purposes' (B)
375
Residual delivery (A-B)
20 dwellings
Delivery Shortfall
375

Year
1st April 2013 to 31st March 2014
Predicted Delivery (A)
300 dwellings
Allocations on 'other land allocated for residential purposes' (B)
300
Residual delivery (A-B)
0 dwellings
Delivery Shortfall
300

TOTAL

Predicted Delivery (A)
1,562 dwellings

Allocations on 'other land allocated for residential purposes' (B)
1,125 dwellings

Residual delivery (A-B)
437 dwellings

Delivery Shortfall
1,125 dwellings

The above table confirms that the removal of the 'other land allocated for residential purposes' from the calculation of the Rochford five year housing land supply leaves the Council with a minimum net additional housing delivery of 437 dwellings, which equates to a supply of 1.7 years based on the adjusted annual delivery target of a minimum of 255 net

16253 Object

CHAPTER 6 Policy GB1 - Green Belt Protection

additional dwellings per annum. As such, the Council is failing to meet its requirement to demonstrate a five year housing land supply in accordance with PPS3 and the supporting guidance provided by CLG. It is notable that the recent application by David Wilson Homes at Land between Main Road and Rectory Road and Clements Hall Way, Hawkwell identifies an even greater shortfall in the Council's five year housing land supply.

In addition to the above, the AMR does not include a commentary on how deliverability has been assessed against the requirements of paragraph 54 of PPS3.

Furthermore, the guidance from CLG confirms that the windfall sites cannot be relied upon in demonstrating a five year supply unless a Local Planning Authority can demonstrate genuine local circumstances exist to allow this exception. However, the second paragraph of the section entitled 'Housing Trajectory and Five Year Housing Supply' confirms that the estimated completions in the years 2008 to 2013 includes estimated yields through 'intensification' coming forward in future years. With reference to the definition of 'intensification' on page 13 of the AMR, it appears that the 'Housing Trajectory and Five Year Housing Supply' also includes provision for windfall sites. As such, the Council is required to demonstrate the 'genuine local circumstances exist to allow this exception'.

The pressures on delivery and need for additional sites are more acute when it is considered that an average delivery rate of 204 dwellings per annum was achieved during a strong period of housing market growth. In view of the current economic downturn, and significant problems faced within the housing market, the Council should seek to identify appropriate and deliverable sites to meet its regional housing target provision commitments. Suitable sites would include Coombes Farm, which has been positively promoted for development through the LDF process.

It may, therefore, be more appropriate for the Council not merely to allocate sufficient sites to meet the minimum targets set down by the East of England Plan, but to identify a reservoir of land capable of coming forward for development should the sites identified through the CSS and Allocations Development Plan Documents (DPD) fail to come forward for development within the anticipated timescales.

vi. Appendix H1

As set out in the representations to the Preferred Options Core Strategy, there is continuing concern that the list of improvements to infrastructure required in support of residential development as set out in Appendix H1 fails to provide the necessary justification for its inclusion. Whilst the preamble seeks to clarify why the infrastructure is sought, the inclusion of this list should be fully justified, otherwise it is of little value. Furthermore, it would be of benefit to provide further details of the existing community infrastructure provision and capacity within the evidence base.

The failure to provide the necessary justification for its inclusion means that the CSS will not be 'founded on a robust and credible evidence base' [test of soundness in the table following Paragraph 4.52 of PPS12].

d) Character of Place

As set out in the representations to the Preferred Options Core Strategy, Colonnade considers that, with respect to the requirement to produce and adhere to Development Briefs for large residential developments, as set out in Policy CP1, the Council should not seek to impose further demands on developers where existing regulations provide sufficient requirements regarding design. In this instance, Design and Access Statements provide sufficient design guidelines for developments and there is no additional information provided in the policy or supporting text that clearly sets out the justification for this requirement.

e) Green Belt

With reference to the comments regarding the redevelopment of employment sites under the 'Housing' section above and the requirement to allocate sufficient land to meet the minimum housing provision targets as required by the East of England Plan, Colonnade considers that the chapter on Green Belt, and policy GB1 in particular, fails to provide the necessary evidence base that will allow it to be monitored effectively.

It is inherent that the proposed redevelopment of previously developed employment sites for residential use in order to reduce the requirement to allocate previously undeveloped land for residential use will displace these employment uses. In turn, therefore, the separate allocation of previously undeveloped Green Belt to accommodate the compensatory employment provision is required. This is accepted in principle at paragraph 11.11 of the CSS.

Without providing clarification of the anticipated quantum of land required to accommodate the provision of housing and compensatory and new employment land, it is not possible to monitor the performance of policy GB1.

However, using the Council's figures in the table setting out the breakdown of the housing provision figures in Chapter 4 of the CSS (assuming that actual completions and extant permissions are all on previously developed land), setting aside the displacement of employment uses referred to above, approximately 42% of the required minimum housing provision target is capable of being accommodated on previously developed land (2,005 units from a total of 4,750). As such, the Council is required to provide at least 58% of the required minimum housing provision target on the Green Belt (2,745 units from a total of 4,750).

16253 Object

CHAPTER 6 Policy GB1 - Green Belt Protection

If these figures are adjusted to take account of the displacement of employment uses (assuming the provision of an equal quantity of land is required to compensate for the employment land that is redeveloped), this figure changes to 17.5% on previously developed land and 82.5% on Green Belt (828 and 3,922 units from a total of 4,750 respectively). Even allowing for the achievement of higher densities of employment on new developments, the figures above are unlikely to change significantly.

Furthermore, the table in Chapter 4 also confirms that no previously developed land will be available for development beyond 2021, or 2015 if account is taken of the displacement of the employment uses.

In light of this, not only does Chapter 6 fail to provide the necessary evidence base that will allow it to be monitored effectively, it is also necessary to consider whether it presents the most appropriate strategy for addressing the required release of Green Belt land to accommodate the defined housing and employment delivery targets to 2025 and beyond as necessary. Colonnade considers a more robust approach that is flexible and capable of being monitored, would be to clearly identify those sites capable of delivery in the short term, which for the avoidance of doubt includes those sites being promoted by Colonnade, with a reservoir of alternative sites set aside for future growth.

As set out in the representations to the Preferred Options Core Strategy, Colonnade considers that the inclusion of an affordable housing exception policy within the CSS will aid the delivery of community housing within rural areas. However, the CSS does not contain such a policy, or adequately address the issue of community housing within rural areas and the CSS is not considered to provide sufficient flexibility to allow for the delivery of essential rural housing.

f) Environmental Issues

Colonnade has concerns regarding the justification for and effectiveness of a number of the policies contained within the Environmental Issues chapter, as follows:

â€¢ Policy ENV1: The Council fails to identify how it will "maintain, restore and enhance" the sites of nature conservation importance that are identified, or how the performance of this policy will be monitored;

â€¢ Policy ENV3: In the context of the advice at paragraph 4.32 of PPS12 regarding the reformulation of national policies, Colonnade does not consider that this policy is required; and

â€¢ Policy ENV9: As set out in the representations to the Preferred Options Core Strategy, Colonnade does not consider that the necessary evidence base has been provided to justify a policy that seeks to go above and beyond the policy targets for the Code for Sustainable Homes as set out by Central Government.

g) Community Infrastructure, Leisure and Tourism

Policy CLT1 refers to the requirement for residential and employment development to contribute to the infrastructure identified in Appendix CLT1 through Standard Charges.

However, whilst the general principle of securing planning obligations through the application of standard charges is broadly accepted, the list of infrastructure requirements set out in Appendix CLT1 is not supported by sufficient evidence base to identify its robustness and credibility. As such, Colonnade does not consider either policy CLT1 or Appendix CLT1 is justified in the context of PPS12.

It is also noted that, despite the clarification sought by Colonnade at the Core Strategy Preferred Options stage, the CSS fails to confirm what information should be contained within Health Impact Assessments, which are required by policy CLT4. Once again, Colonnade requests further clarification of what is involved in the assessment and the expected outputs, which will provide greater clarity and will allow the policy to be monitored.

h) Transport

Policy T8 confirms that the Council will apply minimum parking standards. As set out in the representations to the Preferred Options Core Strategy, the guidance in Planning Policy Guidance Note 13: Transport (PPG13) is clear regarding the imposition of parking standards.

Paragraphs 52-56 of PPG13 confirm that the Local Planning Authorities should apply maximum not minimum parking standards. In order to satisfy the legal requirements set out in PPS12, the policy must reflect PPG13 to promote sustainable transport choices and further provide incentives for developers to locate further residential land closer to local service centres by requiring maximum parking standards for residential developments.

i) Economic Development

As set out in the representations to the Preferred Options Core Strategy, the land at Three Ashes Farm provides an excellent opportunity to deliver employment growth in the short term and may be a suitable site for the 'Eco-Innovation Centre' that is being promoted by the Council. Its identification as a suitable location for strategic employment growth, or the provision of an Eco-Innovation Centre, would accord with the general principles of the policies contained within Chapter 11.

16253 Object

CHAPTER 6 Policy GB1 - Green Belt Protection

The identification of Purdeys Industrial Estate as fit for purpose (in paragraph 11.32 and the Council's 2008 Employment Land Study 2008) and therefore it should be maintained and if possible expanded, is welcomed and Colonnade considers that Three Ashes Farm could deliver this expansion, providing a natural extension to Purdeys Industrial Estate and being strategically located close to the Airport.

Three Ashes would address the negative impacts that the nearby residential area experiences from the existing Industrial Estate by providing a buffer between established uses and the residential area with less intensive employment activities. The highways analysis that has been carried out has suggested that it would not have an adverse impact on roads and congestion. Furthermore, there are very few opportunities for businesses to expand and Three Ashes could provide this opportunity.

j) Conclusions

Following the submission of representations to the Preferred Options Core Strategy, Colonnade is disappointed to note that the CSS fails to take account of the majority of the issues raised in their representations.

In addition, Colonnade considers the plan to be 'unsound' as the document consistently fails to meet the tests of soundness set out in the table following Paragraph 4.52 of PPS12 and respectfully requests that the Council notifies Icen, on behalf of Colonnade, of the future arrangements for the Examination of the Core Strategy. Furthermore, Colonnade wishes to take this opportunity to formally register a request to appear at all stages of the Examination in Public, including the pre-hearing meeting and any planned hearing sessions whereby issues raised in the context of this letter are to be discussed. Please confirm this request, and that the representations made to the Preferred Options Core Strategy will be taken into account alongside the current representations, by way of return to this letter.

Icen Projects, on behalf of Colonnade Land LLP trusts that the Council will find these representations to be constructive and helpful in taking forward the Core Strategy. Should you wish to discuss any aspect of these representations further, please do not hesitate to contact us.

Summary:

e) Green Belt

With reference to the comments regarding the redevelopment of employment sites under the 'Housing' section above and the requirement to allocate sufficient land to meet the minimum housing provision targets as required by the East of England Plan, Colonnade considers that the chapter on Green Belt, and policy GB1 in particular, fails to provide the necessary evidence base that will allow it to be monitored effectively.

It is inherent that the proposed redevelopment of previously developed employment sites for residential use in order to reduce the requirement to allocate previously undeveloped land for residential use will displace these employment uses. In turn, therefore, the separate allocation of previously undeveloped Green Belt to accommodate the compensatory employment provision is required. This is accepted in principle at paragraph 11.11 of the CSS.

Without providing clarification of the anticipated quantum of land required to accommodate the provision of housing and compensatory and new employment land, it is not possible to monitor the performance of policy GB1.

However, using the Council's figures in the table setting out the breakdown of the housing provision figures in Chapter 4 of the CSS (assuming that actual completions and extant permissions are all on previously developed land), setting aside the displacement of employment uses referred to above, approximately 42% of the required minimum housing provision target is capable of being accommodated on previously developed land (2,005 units from a total of 4,750). As such, the Council is required to provide at least 58% of the required minimum housing provision target on the Green Belt (2,745 units from a total of 4,750).

If these figures are adjusted to take account of the displacement of employment uses (assuming the provision of an equal quantity of land is required to compensate for the employment land that is redeveloped), this figure changes to 17.5% on previously developed land and 82.5% on Green Belt (828 and 3,922 units from a total of 4,750 respectively). Even allowing for the achievement of higher densities of employment on new developments, the figures above are unlikely to change significantly.

Furthermore, the table in Chapter 4 also confirms that no previously developed land will be available for development beyond 2021, or 2015 if account is taken of the displacement of the employment uses.

In light of this, not only does Chapter 6 fail to provide the necessary evidence base that will allow it to be monitored effectively, it is also necessary to consider whether it presents the most appropriate strategy for addressing the required release of Green Belt land to accommodate the defined housing and employment delivery targets to 2025 and beyond as necessary. Colonnade considers a more robust approach that is flexible and capable of being monitored, would be to clearly identify those sites capable of delivery in the short term, which for the avoidance of doubt includes those sites being promoted by Colonnade, with a reservoir of alternative sites set aside for future growth.

As set out in the representations to the Preferred Options Core Strategy, Colonnade considers that the inclusion of an affordable housing exception policy within the CSS will aid the delivery of community housing within rural areas. However, the CSS does not contain such a policy, or adequately address the issue of community housing within rural areas and the CSS is not considered to provide sufficient flexibility to allow for the delivery of essential rural housing.

Full Text:

Thank you for inviting the Highways Agency (HA) to comment on the Rochford Core Strategy (CS) Submission Document and Rochford Area Action plan (AAP) prepared by Rochford District Council

As you are aware the HA is an executive agency of the Department for Transport (DfT). We are responsible for operating, maintaining and improving England's motorway and all-purpose trunk road network, collectively known as the Strategic Road Network (SRN), on behalf of the Secretary of State for Transport.

In spatial planning and development control terms, we have a duty to safeguard the operation of the motorway and trunk road network as set out in the Department for Transport Circular: 02/2007: Planning and the Strategic Road Network. <http://www.dft.gov.uk/pgr/regional/strategy/policy/circular207planningandstrategic>. The circular encourages the HA to work co-operatively with Local Planning Authorities within the framework of the Government's policies for planning, growth areas, regeneration, integrated transport and sustainability. We look to your Council's Local Development Framework to promote strategies, policies and land allocations which would support alternatives to the private car.

In the case of Rochford there are no trunk roads within the District although there are two strategic corridors namely the A13 and A127/A1159 which connect into the M25 motorway network at Junctions 30 and 29 respectively. Sections of these areas are currently heavily congested, particularly during peak periods, and operate under considerable levels of network stress. Therefore it is important to the HA that the impact of major development proposals in the Rochford area is considered within the context of future impact on the M25 and the A13 Trunk Road.

Please see below some general comments regarding the soundness of the CS and SSA from a transport perspective, referring to specific proposed submission policies as necessary. This response has been completed with reference to paragraph 4.52 of PPS12 (2008) PPS12, paragraph 4.52 - To be 'sound' a core strategy should be JUSTIFIED, EFFECTIVE and consistent with NATIONAL POLICY.

CORE STRATEGY

Policy GB1 - Green Belt Protection

The HA acknowledges that only the minimum amount of Green Belt land will be allocated to meet the District's housing and employment needs as necessary. However, the HA is concerned that any proposed redevelopment of greenbelt sites could result in development in areas with limited access to sustainable transport modes therefore resulting in higher levels of car usage and subsequent impact on the SRN. Although the HA recognizes that new public transport hubs that would facilitate the use of non-car modes could be developed over time, this process is likely to require very substantial investment.

It is therefore important that an appropriate assessment of infrastructure requirements is performed for development sites on Green Belt land. Funding towards the necessary public transport infrastructure improvements must be sought and secured prior to occupation of any new development on greenbelt land. Furthermore, the occupation of such developments should be phased in line with necessary transport infrastructure. This will help the CS meet the PPS12 requirement that a sound DPD should be 'justified' and 'effective' and hence deliverable.

Policy T1 - Highways

Policy T1 highlights the need to reduce reliance on the private car but also observes that 'some impact on the highway network is inevitable'. In a District with such high levels of private car ownership and a limited public transport network, as stated in paragraph 10.2, it will be important to assess the potential impacts to the highway network and ensure that mitigation measures are proposed and implemented where necessary.

An emphasis should be placed on the provision and improvement of sustainable transport infrastructure, particularly where high trip-generating developments such as offices are proposed. In line with the DfT's Guidance on Transport Assessment (2007) - DfT GTA, paragraph 4.51 - 'The key issue is the need to ensure that development proposals strive to achieve nil detriment ('no worse off') to the strategic network, for the opening year and appropriate horizon year'. This emphasis will assist in mitigating potential increases in private vehicle trips and hence help ensure that there is a nil-detriment effect on the SRN.

Policy T3 - Public Transport

Core Strategy Submission Document

O - 16726 - 14244 - Policy GB1 - Green Belt Protection - i, ii

16726 Object

CHAPTER 6 Policy GB1 - Green Belt Protection

The recent Planning Inspectorate 'LDF - Learning from Experience' document (September 2009) suggests that a Core Strategy should identify a clear source of funding for infrastructure for at least the first 5 years of the plan - The Planning Inspectorate, LDF: Examining DPDs: Learning from experience, September 2009, Paragraph 22 - 'For at least the first 5 years of the plan it should be clear what infrastructure is required, who is going to fund and provide it and how it is to relate to the rate of development'.. Paragraph 10.15 of the CS highlights the importance of public transport links for new developments and implies that developers may be required to contribute towards public transport provision. However, it is noted that developer contributions cannot be expected to pay for all transport improvements and as such, in line with the recent Planning Inspectorate document outlined above additional sources of funding should be identified. It is recommended that alternative sources of funding for public transport improvements are clearly outlined within the CS to ensure that adequate infrastructure provision is made.

Policy T4 - South Essex Rapid Transit

As mentioned in our response to the Core Strategy Issues and options consultation the HA is supportive of this policy and the need to progress the route through South Essex. This has the potential to reduce the impact on the SRN (A13).

Policy T5 - Travel Plans

The HA welcomes the requirement for a travel plan for developments involving both destination and origin trips. However it is noted that no threshold for employment sites have been specified. Essex County Council requires the production of a workplace travel plan for developments with over 50 employees or where there will be a significant impact on the local road network. To avoid ambiguity for developers, the HA recommends that the Rochford District Core Strategy specifies a similar threshold within Policy T5. This will ensure the Core Strategy is in line with PPG13 paragraph 87 - PPG13 - 'Local authorities are expected to consider setting local targets for the adoption of travel plans by local businesses and other organizations..'

Policy ED2 - London Southend Airport

The HA previously responded to the London Southend and Environs Joint Area Action Plan Preferred Options Document (March 2009). As such, we have not repeated our comments here but instead refer you to our consultation response dated 31 March 2009.

Summary:

Policy GB1 - Green Belt Protection

The HA acknowledges that only the minimum amount of Green Belt land will be allocated to meet the District's housing and employment needs as necessary. However, the HA is concerned that any proposed redevelopment of greenbelt sites could result in development in areas with limited access to sustainable transport modes therefore resulting in higher levels of car usage and subsequent impact on the SRN. Although the HA recognizes that new public transport hubs that would facilitate the use of non-car modes could be developed over time, this process is likely to require very substantial investment.

It is therefore important that an appropriate assessment of infrastructure requirements is performed for development sites on Green Belt land. Funding towards the necessary public transport infrastructure improvements must be sought and secured prior to occupation of any new development on greenbelt land. Furthermore, the occupation of such developments should be phased in line with necessary transport infrastructure. This will help the CS meet the PPS12 requirement that a sound DPD should be 'justified' and 'effective' and hence deliverable.

1.0 Instruction and Introduction

1.1 Charles Planning Associates Limited (Chartered Town Planners) is Instructed by Swan Hill Homes Limited (Swan Hill) to prepare and submit representations on their behalf in respect of the Rochford District Local Development Framework: Core Strategy Submission (September 2009) Development Plan Document.

1.2 The comments refer to the relevant sections and policy designations in the Submission document, as appropriate.

1.3 The comments set out in this submission are intended to assist the District Council in taking forward its Local Development Framework. It is our intention to continue to be involved in the LDF preparation process and we look forward to the opportunity to comment further at the Examination to the Core Strategy.

1.4 If you have any queries regarding the content of this submission then please do not hesitate to contact:

Peter Kneen BSc (Hons) MSc MRTPI
Planner

2.0 Housing:
Policy H1 - The Efficient Use of Land for Housing

2.1 Swan Hill recognises the importance of seeking to concentrate new developments mainly in the existing urban areas, on previously developed land where possible, particularly in view of the Government seeking to ensure 60% of all such new developments are on previously development land (PDL).

2.2 However, given the character of the District, and the strategic housing requirement of the East of England Plan, Swan Hill supports the approach that the Council must also make provision for additional development on the edge of existing settlements on greenfield sites, particularly in the most sustainable locations. As such, Swan Hill supports that where feasible, the redevelopment of existing employment sites for residential/employment purposes can make a contribution towards the strategic housing requirement, provided that sufficient additional employment land is brought forward to ensure the stability of employment levels in the District, and to ensure employment growth meets the East of England Plan requirements.

2.3 Swan Hill considers that Policy H1 should include consideration that new extensions to existing settlements have regard to their potential impact on the wider characteristics and openness objectives of the Green Belt.

Policy H2 - Extensions to Residential Envelopes and Phasing

2.4 Swan Hill generally supports the approach taken by the Council in this policy. As set out above, Swan Hill consider the Council's acknowledgment that housing requirements should be met through the allocation of land on the edge of the existing settlements is the most suitable way forward to meeting the Council's strategic housing requirement and complies with the advice in PPS3.

2.5 The need for suitable greenfield urban extensions represents the best way forward for the Council to meet its strategic housing requirement, as set out in the East of England Plan. Swan Hill supports the recognition that the potential supply of alternative previously developed sites is limited, without detrimentally affecting the character of the District, and therefore the best way forward is the use of sustainable greenfield urban extensions to the existing settlements of the District.

2.6 However, Swan Hill consider that a fundamental consideration that the District Council should consider relates to the potential impact of the urban extensions on the Green Belt policy has been somewhat overlooked. The wider sustainability credentials of the settlements of the District should only be one of many key considerations for determining the level of expansion. In view of the proximity of Southend-on-Sea to all the main settlements of the District, and the influence this has on the likely location many people would travel for employment and leisure, sustainability of many of the settlements is not a key overarching factor, and greater weight should be placed on the potential impact on the openness of the Green Belt, as this cannot be remedied if development occurs in the wrong location.

2.7 As such, Swan Hill considers that determining the location of growth for the main settlements should be to identify

Core Strategy Submission Document

S - 16880 - 8329 - Policy GB1 - Green Belt Protection - None

16880 Support

CHAPTER 6 Policy GB1 - Green Belt Protection

those locations where the impact on the wider setting of the Green Belt can be minimised. Further justification for those general locations chosen should be identified in Policy H2. In this regard, Swan Hill has serious concerns regarding the removal of Land South West of Great Wakering as a viable option for the growth of the settlement. The development of this area of Great Wakering, in addition to the potential redevelopment of the Star Lane Industrial Estate could provide a more comprehensive development, whilst ensuring that the wider openness of the Green Belt is maintained. Land South West of Great Wakering is significantly better placed to limit the impact on the wider Green Belt than Land West of Great Wakering, and could contribute to the provision of an important amenity and wildlife site for the local community.

2.8 In addition, Swan Hill consider that the Council now has no reserve provision in the event that any of the existing employment sites set out in Policy H1 fail to come forward for development within the envisaged timescale. Further, Land West of Great Wakering has not been identified in the SHLAA as a deliverable site to help meet the strategic housing requirement, contrary to the requirement set out in PPS3.

2.9 As such, Swan Hill would support the provision of suitable sites which could be safeguarded for future development in the likelihood of a shortfall in supply.

Policy H3 - Extensions to Residential Envelopes Post 2021

2.10 As set out above, Swan Hill supports the overall approach the Council has taken towards the provision of sustainable urban extensions as a suitable means of meeting their strategic housing requirement. However, as set out for Policy H2 above, Swan Hill has serious concerns regarding the removal of several proposed sites set out in the October 2008 Preferred Options Core Strategy, without any guarantee of the ability to deliver those sites set out in Policy H1.

2.11 As also considered above, the inclusion of West of Great Wakering for 250 dwellings should not be included ahead of South West of Great Wakering, in view of the fact that the site is not identified in the SHLAA as available, suitable and achievable as required by PPS3, and thus is not supported by a robust and creditable evidence base for its inclusion as a strategic site for development.

2.12 Whilst Swan Hill acknowledge that alterations to Policy H1 has resulted in the removal of some locations for growth in Policy H3 (as set out in the Sustainability Appraisal), Swan Hill does not consider that the most appropriate locations have been chosen.

2.13 In addition to the matters raised above, the use of West of Great Wakering would also result in the loss of valuable agricultural land, which clearly in a Green Belt location, should be less suitable for development than other sites, such as South West of Great Wakering, which would have limited impact on the wider Green Belt policy, and not result in the loss of valuable agricultural land.

2.14 Finally, in respect of Policies H1, H2 and H3, all of the above comments are based on our interpretation of the Submission Version Core Strategy when compared to the October 2008 Version of the Core Strategy. Without the ability to undertake a detailed assessment of the Council's SHLAA, it is not possible to clarify the proposed Core Strategy position regarding the proposed direction of growth proposed for the settlements in the District. As such, Swan Hill reserves the right to make additional representations regarding the proposed Policies H1, H2 and H3 following the publication of the SHLAA in due course.

Policy H4 - Affordable Housing

2.15 In general terms, Swan Hill supports the approach taken by the Council towards the provision of affordable housing for new residential developments. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H5 - Dwelling Types

2.16 Swan Hill supports the policy provision of H5, and considers that the approach taken by the Council for this policy represents a suitably flexible alternative to stipulating percentages of dwelling mix, sought by some local authorities. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H6 - Lifetime Homes

2.17 In regard to this policy, Swan Hill objects to the Council's policy where all new dwellings should be provided to the Lifetime Homes Standard. Whilst it is acknowledged that the UK has an aging population, Swan Hill considers that seeking to provide Lifetime Homes on all sites is considered to be overly onerous for proposed developers, particularly when considering the requirement for all car parking spaces to be suitable for disabled users, which could result in more schemes becoming unviable. Therefore, the provision of a percentage of Lifetime Homes should be considered through negotiations with the Council at the planning application stage, and should be determined on a case-by-case basis.

3.0 Character of Place: Policy CP1 - Design

Core Strategy Submission Document

S - 16880 - 8329 - Policy GB1 - Green Belt Protection - None

16880 Support

CHAPTER 6 Policy GB1 - Green Belt Protection

3.1 The Town and Country Planning (General Development Procedure) Order 1995 (As Amended) makes the submission of a Design and Access Statement for most types of planning applications a Statutory requirement, and as such, the provision of a Design Brief represents a pre-requisite of all major planning applications.

3.2 Policy CP1 seeks to ensure the provision of good, high quality developments that reflect local characteristics and distinctiveness, this ideology is supported by Swan Hill.

4.0 The Green Belt:
Policy GB1 - Green Belt Protection

4.1 Following the amendments to the wording of the Policy since the October 2008 Preferred Options Core Strategy, Swan Hill is now generally supportive of Policy GB1 and its supporting text. However, as expressed above, it is important that where alterations to the Green Belt boundary occur as a result of the extension of the settlements to meet the strategic housing requirement, both the minimal amount of land is taken and where that land is taken for development, it represents the best available land which has a minimal impact of the wider openness characteristic of the Green Belt.

5.0 Environmental Issues:
Policy ENV3 - Flood Risk

5.1 Swan Hill generally supports the approach set out in Policy ENV3 regarding ensuring development accords with the sequential test of PPS25. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV4 - Sustainable Drainage Systems (SUDS)

5.2 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV4. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV8 - On-site Renewable and Low Carbon Energy Generation

5.3 Whilst Swan Hill recognises the importance of reducing carbon emissions, particularly in new housing developments, and the role this can play in reducing the nations overall Greenhouse emissions. As such Swan Hill is generally supportive of Policy ENV8. It is noted that Policy ENG1 of the East of England Plan sets out a threshold of developments comprising 10 or more dwellings. Swan Hill consider it important for the District Council to justify the reduction in the threshold level.

5.4 Further, no assessment of Policy ENV8 has been set out in the Sustainability Appraisal which justifies the change in threshold from that of Policy ENG1 of the RSS.

Policy ENV9 - Code for Sustainable Homes

5.5 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV9. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

6.0 Community Infrastructure, Leisure and Tourism:
Policy CLT1 - Planning Obligations and Standard Charges

6.1 Swan Hill generally supports the overall approach the Council has taken in Policy CLT1. It is considered Policy CLT1 sets out a degree of flexibility to ensure that all sites are considered on a site-by-site basis, assessing the individual merits of each planning application, in order to ensure the levels of contributions applicable meet the five tests of Circular 05/05. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policies CLT5 - Open Space;
CLT7 - Play Space;
CLT8 - Youth Facilities; and,
CLT10 - Playing Pitches

6.2 Swan Hill supports the need for new residential developments to incorporate a degree of new publicly accessible open space, children's play space, youth facilities and playing pitches, and as such, generally supports the policy approaches taken by the Council.

6.3 However, it is important that whilst the Council may seek to undertake an assessment of providing standard charges for new development, which, as set out in Policy CLT1, this should be based on thorough public consultation and consideration and sound justification. Swan Hill consider that within the provision of a standard charge, it is important that such provision allows for a degree of flexibility to ensure that each site is assessed individually and on its own merits. This is particularly important for those sites close to existing open spaces and facilities. As such, the levels of

Core Strategy Submission Document

S - 16880 - 8329 - Policy GB1 - Green Belt Protection - None

16880 Support

CHAPTER 6 Policy GB1 - Green Belt Protection

open space and recreation facilities required in the 'standard charge' should be based on an up-to-date PPG17 Open Space assessment, which should be used to form a key consideration in the levels of provision likely to be required in the standard charge system proposed.

7.0 Transport: Policy T1 - Highways

7.1 Swan Hill supports the overall objectives set out in Policy T1 requiring developments to be located and designed to reduce the reliance on the private car and to meet the infrastructure needs generated by development or seek to help achieve these needs is acceptable in principle.

7.2 Swan Hill recognises the importance of providing sufficient infrastructure provision to meet the requirements of development, and that where developments have insufficient consideration of impact on existing infrastructure, they should be considered unacceptable and contrary to National policy guidance. However, Swan Hill considers it important to emphasise that the developer's role should not be seen as a means to meet existing shortfalls in provision.

Policy T3 - Public Transport

7.3 Swan Hill is generally supportive of the policy approach set out in T3, however, as set out in paragraph 7.2 above, it is important that the District Council do not consider that it is the developer's responsibility to resolve existing shortfalls in provision of public transport, and any contribution towards additional public transportation provision should only be to mitigate against the additional level of demand likely from the development proposed.

Policy T5 - Cycling and Walking

7.4 Swan Hill supports the general approach to this policy, as Swan Hill recognises the importance of promoting the use of alternatives to the private car. The policy provision acknowledges the need to ensure relevant contributions in the event of additional travel demands generated by individual developments, whilst also setting out additional aspirations for the cycle network in the District.

7.5 As such, Swan Hill considers this policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy T8 - Parking Standards

7.6 The Council has recently (January 2007) adopted SPD on the requirements for parking standards, and as such, Swan Hill generally supports the policy approach chosen by the Council. As set out in the SPD, whilst Swan Hill generally supports the approach taken by the District Council towards setting residential parking standards, in that the Council has recognised that in the suburban areas, even with some access to public transport, the majority of residents will rely on the use of private cars. However, Swan Hill has concerns over the failure of the District Council to comply with the provisions of PPG13: Transport (2001) which sets out that Local Planning Authorities should not set minimum standards for car parking. Whilst it is acknowledged that PPS3 sets out provision for the consideration of local circumstances, it is considered that the Council has not justified this deviation from PPG13's maximum standard.

7.7 Whilst it is acknowledged that such justification may become apparent through the work currently being undertaken by Essex County Council, until such time, the District Council should only seek to apply the maximum standards indicated in PPG13. However, Swan Hill recommends that the District Council make provisions in the wording of the Policy to allow for changes in the event that future policy on car parking standards need to reflect the County standard, following the completion of the County Council review.

8.0 Economic Development: Policies ED3 - Existing Employment Land ED4 - Future Employment Allocations

8.1 In respect of Policies ED3 and ED4, Swan Hill notes that they have changed considerably since the October 2008 Preferred Options document, in that they are site specific regarding the location of the proposed redevelopment of existing employment sites. These four sites are also identified in Policy H1 - Efficient Use of Land, and in general, Swan Hill supports the approach to the redevelopment of these sites (where feasible) based on the assessments of the sites set out in this version of the Core Strategy.

8.2 However, Swan Hill has concerns that these policies might not be considered suitably sound given that insufficient opportunity has been allocated for consultation on their redevelopment. Without the SHLAA being publically available prior to the consultation on this Core Strategy, an insufficient evidence base has been provided to corroborate that these sites are neither suitable or deliverable to meet the test of soundness requirements.

Summary: Policy GB1 - Green Belt Protection

4.1 Following the amendments to the wording of the Policy since the October 2008 Preferred Options Core Strategy, Swan Hill is now generally supportive of Policy GB1 and its supporting text. However, as expressed above, it is

Core Strategy Submission Document

S - 16880 - 8329 - Policy GB1 - Green Belt Protection - None

CHAPTER 6 Policy GB1 - Green Belt Protection

important that where alterations to the Green Belt boundary occur as a result of the extension of the settlements to meet the strategic housing requirement, both the minimal amount of land is taken and where that land is taken for development, it represents the best available land which has a minimal impact of the wider openness characteristic of the Green Belt.

Full Text: Local Development Framework

Representations on the Core Strategy
Submission Document, November 2009
On behalf of Barratts Eastern Counties

Introduction

The requirements of Core Strategies are enshrined in the 2004 Planning and Compensation Act, the Town & Country Planning (Local Development) England (Regulations) 2004 and the 2008 policy guidance in PPS12. The requirements of Coe Strategies are clear. And they are legal requirements. The Core Strategy must comply with the Local Development Scheme, Statement of Community Involvement and the Regulations. The Core Strategy must be subject to a sustainability appraisal, have regard to national guidance, conform generally with the Regional Spatial Strategy and have regard to any Sustainable Community Strategy. A Core strategy must be sound - justified, effective and consistent with national policy. The following representations therefore focus on these legal requirements.

HOUSING

Paragraph 4.6 - Evidence Base

To meet the soundness test Submission Core Strategies (SCS) must be justified, that is to say it must be founded on robust and credible evidence base and comprise the most appropriate strategy when considered against reasonable alternatives. The housing strategy in as far as it identifies a need for Green belt sites is sound, however, there are other elements which are unsound.

Paragraph 4.6 notes that the Strategic Housing Land Availability Assessment (SHLAA) has examined the supply of housing. It is presumed that the Table at paragraph 4.6 is the outcome of this examination. Whilst the SHLAA has some legitimacy in that it identifies various sites that are apparently available, we are concerned that because the SHLAA was only published in November 2009 it post dates the SCS. This implies that the SCS is driving the SHLAA exercise rather than the other way round. Whilst this may have no real practical effect on the outcome of the SCS and the identified need for Green Belt sites, the Inspector will be mindful of the advice in paragraphs 33 and 54 of PPS3 that SCS draw on the evidence in SHLAA. It may be that the SCS should explain how the evidence base has been used to justify the strategy.

PPS12 explains at paragraph 4.37 that Core Strategies are based on thorough evidence. Since the SHLAA has only recently been published it is considered that the SCS is unsound as it is not justifiable. This, together with other comments on the SCS, indicates that the process should be delayed to ensure that a more robust document is placed in front of the EiP Inspector.

Table at Paragraph 4.6 - Evidence base

From our review of the available evidence it would appear that the housing land supply is insufficient and that Green Belt release are required. From the wider strategy being promoted we note that some of the sites that the District Council consider to be 'appropriate' are likely to relate to existing employment areas. As set out elsewhere in our representations, we maintain severe reservations that the redevelopment of existing employment sites for alternative uses and particularly the Eldon Way Industrial Estate is unsustainable. We will make reference to the effectiveness of this strategy in relation to sustainability, whether it is justified in the context of National Policy and the deliverability of such a strategy elsewhere.

In particular, paragraph 11.32 of the SCS refers to existing employment land and sites within the UCS. It does not refer the SHLAA and as such it appears that an evidence base to support the re-use of employment land for residential is not reported in the SCS.

Having reviewed the 2008 Annual Monitoring Report, as we did when commenting on the 2008 Preferred Options Core Strategy, we maintain severe doubts as to the appropriateness of some of the previously developed sites identified as potential housing sites and their expected housing yield. Whilst we cannot at this stage ascertain whether the SHLAA

Core Strategy Submission Document

S - 16928 - 10009 - Policy GB1 - Green Belt Protection - None

16928 Support

CHAPTER 6 Policy GB1 - Green Belt Protection

sites referred to in this table correlate with the Annual Monitoring Report and indeed the 2007 Urban Capacity Study, it is our view that there will be some commonality and so the reliance on these sites is likely to be at odds with Government Policy. We shall elaborate on this objection in relation to the specific housing policy below.

We note that the last two rows in the Table at paragraph 4.6 set out figures with and without Green Belt releases. The text to this section of the Core Strategy should, for reasons of clarity, explain that Green belt review will be necessary in order to deliver the required housing.

Paragraph 4.9

The table on page 40, which sets out the settlement tiers, is supported. Rayleigh, Rochford/Ashingdon, Hockley/Hawkwell are clearly the largest settlements in the District and they benefit from good employment, housing, leisure, community and public transport provision. These settlements are the most sustainable ones with the greatest mix of uses. Consequently, it is sensible that the Core Strategy identifies these as top tier settlements and is able to target them with growth accordingly. This component of the strategy is justified by reference to sustainability data and is effective, since targeting development at these locations will ensure a more sustainable pattern of development.

Paragraph 4.14

We maintain that the strategy for redeveloping the Eldon Way Industrial Estate for housing and other alternative uses to employment is unsound. It is neither justified nor effective. The Industrial Land Availability Study 2006 sets out on page 7 strategic objectives. The 3rd objective seeks to Support town centre and industrial estate enhancement initiatives aimed at improving the environment ensuring the area is economically prosperous and competitive. Clearly the strategy as currently drafted envisages major changes to existing industrial estates, including alternative uses. This strategy is not consistent with other strategies and evidence based studies and so cannot be justified in the context of the tests set out in PPS12. It is also an ineffective strategy since the new employment locations that would free up the Eldon Way site for redevelopment relies on transport infrastructure that has no certainty of being delivered. Principally, the erosion of employment uses at Eldon Way could make the settlement of Hockley/Hawkwell less sustainable and thus conflict with the tiered approach on page 40, paragraph 4.9.

Policy H1

Prioritising the use of previously developed land ("pdl") is supported in principle. It is a justified strategy in the context of PPS3 and effective as sequential choices can be made by implementing the policy. However, the District Council is also promoting a strategy which seeks the redevelopment of existing employment locations to alternative uses and by consequence is identifying green field sites for new employment development elsewhere (Policy ED4 refers). This 'land swapping' is not considered consistent with PPS3, nor is it considered to be justified or effective in delivering the desired strategy. This is particularly the case as most of the existing employment sites are occupied and therefore unavailable for redevelopment. In addition, the new Greenfield sites are in an arguably less sustainable locations away from the top tier settlements identified on page 40 of the Submission Core Strategy. Clearly this element of the strategy is inconsistent with the wider strategy.

The Industrial Land Availability Study 2006 is included as an evidence base by the District Council. It includes an introductory section, which explains that the authority wishes to make Rochford the place of choice for new business. It includes several strategic objectives on page 7 including "Support town centre and industrial estate enhancement initiatives aimed at improving the environment ensuring the area is economically prosperous and competitive." It reviews existing employment areas and identifies vacant land, including land available from allocations. It does not include any assessment of new sites or potential opportunities for new sites that might have been expected to feed into the Core Strategy. The strategy for identifying Green Belt site employment allocation does not appear to be based on any evidence in this document and in that context cannot be justified. The strategy being promoted potentially conflicts with Government policy in PPG13, PPG2 and emerging PPS4.

The Employment Land Study 2008 is a much later document. It has a key recommendation on page ii "we recommend that Rochford District Council adopts strong policies to protect existing employment land." Furthermore under recommendations for existing sites on page iii-iv of that document it states "In our view, Hockley Trading Centre is a strategically well placed employment location. However, we recognise the ambitions of the Hockley Town Centre masterplan and that within this the Council should consider it to be allocated for other uses. However, we recommend that this reallocation happen only if provision is made within the masterplan for office use within Hockley Town Centre as part of a mixed use scheme." The view of the writers of this document is clear - the Eldon Way Industrial estate (Hockley Trading Centre) is a good employment site and that it is for other reasons that alternative uses are being considered and only then if office development is supported. This supports our representations that new future uses at the Eldon Way site should be employment dominated and that alternative uses should relate to the objectives of the Town Centre which is to enhance the shopping and leisure facilities. Residential is not an appropriate alternative.

This document recommends the use of land to the west of Rayleigh for employment and envisages Green belt release. However, the SCS does not explain through the evidence base why existing employment sites should be 'deallocated' and Green belt land unnecessarily used.

16928 Support

CHAPTER 6 Policy GB1 - Green Belt Protection

In addition to these key issues we have some specific concerns. As a consequence we maintain an objection to the second paragraph of Policy H1. This policy states that the Council will seek the redevelopment of various industrial estates including Eldon Way. The Policy says that alternative uses will be sought (presumably alternative to the existing employment offer) and that new land will be allocated elsewhere. This policy statement, in relation to Eldon Way in particular, is unsound for a number of reasons:

The emerging Hockley Area Action Plan consulted upon in 2008 states that the Eldon Way Industrial Estate is strategically well placed. In a sense this statement underplays the true importance of this highly sustainable employment location and only major employment area in Hockley/Hawkwell. The employment area is adjacent to the railway station and located a short distance from the main bus routes that run along Spa Road. Some of the residential areas of the town are also within walking distance of this commercial area, thus providing a potential for sustainable travel by employees. The Eldon Way Industrial Estate is therefore right at the heart of the settlement of Hockley/Hawkwell and provides an opportunity to meet sustainable transport objectives by reducing the need to travel by car. Consequently, this employment area should be highlighted as a premier employment site in sustainability terms, both in the context of PPG13, PPG4 and PPS6. To encourage alternative uses as set out in Policy H1 implies the removal of the majority of employment based activity at Hockley/Hawkwell and this would be contrary to National policy, would not be the most appropriate strategy when considered against alternatives and is therefore unsound.

Whilst it is acknowledged that improvement to the Eldon Way Industrial Estate can and should take place, the extent to which the mix of employment uses should be altered in favour of alternative land uses requires careful consideration. It is our view that a mix of existing or indeed new employment land uses with some Town Centre type uses should dominate the Eldon Way site. A mix of employment types between offices, light industry and other high technology industries should be encouraged as this will provide many locational advantages to the firms that agglomerate together. The Council says that the existing uses on this site are harmful to amenity. However, the site has operated for many years without any significant issues and if renewal for B1 type uses are encouraged then the employment area can be maintained without harm to amenity. Renewal of the employment stock can help develop and improve trade, improve the sustainability of businesses as a whole and make for a more flexible labour market as skill levels are varied. A singularly different use altogether or a variety of uses which excludes employment could undermine the long term sustainability of the area and Town Centre. As such Policy H1 is not an effective strategy and should be amended to acknowledge the importance of Eldon Way and the need to renew the employment stock to ensure that the site maintains its important role as a employment site, albeit with some ancillary alternative use development where appropriate.

The 2008 Retail Study notes that Hockley Town Centre is not strong and there is trade leakage. Eldon Way Industrial Estate provides a customer base for existing town centre uses. Weekday spending within town centres is an important contributor to the viability of many retail and leisure businesses either through expenditure by employees during the lunchtime trade or expenditure by employers, on necessary goods and services. This relationship helps sustain the critical mass of a centre and provides a platform for new retail and leisure growth. It is important to have a balanced centre with a variety of uses. Policy H1, as currently drafted, implies the removal of employment related development and this is likely to harm the vitality and viability of Hockley Town Centre. The Council has presented no evidence to suggest that this is not the case. Importantly, the 2008 Retail Study explains that there is a need for additional retail and office space. In principle we would support additional office and other B1 type uses plus retail but employment uses should always dominate for the sustainability reasons given above. Retail and office development are likely to present a viable alternative to some of the more industrial type uses.

Consequently, we do not support the phrasing of the third paragraph of Policy H1 and maintain that the most appropriate strategy is to seek renewal of the employment stock with employment based uses and with some new retail development. Removal of employment land uses completely as currently implied-which was the approach adopted in the emerging Hockley Area Action Plan - is not a justifiable strategy.

One of the key tests of a Core Strategy is consistency between policies in the emerging Plan and this strikes at the heart of demonstrating an effective strategy. Policy H1 implies alternative uses to employment and the relocation of Eldon Way to a site identified under Policy ED4. However, Policy RTC6 sets out a suite of policy criteria for Hockley Town Centre which includes employment and commercial activities. In addition Policy ED3 seeks the protection of sustainable employment sites (Eldon Way) and notes that some reallocation of existing employment sites will include a proportion of employment. It notes that in the case of Eldon Way employment development will form a component. The policies appear at odds with one another. The third paragraph of Policy H1 should be deleted as the second paragraph is sufficient to set a strategic context for delivering new housing development. The employment policies and Hockley specific policies should be left to consider the type and quantum of land uses appropriate in the area. If the third paragraph of H1 is to be retained then it should tie in more with Policy RTC6 and in our view explain that employment uses should dominate any redevelopment proposals for the Eldon Way site and that retail and leisure uses should be a supporting proportion.

Implementation, Monitoring and Delivery - page 132 onwards

One of the key tests of soundness is that the Core Strategy should be effective - it should be able to deliver its strategy. The Implementation strategy set out at page 132 onwards of the Core Strategy does not explain how Policy H1, RTC6 and the strategy for redeveloping Eldon Way (Policy ED2 and ED3) will be delivered. The comment at Policy ED3 on

16928 Support

CHAPTER 6 Policy GB1 - Green Belt Protection

page 161 identifies it as a potential risk and alludes to land assembly difficulties and the choices to be made by owner/occupiers. In order to deliver the strategy there should be a clear understanding as to whether the new land use values being promoted are sufficient to encourage relocation voluntarily. Secondly there is a need for more information to be gathered and presented to show that current occupiers and landowners are willing to relocate and the timescales likely for this. For example, do the building lease contracts enable early review or are there any break out clauses. There should be some commentary on whether the Council will engage in compulsory purchase orders to pursue their strategy should the 'encouragement' route fail. As currently drafted there is no clear path to deliver the strategy and the danger is that despite reallocation, the sites identified for redevelopment will not come forward in the plan period. In this regard, evidence to satisfy the test of soundness is not provided.

Policy H2 - General Locations

We support the strategy that new housing growth should be targeted at land South of Hawkwell. This area is suitably located to the urban area of Hockley/Hawkwell and to tie in with the settlement tiers on page 40 of the Submission Core Strategy the same terminology for settlement should be used. This ensures a consistency within the SCS. The choice of this location as a housing growth area is appropriate as it would not contribute to the coalescence of the urban area with Ashingdon (there is existing development between this identified housing area at Rectory Road and Ashingdon and moreover, Rectory Road can form a natural physical boundary for the new Green belt boundary. This area is also well located to the existing road network. Cherry Orchard Way has recently been improved and provides much better accessibility to the proposed housing growth area than any other location around Hockley/Hawkwell. The existing bus routes along Rectory Road also make this location sustainable and the additional housing proposed will help underpin the financial viability of bus routes in this area. Locally there are employment opportunities, including the small commercial estate off Main Road. The Eldon Way Industrial Estate adjacent to the Town Centre also provides the opportunity for employment locally. Extensive public open space, play pitches and built leisure facilities are located just to the north of this area and a community hall is located off Briar Close, nearby. The area to the south of Hockley/Hawkwell is close to local shops on the corner of Heycroft Road and Main Road and there are numerous footpath links between this area and the local community including links via Thorpe Road, Thorpe Close, Briar Close, Hawkwell Park and Park Gardens. The area therefore provides the opportunity to enhance existing links, including cycle links, and contribute towards community integration - more so than other sites on the south side of this settlement. The site is also in the control of one house builder and deliverable.

However, we find that the Policy is not fully consistent with national policy and furthermore needs to be reviewed in order to be justified and effective. We have concerns as to how the Green Belt review strategy set out at Policy H3 and in the Local Development Scheme integrates with this policy and feel that Green Belt review should be more explicit throughout the SCS. We note that it is only Policy H3 which indicates the need for Green Belt land review. In fact Policy H3 only pays lip service to the need for a Green Belt review and provides, at best, loose advice in this regard. It says that prior to 2021 Green Belt will be safeguarded save for the releases noted under Policy H2. Policy H3 then goes on to talk about land release for development after 2021 but no time period is set out to provide a framework for any Green Belt review in this latter period. In our view Policy H2 and certainly Policy H3 and Policy GB1 should explain fully the need for a Green Belt review and that such a review should take place for a defined period. That such a review has not taken place in advance of the SCS is a serious matter for the Inspector to consider in the context of soundness. That said, it is considered that any review of Green Belt should have regard to a period beyond 2021 as indicated by draft Policy H3. Paragraph 1.9 of the East of England Plan explains "this RSS covers the period to 2021 but sets a vision, objectives and core strategy for the longer term". 2026 is therefore considered a minimum suitable period that any Green Belt review must have regard to in order to meet the 5 year land supply requirements in PPS3 for the period after 2021. However, Policy SS7 of the East of England Plan talks about Green Belt reviews up to 2031. In view of this and the need to explore the circumstances of Rochford - that existing settlements cannot contain future housing growth; that Green Belt is necessary to provide housing; and that these provide exceptional reasons to vary the Green Belt locally (paragraph 2.6 to 2.7 of PPG2) the policies and strategy for the SCS should identify a Green Belt review covering the period to 2031 and set out why a review is necessary.

Policy H2 - Phasing and Quantum

The 2008 Preferred Core Strategy document indicated that the area south of Hawkwell should deliver 330 dwellings over a phasing period to post 2021 (see Policy H2 and H3 of that document). The SCS reduces the quantum of housing in this area to 175 but expects delivery by 2015. At a broader level the Preferred Options Core Strategy of 2008, (Policy H2) required 1,450 dwellings to 2015 and a further 1,050 by 2021. In the SCS the figures are now 775 and 1,010 respectively.

Since the SHLAA post dates the publication of the SCS, we are uncertain as to the reason why such a significant reduction in quantum of housing and extensions to the residential envelope is considered necessary. Presumably it is the 'new' strategy to redevelop existing employment areas within the settlements that has led to this change. Our representations on this strategy and specifically the Eldon Way Industrial Estate are included elsewhere within our representations. Previously we have commented on the Table at paragraph 4.6 of the Submission Core Strategy and the lack of evidence to underpin that table. It seems odd that in the space of a year the expected requirement for Greenfield sites has effectively halved on the basis of a SHLAA exercise. The community is therefore not able to effectively

16928 Support

CHAPTER 6 Policy GB1 - Green Belt Protection

comment on the housing land supply and at this stage the Submission Core Strategy is legally unsound.

That said, we are of the view that the quantum of housing envisaged south of Hockley/Hawkwell should be more than the 175 currently envisage. In coming to this view we have reviewed the Urban Capacity Study and the latest housing figures in the Annual Monitoring Report 2008. We conclude that the shortfall in housing land supply is such that 330 dwellings in this location is appropriate.

The recently published SHLAA is based upon the data obtained from the Urban Capacity Study 2007, a call for sites exercise and data from the Annual Monitoring Report 2008.

The 2007 Urban Capacity Study (UCS)

1. 2007 is widely recognised as being the peak level of house prices in the UK and it was acknowledged by Government and practitioners alike that 2007 house prices were at an unsustainable level. It is our view that utilising the 2007 UCS as an evidence base without reference to the market does not pick up the depressed demand that is likely to now exist. Recent corrections to the housing market now mean that housing land prices are at a much lower and arguably more affordable level than before. The implications are that some pdl may not be viable for housing development. Often brownfield sites have much higher development costs than Greenfield sites and so the yield from urban capacity will be much lower than anticipated in the 2007 study. One example is the employment allocation of the Adopted Local Plan located at 76-92 Main Road, Hawkwell. This site has been allocated for several years and has been available during the most recent rises in residential property prices during 2006-07. As a consequence the lack of progress on the site can only be described by its current occupancy and perhaps it comprises high value uses that do not encourage redevelopment. Despite this the site is identified as having high potential for alternative use and high potential demand. The SHLAA form notes that there is no information on legal constraints (e.g., tenancy agreements) As a consequence it is difficult to see how this could continue to be a potential site and as a consequence the allowance for green field releases should be increased.

2. There are considered to be other instances in the UCS and the recently published SHLAA where the assumptions and calculations would indicate that the 1301 urban capacity figure is over optimistic and the SHLAA assessment is limited. In the assessment of 'non-residential sites in appropriate locations' within the UCS assumptions are made as to the probability of sites coming forward for new housing. 68-72 West Street, Rochford is identified as a high probability site but we note that it has been subject to 7 refusals of planning permission/conservation consent. There is a significant gap between the urban capacity identified as being suitable by the Council and the capacity applied for by the owners. Given its alternate use value, it is debateable whether the two capacity figures can be reconciled. No 247 London Road is another example of a site allocated in the Local Plan but which hasn't come forward. This is now the subject of a proposal for a care home and if approved would further limit the scope for market/affordable housing capacity on the site. A striking example of how the urban capacity study has underestimated is also evidence by 2-4 Alderman's Hill, Hockley - described as a disused service station. There has been no residential development application on this site since 2004 and most recent applications have sought commercial use of the site. Rather than being evidence of housing land deliverability, this particular site evidences the need for commercial uses in the area. There are therefore deliverability doubts over these 'high probability' categories which amount to some 40 units.

3. In relation to the assessment in the UCS entitled 'intensification of existing residential uses' we note that the assessment is premised on an assessment of recent trends taking into account net completions between 2001-2006 and 2005-06. This is effectively an assessment of windfall trends and not an approach that PPS3 encourages. Importantly Table 3-12 in the urban capacity study seeks to project forward urban capacity from residential redevelopment - a period that benefited from high house prices and PPG3 guidance encouraging redevelopment. These two circumstances have markedly changed and so the assumptions and conclusions drawn would also have changed. Even taking into account the UCS discounting, the reliability of the 404 units from this source must be questioned and in our view the 1301 figure cannot be a sound basis for urban capacity and further Greenfield releases are necessary.

4. In the section of the UCS entitled 'subdivision of dwellings' and 'living above the shop' it is estimated that recent trends would result in 7 and 15 units. Our concerns with using trends as a basis for urban capacity are detailed above - PPS3 does not encourage this. Rather, local authorities are charged with surveying their areas, identifying which areas may yield urban capacity and how much and developing policies to achieve that. Government guidance does not encourage the estimation of windfalls in the way the UCS does.

5. Redevelopment of established employment land is a separate section within the UCS. At 1 above we identify the low probability of the Main Road residential allocation coming forward. This remaining section of the UCS considers 11 further employment sites which were first identified in the 2000 UCS. Three of these are considered to have a high probability of coming forward. We have looked at these three sites and can find no evidence that they are likely to come forward. In the 8 years between 2000 and 2008 the three identified high probability employment sites have not been developed and there is no reason to assume that the next 5-10 years will be any different. For example the Rawreth Industrial Estate is identified as being well used in the UCS and although it has some unneighbourly uses there is no indication that the site is available, suitable or deliverable for residential. Land between 39-69 Lower Lambricks, Rayleigh is identified as having a high probability of residential uses. Yet there is no

16928 Support

CHAPTER 6 Policy GB1 - Green Belt Protection

evidence of any pre-application advice or planning applications for this area. Stambridge Mills, Mill Lane, Stambridge is a further example. This site is separated from the urban area, in a flood risk zone and protected in the 2006 Replacement Local Plan by Policy EB9 which promotes B1 uses. Against this background there is only two relevant planning applications affecting this area both date from the early 1990's and relate to a plant room and loading bay. There is no evidence that this is likely to come forward for residential purposes in the next 5-10 years.

6. In the UCS extant permissions are identified as 856 dwellings. It is important to note that this figure needs to be continually reassessed so that from the point of adoption of the Core Strategy a 5 and 10 year housing land supply is available. The SHLAA notes extant permissions for 2009-14 being 106. As noted below extant permissions do not necessarily translate into deliverable sites. There is therefore a contingency that needs to be built in. Further allocations on greenfield land need to be increased and as such the quantum of housing in the area south of Hockley/Hawkwell should be increased to 330 dwellings in order to begin to meet the shortfall identified.

The District Council's 5 year housing supply assessment

7. The District Council's Annual Monitoring Report ("AMR") 2008 purports to demonstrate a 5 year housing land supply. The preamble to Table 4.10 in the AMR 2008 explains that Rochford District Council ("RDC") has included units under construction, units with full permission, units with outline permission, units with a resolution to grant, units subject to preapplication discussion/Urban Capacity Assessment and land allocations in its trajectory. The reader is referred to Appendix B which breaks down the sites in more detail. The recently published SHLAA also includes a table showing a potential 1273 dwellings deliverable. However, it refers to "appropriate brownfield sites." Since these 'appropriate sites' are do not benefit from an application or a planning permission it is difficult to programme them into the housing delivery trajectory.

8. In the full planning permission category of the AMR 2008 where work has not yet started there can be no guarantee that all these sites will be delivered in the 5 years. This comment relates to the one above in relation to the recently published SHLAA. It is not uncommon for permissions to be obtained to provide a means for valuing a site where the owner has no immediate plans to sell the site or develop housing. Delivery may also be hampered by funding constraints, or site assembly problems (where sites are in an alternative use or relocation constraints). Appendix B of the AMR 2008 does not set out the intentions of the landowner or whether the sites are truly achievable in the 5 year period as per PPS3 requirements. The SHLAA purports to show developer intentions at Appendix C but the assessment by the local authority into the legitimacy of some of the claims is not presented. The evidence base is not as full as it should be to demonstrate the robustness of Table 4.6 of the SCS. It is also unclear the extent to which this table is based on either the UCS 2007, AMR 2008, SHLAA 2009 or a combination of all three. This should be set out clearly.

9. In addition, to the 'non delivery' of a proportion of new homes in the AMR 2008, there is concern at the timings of delivery in that data set, for example, 10 units in 2008-2009 relates to outline planning permissions and it is doubtful whether reserved matters can be turned round quick enough to begin delivering housing in this year period. There could well be examples in that set of data where the delivery of units in the first year of the 5 is unlikely, thus delivery is reduced for that period and pushed back and this process is then compounded throughout the data set up to and beyond year 5. Statistical evidence from the Department of Communities and Local Government ("CLG") reveals that building starts are 43% down on the quarter to March 2009 compared with March 2008. It is not clear whether the recently published SHLAA has taken this into account and unless it does the data in the Table at 4.6 of the SCS cannot be relied upon, particularly given the current recessionary circumstances. In relation to the Table at Paragraph 4.6 a refinement is therefore needed to take into account this effect on phasing.

10. This problem is compounded for other units relied upon where permission has been granted but no start on site has been made; this accounts for a considerable number of sites in 2009-10 period (100 dwellings) which is (year 2 of the 5 year period). A delay in these will require more Greenfield sites to be identified in order to meet the shortfall.

11. Finally we note that the East of England Plan expresses its land supply requirement as a minimum. This strategy is not reflected in the

Core Strategy Submission Document

S - 16928 - 10009 - Policy GB1 - Green Belt Protection - None

16928 Support

CHAPTER 6 Policy GB1 - Green Belt Protection

Submission version of the Core Strategy policy H2.

12. In summary since neither the UCS nor the Annual Monitoring Report form a SHLAA, reservations are maintained about the degree to which sufficient housing land has been identified.

Policy H3

In the Preferred Options Core Strategy 2008 more locations were identified for housing growth in the post 2021 phase. Whilst it is our view that land south of Hockley/Hawkwell should benefit from a greater number of dwellings than the 175 currently identified (330) in order to make the strategy effective. We are concerned at the significant change in strategy between the Preferred Option Core Strategy and the Submission version, which has significantly less housing growth on green field sites. This change in strategy is so significant that we would question whether it is appropriate in the context of soundness and the consultation processes that have taken place so far.

We also have concerns as to how the Green Belt review strategy set out at Policy H3 and in the Local Development Scheme integrates with other policies in the SCS and feel that Green Belt review should be more explicit throughout the SCS. As it currently stands there is a potential conflict with national policies and limited justification for the Green belt strategy. We note that in Policy H3, which indicates the need for Green Belt land review, the advice is limited and unclear. In fact Policy H3 only pays lip service to the need for a Green Belt review and provides, at best, loose advice in this regard. It says that prior to 2021 Green Belt will be safeguarded save for the releases noted under Policy H2. Policy H3 then goes on to talk about land release for development after 2021 but no time period is set out to provide a framework for any Green Belt review in this latter period. In our view Policy H3 and Policy GB1/H2 should explain fully the need for a Green Belt review and that such a review should take place for a defined period. That such a review has not taken place in advance of the SCS is a serious matter for the Inspector to consider in the context of soundness. That said, it is considered that any review of Green Belt should have regard to a period beyond 2021 as indicated by draft Policy H3. Paragraph 1.9 of the East of England Plan explains "this RSS covers the period to 2021 but sets a vision, objectives and core strategy for the longer term". 2026 is therefore considered a minimum suitable period that any Green Belt review must have regard to in order to meet the 5 year land supply requirements in PPS3 for the period after 2021. However, Policy SS7 of the East of England Plan talks about Green Belt reviews up to 2031. In view of this and the need to explore the circumstances of Rochford - that existing settlements cannot contain future housing growth; that Green Belt is necessary to provide housing; and that these provide exceptional reasons to vary the Green Belt locally (paragraph 2.6 to 2.7 of PPG2) the policies and strategy for the SCS should identify a Green Belt review covering the period to 2031 and set out why a review is necessary. Not to do so is unsound for justification and effectiveness reasons.

Policy H4 - Affordable Housing

As currently drafted we feel that the policy is not concise enough and that the policy does not reflect current guidance. The phrase 'at least' would indicate that in most cases affordable housing above 35% will be sought. Our understanding is that the 35% figure is recommended in the SHMA and that to provide a policy framework which seeks to go beyond that figure would potentially be unworkable as many sites could not financially bare the burden of over a third of the net developable area not yielding a value. The policy should be redrafted so that "a target of 35% affordable housing shall be provided on all developments of 15 or more units..."

The last policy paragraph provides some scope to relax this policy, if there are clear site constraints that make on site provision impossible. The policy, though, is not particularly clear on what would constitute exceptional circumstances. For example, physical site constraints, which unusually raise development costs, would be one such reason and this should be specified. There may be other reasons including the nature of housing needs in the part of the District the site is located which justify affordable housing below the 35% target. Design reasons may also have a bearing on how provision is made and in what form, particularly if the site is in an historic area where design might override housing need argument. It is therefore recommended that the policy expand on the type of circumstances where affordable housing may be relaxed and the type of information that will be sought of applicant's who have a need to invoke this part of the policy.

Policy H5

In support of the policy, it is advantageous that no percentages requiring a specific mix are included. This flexibility will enable developers and the Council to respond directly to changing circumstances in the local housing market. In the past some authorities have set out a percentage for the type of housing they require only to find that after a few years of strict implementation there is an oversupply of property of that type and no flexibility in the policy to address the problem.

Policy ED2 - London Southend Airport

It is considered that to grow non aviation related employment at a location north of Southend Airport where sustainable access from the rest of Rochford District requires careful consideration. Most Airports are serviced by aviation related employment development and as such a location close to the airport is sensible and sustainable. However, for surface access reasons it would be inappropriate to encourage travel from Rochford's main settlements to what essentially

16928 Support

CHAPTER 6 Policy GB1 - Green Belt Protection

would be a rural location for general employment uses. Whilst sustainable access would be improved by a railway station and better bus links, there is no evidence to suggest that a sustainable surface access strategy for non related employment development at the Airport can be achieved. Paragraph 11.22 explains the critical importance of a railway station to the delivery of the strategy yet the Transport Chapter and Implementation Chapter provide neither a policy nor an assessment of deliverability. It is also notable that the South Essex Rapid Transit Policy T4, as set out at paragraph 10.16, notes that Rochford is not proposed to be served but may be served in future phases. This uncertainty is no way to plan for a major employment land supply strategy in the District. In relation to PPS12, the ability to deliver sustainable green field employment sites away from the top tier settlements of Hockley/Hawkwell, Rochford and Rayleigh is unsound.

Policy ED3

We fully support the first sentence of the Policy and note the apparent contradiction with the statements in Policy H1 and elsewhere which seeks to develop on alternative uses at industrial estates such as Eldon Way.

This contradiction is evidence in the second paragraph of Policy ED3. In our representations on Policy H1 we have explained why it is not sound to diminish the employment stock at Eldon Way and the importance of maintaining a dominance of employment type uses at this estate. These arguments are not repeated here.

We note the sentiments of the third paragraph and in accordance with our representations elsewhere are of the view that this sentence should be revised to explain that Eldon Way will accommodate principally employment type uses. As noted elsewhere uses which are an alternative to employment would diminish this highly sustainable employment site and this is unsound when assessed against National Policy.

Policy ED4 - Future Employment Allocations

In part, the de-allocation strategy is not supported as it is considered unsound when set against sustainability criteria. In relation to the Eldon Way Industrial Estate it is considered critical to the ongoing sustainability of this settlement that employment uses are maintained at this location. It is close to the railway station, bus routes and local residential areas from which the opportunity exists for employees to walk or cycle to work. Its location adjacent to the Town Centre offers opportunity for some retail and leisure development to complement the centre and to maintain a supporting function. These sustainable benefits would not occur with the deallocation of Eldon Way or the significant erosion of its employment floorspace. Whilst redevelopment of the employment site to achieve new employment is supported, the dominant land use should continue to be employment use. As a consequence, the 18ha of land required for employment in this policy is considered to be excessive and the policy should be reviewed to explain that redevelopment of existing employment sites for primarily new employment development will be encouraged.

Policy T4

It is noted that the South Essex Rapid Transit policy, as elaborated upon at paragraph 10.16 notes that Rochford is not served but may be served in future phases. This uncertainty is contrary to the delivery principles of soundness and directly puts at issue the employment land supply strategy in the District which is founded on sustainable access to new sites. In relation to PPS12, the ability to deliver sustainable green field employment sites away from the top tier settlements of Hockley, Rochford and Rayleigh is unsound.

Appendix H1, CTL1 - Infrastructure

It is recognised that necessary infrastructure provision is an important part of creating a sustainable development and in that context appendix H1 is supported. The supporting text notes that the table at Appendix H1 is not exhaustive and in that context it is very important that the framework properly distinguishes between what should be provided as part of new development schemes and what shouldn't. It is therefore essential that the framework acknowledges the importance of Circular 05/05 and the tests which say that provision of infrastructure and/or contributions should be:

- * Relevant to planning
- * Necessary to make the proposed development acceptable in planning terms
- * Directly related to the proposed development
- * Fairly and reasonably related in scale and kind to the proposed development
- * Reasonable in all other respects

As is made clear (Paragraph B9 of Circular 5/05) contributions should not be used to make good existing deficiencies in infrastructure provision. Nor are they to be used to secure contributions to the achievement of wider planning objectives that are not necessary for consent to be granted. In that context the Core Strategy should set this out as its policy framework.

Policy GB1 - Green Belt

16928 Support

CHAPTER 6 Policy GB1 - Green Belt Protection

The objectives of this policy are supported, although as noted in other representations the SCS is unsound as it does not meet the tests in relation to justification, compliance with national policy or effectiveness of strategy.

Policy GB1 mentions the objective to allocate the minimum amount of Green Belt land necessary. The policy should link to the requirements of PPG2 and RSS which are discussed in relation to the representations on Policy H2 and H3. The policy should set out a timeframe for the review and why Rochford requires a Green Belt review (what the exceptional circumstances are in this District that justify a review of local boundaries. The policy should be amended to set out a 2031 time frame and this may require the SCS to have an extended life span beyond 2021.

We would recommend the deletion of the word character since Green Belt designation is not related to landscape character as currently drafted. For clarity we would also recommend that the Policy or its supporting text explain that a Green Belt review will take place in support of an allocations document (paragraph 6.6) in order to identify an appropriate new boundary. This is particularly necessary given the commitment to a Green belt review in the adopted Local Development Scheme.

Policy CLT1 - Planning Obligations and Standard Charges

In view of the need to test fully the basis on which standard charges are based it is important that any document produced is in a development plan document that enables an examination in public. The policy should explain this in order that when the document is produced it accords with Policy and is based on sound evidence.

ENV9 - Code for Sustainable Homes

Object. The advice from the Department of Communities and Local Government is that the new requirement to have a rating against the Code does not make it mandatory to build a Code home or to have each new home assessed against the Code. It does however mean that all buyers of new homes be given clear information about the sustainability of the new home. A house builder can do this in one of two ways:

- they can choose to build a Code home, have that home assessed against the Code and provide the home buyer with a Code certificate stating the star rating the home has achieved
- or, they can choose to build to current building regulations standards, not to pay for an assessment and instead download a nil-rated certificate of non-assessment (also referred to as a nil-rating) to provide to the home buyer.

As such the Rochford policy requirement that coding 3 be achieved by 2010 and Code 6 by 2013 is out of step with Government advice. The policy wording should explain that it is just the coding that is a requirement of new homes and not necessarily that new homes should be constructed to achieve a standard.

The current Government objectives are for the code to be introduced over a reasonable period with development to be code 3 by 2010, code level 4 by 2013 and code level 5 by 2016. In this regard the policy, as drafted, seeks to achieve code 6 by 2013 and consequently compresses the code requirements into a shorter time scale with the costs associated expected to be subsumed within the housing market through higher prices. This is not a realistic strategy for the delivery of sustainable homes and we consider that the policy should be revised to extend the period of compliance but to also make it more flexible based on local circumstances.

Research undertaken on behalf of the Housing Corporation and English Partnerships, published in February 2007 'A cost review of the code for sustainable homes' reveals that code 6 is unlikely to be unattainable given existing technologies and that achieving code 5 could result in a 12% to 20% increase in costs that would have to be passed onto the consumer. Given the variability of the housing market with peaks and troughs, it is unlikely that the housing market would be able to subsume this level of price increase.

The code system policy as currently drafted does not have regard to site circumstances and so many of the requirements could be difficult to meet. For example, micro electricity generation on site may be difficult to achieve where local circumstances deter the capture of wind or solar power. If more expensive technologies are required to generate power than is the norm then costs will rise. There may be other competing reasons why designs cannot include certain sustainability measures if housing sites are in sensitive landscape and historic locations. Alternatively there may be significant development costs associated with site specific circumstances and so viability of the site's development becomes a valid consideration. By insisting on the code for sustainable homes other policy objectives such as affordable housing at particular rates and other contributions may need to be reconsidered. Consequently, we are of the view that this policy should be drafted in a manner which enables site specific circumstances to be taken into account. As noted above the Government explains that the code is a certification requirement and does not necessarily mean that buildings are constructed in accordance with a code level.

It is also important to note that it is not the purpose of planning legislation to duplicate other legislation. In this regard, the policy should accept that the Building Regulations will be the main vehicle for implementing this policy and that unless the coding requires external development then there will be no need to specify what is to be carried out in a planning application.

Core Strategy Submission Document

S - 16928 - 10009 - Policy GB1 - Green Belt Protection - None

16928 Support

CHAPTER 6 Policy GB1 - Green Belt Protection

Summary: Policy GB1 - Green Belt

The objectives of this policy are supported, although as noted in other representations the SCS is unsound as it does not meet the tests in relation to justification, compliance with national policy or effectiveness of strategy.

Policy GB1 mentions the objective to allocate the minimum amount of Green Belt land necessary. The policy should link to the requirements of PPG2 and RSS which are discussed in relation to the representations on Policy H2 and H3. The policy should set out a timeframe for the review and why Rochford requires a Green Belt review (what the exceptional circumstances are in this District that justify a review of local boundaries. The policy should be amended to set out a 2031 time frame and this may require the SCS to have an extended life span beyond 2021.

We would recommend the deletion of the word character since Green Belt designation is not related to landscape character as currently drafted. For clarity we would also recommend that the Policy or its supporting text explain that a Green Belt review will take place in support of an allocations document (paragraph 6.6) in order to identify an appropriate new boundary. This is particularly necessary given the commitment to a Green belt review in the adopted Local Development Scheme.

Full Text: I consider that Policy GB2 is Unsound as it is inconsistent with national policy, namely Planning Policy Statement 7.

There is no statement within PPS7 that retail or residential developments are unacceptable forms of development in the countryside. Paragraph 17 of PPS7 states that "re-use for economic development purposes will usually be preferable, but residential conversions may be more appropriate in some locations and for some buildings" It is therefore inconsistent to prevent retail and residential development as acceptable forms of farm diversification. This restriction is over bearing and unnecessary in relation to re-use of buildings and rural diversification.

Summary: I consider that Policy GB2 is Unsound as it is inconsistent with national policy, namely Planning Policy Statement 7.

There is no statement within PPS7 that retail or residential developments are unacceptable forms of development in the countryside. Paragraph 17 of PPS7 states that "re-use for economic development purposes will usually be preferable, but residential conversions may be more appropriate in some locations and for some buildings" It is therefore inconsistent to prevent retail and residential development as acceptable forms of farm diversification. This restriction is over bearing and unnecessary in relation to re-use of buildings and rural diversification.

Change to Plan Revise the policy as follows,

Remove the words "small-scale" from first, second and third bullet points.
Delete "Retail (with the exception of farm shops) and residential development are not considered acceptable forms of rural development."

Full Text: The document as drafted is unsound as it appears to be neither justified or effective. There is insufficient detail in the document on the need for an additional policy to an area where a number of proposed Core Strategy policies apply and on this basis the policy deficit which would justify the need for Policy URV.1 is unclear. Additionally, it is unclear from the policy as to how the wider recreational and biodiversity objectives of the policy will be delivered, who will deliver them and when they will be delivered.

Summary: The document as drafted is unsound as it appears to be neither justified or effective. There is insufficient detail in the document on the need for an additional policy to an area where a number of proposed Core Strategy policies apply and on this basis the policy deficit which would justify the need for Policy URV.1 is unclear. Additionally, it is unclear from the policy as to how the wider recreational and biodiversity objectives of the policy will be delivered, who will deliver them and when they will be delivered.

Change to Plan Policy URV.1 should be deleted as it is neither justified or effective. If it is retained it should be amended to include a spatial commitment from the Council to review / delineate an area to which this policy applies. It should also be amended to identify which Development Plan Document will be the key delivery mechanism for this policy and this should be cross-referenced to the Monitoring and Implementation Framework (MIF). The implementation section of the MIF should comprehensively include landowners (upon whom delivery is critical) and further detail on the process and additional strategies the Council will use to justify CPO action.

In the absence of any initial HRA work and given the proximity of growth locations to the SPA and SAC sites in Rochford at this late stage of the document preparation, it is questionable that the strategy can be delivered. Can the proposed strategy (in particular policies H2 and H3) be delivered without an adverse affect on European Habitats?

Summary: The document does not refer to any preliminary Habitat Regulation Assessment (HRA) work and there is no acknowledgement of an HRA on the Council's website and or from speaking to the Council's Planning Policy team. In the absence of any initial HRA work and given the proximity of growth locations to the SPA and SAC sites in Rochford at this late stage of the document preparation, it is questionable that the strategy can be delivered. Can the proposed strategy (in particular policies H2 and H3) be delivered without an adverse affect on European Habitats?

Change to Plan The document should not be submitted without either an HRA or a statement from Natural England that an Assessment is not required in accordance with Regulations 85A and 85B of the associated European Habitats Directive. The absence of any information on HRA at this late stage of the document preparation makes it difficult to assess or comment on the deliverability or otherwise of this document, and ultimately its soundness. On this basis the document could be unsound without this necessary evidence, particularly given the emphasis on growth locations adjacent to the Crouch Estuary and Foulness SPAs and the Crouch Estuary SAC. A more precautionary approach would be to direct growth to those sustainable locations remote from the SPAs and SACs such as Hockley.

By 2017 - the fourth bullet point states that strategically located and planned developments are predominately situated within areas least at risk from flooding

PPS25 advises that the key aim of managing risk would seek to only permit development in areas of flood risk when there are no reasonable available sites in areas of lower flood risk.

The sequential test should be used to demonstrate that the land developed is the lowest possible risk and the exception test should only be used when it has been demonstrated that there are no available sites available on sites in lower risk areas.

The Core Strategy advises that there are available sites in lower risk areas, therefore, this proposal would be contrary to PPS25.

Amend text of the second sentence of fourth bullet:

â€œ '... These strategically located and planned developments are situated within areas least at risk from flooding.'

Full Text: ROCHFORD CORE STRATEGY SUBMISSION DOCUMENT, SEPTEMBER 2009
RESPONSE OF ESSEX COUNTY COUNCIL

1. General Comment

Essex County Council welcomes and broadly supports the Core Strategy prepared by Rochford District Council. The Strategy contains policies and proposals that address the spatial characteristics, issues and opportunities facing the District whilst respecting the distinctive qualities of the different settlements and parts of the District.

The County Council fully supports the maintenance of a strong policy approach to protection of the Green Belt and of the quality of environmental assets in the District whilst making adequate housing and employment provision within the District. The Core Strategy presents an approach that emphasises a balance of opportunity through the District and recognition of emerging economic prospects in the District and neighbouring areas. The intended preparation of more detailed Action Area Plans for London Southend Airport and its environs and for each of the three town centres of Rayleigh, Rochford and Hockley will further enhance the approach of the Core Strategy. The emphasis on the three town centres is particularly welcomed as offering a stimulus to improvement in the services and facilities available locally within the District whilst also affording possibilities of increased community focus.

2. Housing Distribution and Locations

The East of England Plan requires Rochford to provide a minimum of 3,790 additional dwellings between 2006 and 2021. In addition, provision for a further 1,000 dwellings should be made between 2021 and 2025 to ensure delivery of housing for at least 15 years from adoption of the Core Strategy (expected in 2010). Of this total requirement the District Council has identified a capacity of 2,000 dwellings through a Strategic Housing Land Availability Assessment. This means that the Core Strategy has to identify locations for about 1,750 dwellings to be delivered before 2021 and a further 1,000 dwellings between 2021 and 2025.

Policy H1 (The efficient use of land for housing) is supported. However, prioritisation of the reuse of previously developed land within settlements for additional housing is unlikely to provide a sufficient source of provision due to the generally residential nature of existing settlements in the district and the absence of potentially large sites of previously developed land. The assessment of potential for additional housing provision within settlements already includes the proposed re-allocation to substantially residential use of 4 existing employment areas.

Within Policy H2 (Extensions to residential envelopes and phasing) and Policy H3 (Extension to residential envelopes post-2021) the District Council has adopted a balanced approach to the distribution of additional housing locations, which is based on identification of tiers of settlements defined by reference to their accessibility to jobs, services and facilities (some of which lie outside the District) and the need to protect the valued environments within the District. This approach is generally supported, although implementation and delivery of individual schemes should give further thought to securing sustainable functional relationships between proposed development locations and availability of jobs, services and facilities.

The proposed scale and phasing of development at each of the identified locations in Policy H2 and Policy H3 should be capable of being supported by County Council service groups, provided that adequate and timely funding is available. The County Council would wish to work with the District Council to ensure that future infrastructure and facilities would serve and give benefit to the existing adjoining community as well as to the new development. In this respect it is noted that the Core Strategy proposes preparation by the District Council of a Planning Obligations and Standard Charges document (Policy CLT1). The District Council's document should fully reflect the County Council's own approach to this matter as set out in the County Council's 'Developer's Guide to Infrastructure Contributions'.

3. Economic Development

The approach to Employment Growth (Policy ED1) is supported. Given the economic structure of Rochford District the support to be given to protection and enhancement of the role of small and medium sized businesses; enhancement of the District's commercial centres; and development of a skills training academy is particularly welcome. These measures will assist in building on the existing economic resource of the District.

Proposals for the comprehensive development of London Southend Airport and its environs (Policy ED2) are supported.

Core Strategy Submission Document

16698 Object

CHAPTER 8 Historical and Archaeological Sites, 8.15

The further elaboration of proposals through an Area Action Plan will provide a firm foundation to realise the economic regeneration and growth opportunities presented by effective use of the Airport. The recognition of the potential environmental impact of the Airport and the commitment to work to mitigate any adverse impacts on the environment and local amenities is fully supported.

The location of the proposed Eco-Enterprise Centre to the North of London Southend Airport (Policy ED4) is supported. Creation of the Centre would assist reduction of the rate of business start-up failure in the district. Further the proposed location for the Centre would afford a clear offer to businesses within an area of varied business activity.

The continued protection and enhancement of existing employment land (Policy ED3) is supported, as is the identification of 4 existing employment sites for appropriate alternative, substantially residential, uses. Each of the 4 sites affords particular issues and opportunities whereby their redevelopment for other uses and relocation of existing occupiers would confer advantage for the immediately neighbouring areas and for the District as a whole.

4. Town Centres

The town centres of Rayleigh, Rochford and Hockley, and future plans for them, are closely linked to the economic development of the District but also present the opportunity to offer greater community focus within the District. The varied approach being taken to each of these town centres is supported (Policy RTC4, RTC5 and RTC6), notably the recognition of the role and purpose of the town centres beyond retail uses.

The contribution that the County Library service could make to plans for the town centres should not be overlooked. The 5 libraries in the District are substantial footfall draws in their localities and act as a 'community anchor store'. This has knock-on effects in encouraging use of neighbouring retail and service facilities. Further the Library service is currently looking at co-location opportunities for other services within the libraries which would enable them to act as a community focus.

5. Transport

The transport aspects of the Core Strategy are well balanced in identifying potential measures that would meet the needs of existing residents and businesses in the District as well as needs arising from future development. The approach reflects and makes good reference to the transportation aspirations of the County Council. The policy emphasis on close working between the District Council and the County Council to advance the transport aspirations is welcomed and fully supported.

In relation to parking standards (Policy T8 and Paragraph 10.30) the review undertaken by Essex County Council in conjunction with the Essex Planning Officers Association has now been completed. Revised parking standards have been agreed and signed off as County Supplementary Guidance, in accordance with PPS12, and is being applied by the County Council as Local Highways Authority.

6. Coastal Protection Belt

Policy ENV2 (Coastal Protection Belt) is not supported because in its current form it is not a suitable or effective replacement policy for Policy CC1 of the Replacement Structure Plan. Structure Plan Policy CC1 (The Undeveloped Coast - Coastal Protection Belt) currently remains a 'saved' policy of the Essex and Southend-on-Sea Replacement Structure Plan, April 2001 (following a direction of the Secretary of State, dated 27th September 2007, under paragraph 1(3) of Schedule 8 to the Planning and Compulsory Purchase Act 2004). The existing Policy CC1 reads, 'Within the Coastal Protection Belt defined in adopted local plans there shall be the most stringent restrictions on development within the rural and undeveloped coastline situated outside existing built-up areas, and any development which is exceptionally permitted within this Belt shall not adversely affect the open and rural character, historic features or wildlife.'

Core Strategy Policy ENV2 should be revised to include specific reference to,

- * Definition of the boundary of the Coastal Protection Belt in another Development Plan Document;
- * the application of the most stringent restrictions on development within the rural and undeveloped coastline;
- * any development exceptionally permitted not adversely affecting the open and rural character, historic features or wildlife.

7. Historic Environment

The importance of the historic environment in Rochford District is clearly identified within the Core Strategy document. Nevertheless, the policy guidance could be usefully enhanced to promote consideration and enhancement of the historic environment and use of the historic environment to shape place. This would be achieved by the following amendments to the Core Strategy,

- * Policy ENV1 (Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites) should be amended by deletion of the final sentence and its replacement with, The Council is committed to the protection, promotion and enhancement of the diverse historic landscape and extensive surviving archaeological deposits of the District.

16698 Object

CHAPTER 8 Historical and Archaeological Sites, 8.15

* Paragraph 8.15 of the supporting text should be amended to better support the suggested amendment to Policy ENV1. The existing text of Paragraph 8.15 should be deleted in its entirety and replaced by,
The historic environment of Rochford District has developed through a history of human activity that spans over 450,000 years. Much of the resource lies hidden beneath the ground in the form of archaeological deposits. Other elements such as the historic landscape, the pattern of field, farms, woods and grazing marsh which characterise the District, are a highly visible record of millennia of agriculture, industry and commerce. Of particular significance are the coastal, island and estuarine areas where multi-period landscapes reflecting the exploitation of coastal and marshland resource survive. The District also includes the important historic medieval market towns of Rochford and Rayleigh.

* Page 16 (Sustainable Community Strategy Priority: Promoting a Greener District) should be amended to further support the approach to the Historic Environment. The fourth bullet of the Key Section/Policies of the Core Strategy should be amended to include the word 'historic', so that the first sentence of the bullet would read,
The Environment chapter seeks to protect and enhance the biodiversity, historic and natural environment of the District by protecting sites of local, national and international importance.

8. Community Infrastructure

The approach to Community Infrastructure is supported. The County Council would wish to work with the District Council to ensure that future community infrastructure and facilities would serve and give benefit to the existing adjoining community as well as to the new development. In this respect it is noted that the Core Strategy proposes preparation by the District Council of a Planning Obligations and Standard Charges document (Policy CLT1). The District Council's document should fully reflect the County Council's own approach to this matter as set out in the County Council's 'Developer's Guide to Infrastructure Contributions'.

In addition, it should be noted that,

* Some County Council services are not highly visible despite being regarded as highly desirable community services by local residents. The need to ensure adequate funding and contributions to enable these services to meet community expectations should be recognised and acknowledged in consideration of planning obligations and standard charges.

* The Adult Community Learning Centre at Rocheway, Rochford could be better located with regard to the wider Rochford/Castle Point area of service. Relocation of the Centre could provide opportunities both at the new location and for the current site.

* The Core Strategy should make specific reference to,

o Appendix H1, Location at South Canewdon: new Early Years and Childcare facilities;

o Policy CLT2, final sentence: insert after the words 'primary schools' the words 'and Early Years and Childcare facilities';

o Appendix CLT1, Other issues/comment: for Early years and childcare facilities add 'Land to be allocated within new residential areas, as appropriate'.

9. Implementation, Delivery and Monitoring

The inclusion in the Core Strategy of a section considering Implementation, Delivery and Monitoring is welcomed and supported. Nevertheless, the District Council, in moving towards implementation and delivery of the individual elements of the Core Strategy, should highlight those schemes and projects that are critical to achievement of other aspects of the Strategy.

Further, the monitoring proposal for Policy H6 (Lifetime Homes) and for Policy CP1 (Design) should be amended,

* Policy H6 (Lifetime Homes) - the identified monitoring tool is Core Indicator H6 Housing Quality Building for Life Assessments. The Building for Life Assessment methodology was devised to measure the overall design/layout quality of housing developments. It was not devised to measure compliance with Lifetime Homes, which is largely, but not exclusively, concerned with internal space standards and the provision of internal arrangements within dwellings to meet needs of all residents.

* Policy CP1 (Design) - the monitoring indicator proposed by the Core Strategy is not supported because it is unclear what the indicator would actually be measuring. The proposed indicator should be replaced by the Core Indicator, Housing Quality - Building for Life Assessments, as suggested by the County Council in its response to the Core Strategy Preferred Options, October 2008. A better approach would be to base evaluation and monitoring of Policy CP1 on the Commission for Architecture and the Built Environment's (CABE) 20 Building for Life principles, particularly as Government has endorsed these principles and is urging local authorities to use them to assess design quality. It is suggested that the monitoring arrangements for Preferred Option CP1 be deleted and replaced by the following text, 'The success of the implementation of this policy will be monitored by assessing schemes, or an appropriate sample of schemes, against the Commission for Architecture and the Built Environment's (CABE) Building for Life principles.'

10. Access to Housing

The Core Strategy notes the higher prevalence of older people in Rochford District and the need to support them. However, a more broadly based approach to access to housing should be adopted by Policies H4, H5 and H6. It should recognise the presence of other vulnerable adults in the community, for example, those with learning or mental health disability, and the range of possible forms of accommodation, including supported, sheltered and extra care accommodation. The high level of owner occupation in the District further emphasises the need for a broader approach. The emphasis on Lifetime Homes would not address the variety of future needs, whilst the potential exemptions to the

Full Text: ROCHFORD DISTRICT COUNCIL - LOCAL DEVELOPMENT FRAMEWORK CORE STRATEGY SUBMISSION
SEPTEMBER 2009

Icen Projects Ltd (Icen) has been instructed by Colonnade Land LLP (Colonnade) to submit representations to the Rochford Local Development Framework Core Strategy Submission (CSS).

a) Overview

It is our conclusion that the CSS is not justified, effective or consistent with national policy, as required by Planning Policy Statement 12: Creating Strong Safe and Prosperous Communities through Local Spatial Planning (PPS12) and is therefore vulnerable to being found unsound by an Inspector through the Examination in Public.

b) Background and Summary

These representations follow those made by Icen on behalf of Colonnade to the Preferred Options Core Strategy, submitted via letter dated 17 December 2008. In this regard, we would request that the Council confirms that the representations made to the Preferred Options Core Strategy will be taken into account alongside the current representations, particularly as there are a number of cross references between the two sets of representations.

It is not considered necessary to reiterate the content of the previous representations, as they were made at the appropriate stage and will be considered by the Planning Inspectorate in due course, but it is inevitable that certain elements will require restating where it is not clear that they have been taken into account in the production of the CSS. For clarity, therefore, Colonnade feel that it is appropriate to clarify the 'in-principle' issues that were raised in the representations to the Preferred Options Core Strategy, recognising that these issues were raised in the context of a wider and more coherent justification made within the representations:

- â€¢ Further cross-referencing of the recommendations made within the evidence base is required;
- â€¢ Greater focus should be placed on promoting Rochford as the principal settlement within the District;
- â€¢ Coombes Farm is the most logical location for residential development abutting the urban area of Rochford and as such warrants recognition as a general location for residential development;
- â€¢ The allocation of Three Ashes Farm for employment generating uses will be pursued;
- â€¢ Recognition that it is not realistic to expect residential allocations to be met mainly on Brownfield sites, nor should the intensification of smaller sites in residential areas be pursued;
- â€¢ Many of the sites identified as suitable for residential development will not be viable and will not come forward for development within the timescales anticipated;
- â€¢ The failure to provide the necessary justification for the proposed infrastructure improvements sought in Appendix H1;
- â€¢ The inclusion of an affordable housing exception policy was sought; and
- â€¢ The need to identify sites capable of delivering employment growth in the short term.

Following assessment of the CSS presented by the Council for consultation prior to submission to the Secretary of State, Colonnade considers the Plan to be 'unsound' as the document consistently fails to meet the tests of soundness set out in the table following Paragraph 4.52 of PPS12. For clarity, PPS12 confirms that to be 'sound' a Core Strategy should be JUSTIFIED, EFFECTIVE and consistent with NATIONAL POLICY and defines 'justified' as "founded on a robust and credible evidence base" and "the most appropriate strategy when considered against the reasonable alternatives" and 'effective' as "deliverable", "flexible" and "able to be monitored".

The rationale for the above is identified in the remainder of these representations, which are provided in the interests of ensuring the Council delivers a strong, robust and logical Core Strategy that guides the future development of the District in a justified and effective manner.

b) Colonnade

As the Council is aware from previous submissions to the Local Development Framework, Colonnade is a strategic land company with a particular interest in the future development of the District as a consequence of a number of sites that it controls, particularly around Rochford.

The Council will also be aware that Colonnade has recently submitted an outline planning application for the residential development of the land at Coombes Farm, Rochford to provide a sustainable urban extension comprising up to 326

Core Strategy Submission Document

O - 16254 - 9177 - Policy ENV1 - Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites - i

16254 Object

CHAPTER 8 Policy ENV1 - Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites

residential dwellings, with associated accesses and community uses. Whilst the planning application process is clearly separate from the Local Development Framework production process, Colonnade wishes to continue the promotion of the site as a suitable location for residential development.

Accordingly, these representations focus on the legal requirements and tests of soundness associated principally with the Housing and Employment chapters of the CSS, with reference where appropriate to the sites that are controlled by Colonnade, the outline planning application at Coombes Farm and other issues where relevant.

c) Housing

i. Date of Adoption

The CSS assumes an adoption date of 2010 and plans for the provision of housing to 2025.

Taking account of the potential delays to the adoption of the Plan, including the Examination process, it would be more appropriate for the CSS to provide sufficient flexibility to allow for delays in its adoption. Colonnade considers an adoption date of 2011 for the CSS is a more realistic target.

Taking account of the advice in Paragraph 4.13 of PPS12, which states that the time horizon for the Core Strategy should be "at least 15 years from the date of adoption" it would be appropriate for the CSS to plan for the provision of housing to 2026 at the earliest. As such, Colonnade does not consider the CSS to be 'flexible' in the context of the tests of soundness in the table following Paragraph 4.52 of PPS12.

ii. Housing Delivery

However, setting the above aside, the Housing Chapter identifies the minimum housing delivery target for the period 2001 to 2021 of 4,600 dwellings as set out in the East of England Plan, with the annual average requirement of 250 dwellings per annum to extend provision from 2021 to 2025. It also confirms that the residual target for the period 2006 to 2021 is 3,790 dwellings, taking account of the delivery of 810 dwellings in the period 2001 to 2006, and a further 618 dwellings have been completed between 2006 and 2008.

This leaves a residual housing provision target of a minimum of 3,172 dwellings in the period 2008 to 2021. Taking into account the required provision beyond 2021, the residual housing provision target in the period 2008 to 2025 is a minimum of 4,172 dwellings. The disparity between these figures and those provided within the CSS are explained by the rounding down of the annual average delivery requirement in the period 2006 to 2021 to 250 dwellings per annum, compared with the actual figure of 252.67.

The table at Paragraph 4.6 of the CSS identifies the source of housing provision that will meet the identified minimum requirements and includes figures for 'Extant Planning Permissions' and 'Existing allocations/other appropriate sites identified in Strategic Housing Land Availability Assessment'. These figures, along with the actual completions within the period are combined to produce the figure for the 'Total without Green Belt release' figure.

Setting aside the concern regarding under-provision associated with the rounding down of the annual average delivery requirement in the period 2006 to 2021, the CSS fails to identify the sites that will contribute to the 'Extant Planning Permissions' provision. The identification of the sites that will contribute to the 'Extant Planning Permissions' should be provided in the context of the findings of the Inspector in the appeal by Asprey Homes [APP/G5180/A/07/2043219/NWF] who determined that the reliance on a delivery rate of 100% is unsafe [IR287].

Furthermore, at the time of writing these representations, the Strategic Housing Land Availability Assessment 2009 has not been published. It is impossible therefore for a full assessment of the proposed housing provision to be undertaken to confirm whether the CSS is 'founded on a robust and credible evidence base' [test of soundness in the table following Paragraph 4.52 of PPS12].

iii. Redevelopment of Employment Sites

Paragraph 4.14 of the CSS refers to the identification of the four employment sites that are considered by the Council to be suitable for redevelopment to residential use. However, the failure to publish the Strategic Housing Land Availability Assessment 2009 either before or alongside the publication of the CSS means that the assumptions made by the Council as to the suitability, availability, viability and deliverability of the sites cannot be assessed.

It has been necessary, therefore, to review the assumptions made in the Rochford Urban Capacity Study 2007 (UCS) regarding the sites. Within the section of the UCS entitled 'Redevelopment of Established Employment Land' [pages 22 & 23] includes a list of those sites assessed, their indicative capacities and the probability of residential development coming forward at the sites within the plan period (identified elsewhere as 2001 - 2021). The list includes the four sites identified in the CSS of Eldon Way/Foundry Estate, Hockley; Rawreth Lane Industrial Estate, Rayleigh; Stambridge Mills; and Star Lane Industrial Estate, Great Wakering.

In total, the UCS identifies an indicative residential redevelopment capacity of 486 units on the four sites (118, 220, 60 and 88 respectively). Of these, it identifies the Rawreth Lane Industrial Estate and Stambridge Mills as having a 'high'

Core Strategy Submission Document

O - 16254 - 9177 - Policy ENV1 - Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites - i

16254 Object

CHAPTER 8 Policy ENV1 - Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites

probability of coming forward for development in the Plan period (2001 - 2021), which would deliver 280 residential dwellings using the Council's own figures. The Star Lane Industrial Estate (referred to in the UCS as the Star Lane Brickworks) is identified as having a 'medium' probability of coming forward for development in the Plan period, with capacity to deliver 88 residential dwellings. It is unclear, therefore, where the figure for 'Existing allocations/other appropriate sites identified in Strategic Housing Land Availability Assessment'.

Set against this is the identification of these four sites in the CSS as being capable of delivery for residential development within the Plan period, with 671 units delivered between 2006 and 2015 and a further 506 units between 2015 and 2021.

The UCS also states in the same section that:

"There are considerable areas of land in the district that are currently allocated for, and in use as, employment land. The redevelopment of such sites for residential use would reduce demand for residential development on greenfield sites, but would at the same time create a need for alternative sites to be found for employment. Such an approach, which would be likely to require the decontamination of existing employment land to make it fit for residential use, together with development of a greenfield site and implementation of additional infrastructure to serve the new employment area, may well be unsustainable." [our emphasis]

The UCS appears to confirm therefore, that not only would the redevelopment of the four sites listed in the CSS be unlikely within the Plan period, but also potentially unsustainable. In this regard, it is notable that the promoters of Stambridge Mills sought the Screening Opinion of the Council as to whether Environmental Impact Assessment of the planning application for the redevelopment of the site for residential use was required in 2007, but to date are yet to submit a planning application for the redevelopment of the site.

In light of this, Colonnade does not consider the CSS is 'the most appropriate strategy when considered against the reasonable alternatives' [test of soundness in the table following Paragraph 4.52 of PPS12], which include the provision of residential development in East Rochford.

iv. Strategic Housing Growth to the East of Rochford

Furthermore, whilst paragraph 2.62 of the CSS identifies concern relating to the identification of locations to the east of Rochford for development on the basis that 'vehicular movements would inevitably be directed through Rochford's historic core', the CSS later identifies Stambridge Mills as a suitable site for residential redevelopment.

In light of the evident conflicts between the evidence base provided in support of the CSS and the absence of other evidence, the CSS is not considered 'sound' in the context of the tests of soundness in the table following Paragraph 4.52 of PPS12.

v. Housing Trajectory

Paragraph 4.28 of the CSS confirms that policies H1, H2 and H3 of the CSS will deliver housing supply as illustrated in the Housing Trajectory at Appendix H2. This Housing Trajectory is transposed from the 2008 Annual Monitoring Report (AMR).

Whilst on the face of it, the Housing Trajectory appears to confirm that the Council can meet its requirement to identify a five year housing supply, many of the sites identified within the AMR do not conform to the guidance issued by CLG in August 2008, on the assessment of a five year land supply. The guidance identifies sites that can be included within the five year assessment of housing supply as:

"those that are allocated for housing in the Development Plan, sites that have planning permission (outline or full planning permission that has not been implemented) and specific, unallocated brownfield sites that have the potential to make a significant contribution to housing delivery during the 5 year period".

Table 4.10: Projected Net Completions of the AMR confirms that the five year housing land supply figure includes sites from 'other land allocated for residential purposes', which are based on land allocations outside existing settlements. However, it should be clarified that these land allocations are not currently allocated for housing development in an adopted Development Plan. As such, these unallocated greenfield sites that are yet to make significant progress through the planning system should be discounted and the five year housing land supply recalculated.

The table below has been prepared to confirm the extent of the shortfall should the sites from 'other land allocated for residential purposes' be removed from the calculation of the Rochford five year housing land supply, in accordance with the guidance issued by CLG:

Recalculated Five Year Housing Land Supply (2009 - 2014):

Year
1st April 2009 to 31st March 2010
Predicted Delivery (A)

Core Strategy Submission Document

O - 16254 - 9177 - Policy ENV1 - Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites - i

16254 Object

CHAPTER 8 Policy ENV1 - Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites

106 dwellings
Allocations on 'other land allocated for residential purposes' (B)
0
Residual delivery (A-B)
106 dwellings
Delivery Shortfall
0

Year
1st April 2010 to 31st March 2011
Predicted Delivery (A)
217 dwellings
Allocations on 'other land allocated for residential purposes' (B)
150
Residual delivery (A-B)
67 dwellings
Delivery Shortfall
150

Year
1st April 2011 to 31st March 2012
Predicted Delivery (A)
544 dwellings
Allocations on 'other land allocated for residential purposes' (B)
300
Residual delivery (A-B)
244 dwellings
Delivery Shortfall
300

Year
1st April 2012 to 31st March 2013
Predicted Delivery (A)
395 dwellings
Allocations on 'other land allocated for residential purposes' (B)
375
Residual delivery (A-B)
20 dwellings
Delivery Shortfall
375

Year
1st April 2013 to 31st March 2014
Predicted Delivery (A)
300 dwellings
Allocations on 'other land allocated for residential purposes' (B)
300
Residual delivery (A-B)
0 dwellings
Delivery Shortfall
300

TOTAL

Predicted Delivery (A)
1,562 dwellings

Allocations on 'other land allocated for residential purposes' (B)
1,125 dwellings

Residual delivery (A-B)
437 dwellings

Delivery Shortfall
1,125 dwellings

The above table confirms that the removal of the 'other land allocated for residential purposes' from the calculation of the Rochford five year housing land supply leaves the Council with a minimum net additional housing delivery of 437 dwellings, which equates to a supply of 1.7 years based on the adjusted annual delivery target of a minimum of 255 net

Core Strategy Submission Document

O - 16254 - 9177 - Policy ENV1 - Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites - i

16254 Object

CHAPTER 8 Policy ENV1 - Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites

additional dwellings per annum. As such, the Council is failing to meet its requirement to demonstrate a five year housing land supply in accordance with PPS3 and the supporting guidance provided by CLG. It is notable that the recent application by David Wilson Homes at Land between Main Road and Rectory Road and Clements Hall Way, Hawkwell identifies an even greater shortfall in the Council's five year housing land supply.

In addition to the above, the AMR does not include a commentary on how deliverability has been assessed against the requirements of paragraph 54 of PPS3.

Furthermore, the guidance from CLG confirms that the windfall sites cannot be relied upon in demonstrating a five year supply unless a Local Planning Authority can demonstrate genuine local circumstances exist to allow this exception. However, the second paragraph of the section entitled 'Housing Trajectory and Five Year Housing Supply' confirms that the estimated completions in the years 2008 to 2013 includes estimated yields through 'intensification' coming forward in future years. With reference to the definition of 'intensification' on page 13 of the AMR, it appears that the 'Housing Trajectory and Five Year Housing Supply' also includes provision for windfall sites. As such, the Council is required to demonstrate the 'genuine local circumstances exist to allow this exception'.

The pressures on delivery and need for additional sites are more acute when it is considered that an average delivery rate of 204 dwellings per annum was achieved during a strong period of housing market growth. In view of the current economic downturn, and significant problems faced within the housing market, the Council should seek to identify appropriate and deliverable sites to meet its regional housing target provision commitments. Suitable sites would include Coombes Farm, which has been positively promoted for development through the LDF process.

It may, therefore, be more appropriate for the Council not merely to allocate sufficient sites to meet the minimum targets set down by the East of England Plan, but to identify a reservoir of land capable of coming forward for development should the sites identified through the CSS and Allocations Development Plan Documents (DPD) fail to come forward for development within the anticipated timescales.

vi. Appendix H1

As set out in the representations to the Preferred Options Core Strategy, there is continuing concern that the list of improvements to infrastructure required in support of residential development as set out in Appendix H1 fails to provide the necessary justification for its inclusion. Whilst the preamble seeks to clarify why the infrastructure is sought, the inclusion of this list should be fully justified, otherwise it is of little value. Furthermore, it would be of benefit to provide further details of the existing community infrastructure provision and capacity within the evidence base.

The failure to provide the necessary justification for its inclusion means that the CSS will not be 'founded on a robust and credible evidence base' [test of soundness in the table following Paragraph 4.52 of PPS12].

d) Character of Place

As set out in the representations to the Preferred Options Core Strategy, Colonnade considers that, with respect to the requirement to produce and adhere to Development Briefs for large residential developments, as set out in Policy CP1, the Council should not seek to impose further demands on developers where existing regulations provide sufficient requirements regarding design. In this instance, Design and Access Statements provide sufficient design guidelines for developments and there is no additional information provided in the policy or supporting text that clearly sets out the justification for this requirement.

e) Green Belt

With reference to the comments regarding the redevelopment of employment sites under the 'Housing' section above and the requirement to allocate sufficient land to meet the minimum housing provision targets as required by the East of England Plan, Colonnade considers that the chapter on Green Belt, and policy GB1 in particular, fails to provide the necessary evidence base that will allow it to be monitored effectively.

It is inherent that the proposed redevelopment of previously developed employment sites for residential use in order to reduce the requirement to allocate previously undeveloped land for residential use will displace these employment uses. In turn, therefore, the separate allocation of previously undeveloped Green Belt to accommodate the compensatory employment provision is required. This is accepted in principle at paragraph 11.11 of the CSS.

Without providing clarification of the anticipated quantum of land required to accommodate the provision of housing and compensatory and new employment land, it is not possible to monitor the performance of policy GB1.

However, using the Council's figures in the table setting out the breakdown of the housing provision figures in Chapter 4 of the CSS (assuming that actual completions and extant permissions are all on previously developed land), setting aside the displacement of employment uses referred to above, approximately 42% of the required minimum housing provision target is capable of being accommodated on previously developed land (2,005 units from a total of 4,750). As such, the Council is required to provide at least 58% of the required minimum housing provision target on the Green Belt (2,745 units from a total of 4,750).

Core Strategy Submission Document

O - 16254 - 9177 - Policy ENV1 - Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites - i

16254 Object

CHAPTER 8 Policy ENV1 - Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites

If these figures are adjusted to take account of the displacement of employment uses (assuming the provision of an equal quantity of land is required to compensate for the employment land that is redeveloped), this figure changes to 17.5% on previously developed land and 82.5% on Green Belt (828 and 3,922 units from a total of 4,750 respectively). Even allowing for the achievement of higher densities of employment on new developments, the figures above are unlikely to change significantly.

Furthermore, the table in Chapter 4 also confirms that no previously developed land will be available for development beyond 2021, or 2015 if account is taken of the displacement of the employment uses.

In light of this, not only does Chapter 6 fail to provide the necessary evidence base that will allow it to be monitored effectively, it is also necessary to consider whether it presents the most appropriate strategy for addressing the required release of Green Belt land to accommodate the defined housing and employment delivery targets to 2025 and beyond as necessary. Colonnade considers a more robust approach that is flexible and capable of being monitored, would be to clearly identify those sites capable of delivery in the short term, which for the avoidance of doubt includes those sites being promoted by Colonnade, with a reservoir of alternative sites set aside for future growth.

As set out in the representations to the Preferred Options Core Strategy, Colonnade considers that the inclusion of an affordable housing exception policy within the CSS will aid the delivery of community housing within rural areas. However, the CSS does not contain such a policy, or adequately address the issue of community housing within rural areas and the CSS is not considered to provide sufficient flexibility to allow for the delivery of essential rural housing.

f) Environmental Issues

Colonnade has concerns regarding the justification for and effectiveness of a number of the policies contained within the Environmental Issues chapter, as follows:

â€¢ Policy ENV1: The Council fails to identify how it will "maintain, restore and enhance" the sites of nature conservation importance that are identified, or how the performance of this policy will be monitored;

â€¢ Policy ENV3: In the context of the advice at paragraph 4.32 of PPS12 regarding the reformulation of national policies, Colonnade does not consider that this policy is required; and

â€¢ Policy ENV9: As set out in the representations to the Preferred Options Core Strategy, Colonnade does not consider that the necessary evidence base has been provided to justify a policy that seeks to go above and beyond the policy targets for the Code for Sustainable Homes as set out by Central Government.

g) Community Infrastructure, Leisure and Tourism

Policy CLT1 refers to the requirement for residential and employment development to contribute to the infrastructure identified in Appendix CLT1 through Standard Charges.

However, whilst the general principle of securing planning obligations through the application of standard charges is broadly accepted, the list of infrastructure requirements set out in Appendix CLT1 is not supported by sufficient evidence base to identify its robustness and credibility. As such, Colonnade does not consider either policy CLT1 or Appendix CLT1 is justified in the context of PPS12.

It is also noted that, despite the clarification sought by Colonnade at the Core Strategy Preferred Options stage, the CSS fails to confirm what information should be contained within Health Impact Assessments, which are required by policy CLT4. Once again, Colonnade requests further clarification of what is involved in the assessment and the expected outputs, which will provide greater clarity and will allow the policy to be monitored.

h) Transport

Policy T8 confirms that the Council will apply minimum parking standards. As set out in the representations to the Preferred Options Core Strategy, the guidance in Planning Policy Guidance Note 13: Transport (PPG13) is clear regarding the imposition of parking standards.

Paragraphs 52-56 of PPG13 confirm that the Local Planning Authorities should apply maximum not minimum parking standards. In order to satisfy the legal requirements set out in PPS12, the policy must reflect PPG13 to promote sustainable transport choices and further provide incentives for developers to locate further residential land closer to local service centres by requiring maximum parking standards for residential developments.

i) Economic Development

As set out in the representations to the Preferred Options Core Strategy, the land at Three Ashes Farm provides an excellent opportunity to deliver employment growth in the short term and may be a suitable site for the 'Eco-Innovation Centre' that is being promoted by the Council. Its identification as a suitable location for strategic employment growth, or the provision of an Eco-Innovation Centre, would accord with the general principles of the policies contained within Chapter 11.

Core Strategy Submission Document

O - 16254 - 9177 - Policy ENV1 - Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites - i

16254 Object

CHAPTER 8 Policy ENV1 - Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites

The identification of Purdeys Industrial Estate as fit for purpose (in paragraph 11.32 and the Council's 2008 Employment Land Study 2008) and therefore it should be maintained and if possible expanded, is welcomed and Colonnade considers that Three Ashes Farm could deliver this expansion, providing a natural extension to Purdeys Industrial Estate and being strategically located close to the Airport.

Three Ashes would address the negative impacts that the nearby residential area experiences from the existing Industrial Estate by providing a buffer between established uses and the residential area with less intensive employment activities. The highways analysis that has been carried out has suggested that it would not have an adverse impact on roads and congestion. Furthermore, there are very few opportunities for businesses to expand and Three Ashes could provide this opportunity.

j) Conclusions

Following the submission of representations to the Preferred Options Core Strategy, Colonnade is disappointed to note that the CSS fails to take account of the majority of the issues raised in their representations.

In addition, Colonnade considers the plan to be 'unsound' as the document consistently fails to meet the tests of soundness set out in the table following Paragraph 4.52 of PPS12 and respectfully requests that the Council notifies Icen, on behalf of Colonnade, of the future arrangements for the Examination of the Core Strategy. Furthermore, Colonnade wishes to take this opportunity to formally register a request to appear at all stages of the Examination in Public, including the pre-hearing meeting and any planned hearing sessions whereby issues raised in the context of this letter are to be discussed. Please confirm this request, and that the representations made to the Preferred Options Core Strategy will be taken into account alongside the current representations, by way of return to this letter.

Icen Projects, on behalf of Colonnade Land LLP trusts that the Council will find these representations to be constructive and helpful in taking forward the Core Strategy. Should you wish to discuss any aspect of these representations further, please do not hesitate to contact us.

Summary: Policy ENV1: The Council fails to identify how it will "maintain, restore and enhance" the sites of nature conservation importance that are identified, or how the performance of this policy will be monitored;

Full Text: ROCHFORD CORE STRATEGY SUBMISSION DOCUMENT, SEPTEMBER 2009
RESPONSE OF ESSEX COUNTY COUNCIL

1. General Comment

Essex County Council welcomes and broadly supports the Core Strategy prepared by Rochford District Council. The Strategy contains policies and proposals that address the spatial characteristics, issues and opportunities facing the District whilst respecting the distinctive qualities of the different settlements and parts of the District.

The County Council fully supports the maintenance of a strong policy approach to protection of the Green Belt and of the quality of environmental assets in the District whilst making adequate housing and employment provision within the District. The Core Strategy presents an approach that emphasises a balance of opportunity through the District and recognition of emerging economic prospects in the District and neighbouring areas. The intended preparation of more detailed Action Area Plans for London Southend Airport and its environs and for each of the three town centres of Rayleigh, Rochford and Hockley will further enhance the approach of the Core Strategy. The emphasis on the three town centres is particularly welcomed as offering a stimulus to improvement in the services and facilities available locally within the District whilst also affording possibilities of increased community focus.

2. Housing Distribution and Locations

The East of England Plan requires Rochford to provide a minimum of 3,790 additional dwellings between 2006 and 2021. In addition, provision for a further 1,000 dwellings should be made between 2021 and 2025 to ensure delivery of housing for at least 15 years from adoption of the Core Strategy (expected in 2010). Of this total requirement the District Council has identified a capacity of 2,000 dwellings through a Strategic Housing Land Availability Assessment. This means that the Core Strategy has to identify locations for about 1,750 dwellings to be delivered before 2021 and a further 1,000 dwellings between 2021 and 2025.

Policy H1 (The efficient use of land for housing) is supported. However, prioritisation of the reuse of previously developed land within settlements for additional housing is unlikely to provide a sufficient source of provision due to the generally residential nature of existing settlements in the district and the absence of potentially large sites of previously developed land. The assessment of potential for additional housing provision within settlements already includes the proposed re-allocation to substantially residential use of 4 existing employment areas.

Within Policy H2 (Extensions to residential envelopes and phasing) and Policy H3 (Extension to residential envelopes post-2021) the District Council has adopted a balanced approach to the distribution of additional housing locations, which is based on identification of tiers of settlements defined by reference to their accessibility to jobs, services and facilities (some of which lie outside the District) and the need to protect the valued environments within the District. This approach is generally supported, although implementation and delivery of individual schemes should give further thought to securing sustainable functional relationships between proposed development locations and availability of jobs, services and facilities.

The proposed scale and phasing of development at each of the identified locations in Policy H2 and Policy H3 should be capable of being supported by County Council service groups, provided that adequate and timely funding is available. The County Council would wish to work with the District Council to ensure that future infrastructure and facilities would serve and give benefit to the existing adjoining community as well as to the new development. In this respect it is noted that the Core Strategy proposes preparation by the District Council of a Planning Obligations and Standard Charges document (Policy CLT1). The District Council's document should fully reflect the County Council's own approach to this matter as set out in the County Council's 'Developer's Guide to Infrastructure Contributions'.

3. Economic Development

The approach to Employment Growth (Policy ED1) is supported. Given the economic structure of Rochford District the support to be given to protection and enhancement of the role of small and medium sized businesses; enhancement of the District's commercial centres; and development of a skills training academy is particularly welcome. These measures will assist in building on the existing economic resource of the District.

Proposals for the comprehensive development of London Southend Airport and its environs (Policy ED2) are supported.

Core Strategy Submission Document

O - 16697 - 9072 - Policy ENV1 - Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites - i

16697 Object

CHAPTER 8 Policy ENV1 - Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites

The further elaboration of proposals through an Area Action Plan will provide a firm foundation to realise the economic regeneration and growth opportunities presented by effective use of the Airport. The recognition of the potential environmental impact of the Airport and the commitment to work to mitigate any adverse impacts on the environment and local amenities is fully supported.

The location of the proposed Eco-Enterprise Centre to the North of London Southend Airport (Policy ED4) is supported. Creation of the Centre would assist reduction of the rate of business start-up failure in the district. Further the proposed location for the Centre would afford a clear offer to businesses within an area of varied business activity.

The continued protection and enhancement of existing employment land (Policy ED3) is supported, as is the identification of 4 existing employment sites for appropriate alternative, substantially residential, uses. Each of the 4 sites affords particular issues and opportunities whereby their redevelopment for other uses and relocation of existing occupiers would confer advantage for the immediately neighbouring areas and for the District as a whole.

4. Town Centres

The town centres of Rayleigh, Rochford and Hockley, and future plans for them, are closely linked to the economic development of the District but also present the opportunity to offer greater community focus within the District. The varied approach being taken to each of these town centres is supported (Policy RTC4, RTC5 and RTC6), notably the recognition of the role and purpose of the town centres beyond retail uses.

The contribution that the County Library service could make to plans for the town centres should not be overlooked. The 5 libraries in the District are substantial footfall draws in their localities and act as a 'community anchor store'. This has knock-on effects in encouraging use of neighbouring retail and service facilities. Further the Library service is currently looking at co-location opportunities for other services within the libraries which would enable them to act as a community focus.

5. Transport

The transport aspects of the Core Strategy are well balanced in identifying potential measures that would meet the needs of existing residents and businesses in the District as well as needs arising from future development. The approach reflects and makes good reference to the transportation aspirations of the County Council. The policy emphasis on close working between the District Council and the County Council to advance the transport aspirations is welcomed and fully supported.

In relation to parking standards (Policy T8 and Paragraph 10.30) the review undertaken by Essex County Council in conjunction with the Essex Planning Officers Association has now been completed. Revised parking standards have been agreed and signed off as County Supplementary Guidance, in accordance with PPS12, and is being applied by the County Council as Local Highways Authority.

6. Coastal Protection Belt

Policy ENV2 (Coastal Protection Belt) is not supported because in its current form it is not a suitable or effective replacement policy for Policy CC1 of the Replacement Structure Plan. Structure Plan Policy CC1 (The Undeveloped Coast - Coastal Protection Belt) currently remains a 'saved' policy of the Essex and Southend-on-Sea Replacement Structure Plan, April 2001 (following a direction of the Secretary of State, dated 27th September 2007, under paragraph 1(3) of Schedule 8 to the Planning and Compulsory Purchase Act 2004). The existing Policy CC1 reads, 'Within the Coastal Protection Belt defined in adopted local plans there shall be the most stringent restrictions on development within the rural and undeveloped coastline situated outside existing built-up areas, and any development which is exceptionally permitted within this Belt shall not adversely affect the open and rural character, historic features or wildlife.'

Core Strategy Policy ENV2 should be revised to include specific reference to,

- * Definition of the boundary of the Coastal Protection Belt in another Development Plan Document;
- * the application of the most stringent restrictions on development within the rural and undeveloped coastline;
- * any development exceptionally permitted not adversely affecting the open and rural character, historic features or wildlife.

7. Historic Environment

The importance of the historic environment in Rochford District is clearly identified within the Core Strategy document. Nevertheless, the policy guidance could be usefully enhanced to promote consideration and enhancement of the historic environment and use of the historic environment to shape place. This would be achieved by the following amendments to the Core Strategy,

- * Policy ENV1 (Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites) should be amended by deletion of the final sentence and its replacement with, The Council is committed to the protection, promotion and enhancement of the diverse historic landscape and extensive surviving archaeological deposits of the District.

Core Strategy Submission Document

O - 16697 - 9072 - Policy ENV1 - Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites - i

16697 Object

CHAPTER 8 Policy ENV1 - Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites

* Paragraph 8.15 of the supporting text should be amended to better support the suggested amendment to Policy ENV1. The existing text of Paragraph 8.15 should be deleted in its entirety and replaced by,
The historic environment of Rochford District has developed through a history of human activity that spans over 450,000 years. Much of the resource lies hidden beneath the ground in the form of archaeological deposits. Other elements such as the historic landscape, the pattern of field, farms, woods and grazing marsh which characterise the District, are a highly visible record of millennia of agriculture, industry and commerce. Of particular significance are the coastal, island and estuarine areas where multi-period landscapes reflecting the exploitation of coastal and marshland resource survive. The District also includes the important historic medieval market towns of Rochford and Rayleigh.

* Page 16 (Sustainable Community Strategy Priority: Promoting a Greener District) should be amended to further support the approach to the Historic Environment. The fourth bullet of the Key Section/Policies of the Core Strategy should be amended to include the word 'historic', so that the first sentence of the bullet would read,
The Environment chapter seeks to protect and enhance the biodiversity, historic and natural environment of the District by protecting sites of local, national and international importance.

8. Community Infrastructure

The approach to Community Infrastructure is supported. The County Council would wish to work with the District Council to ensure that future community infrastructure and facilities would serve and give benefit to the existing adjoining community as well as to the new development. In this respect it is noted that the Core Strategy proposes preparation by the District Council of a Planning Obligations and Standard Charges document (Policy CLT1). The District Council's document should fully reflect the County Council's own approach to this matter as set out in the County Council's 'Developer's Guide to Infrastructure Contributions'.

In addition, it should be noted that,

* Some County Council services are not highly visible despite being regarded as highly desirable community services by local residents. The need to ensure adequate funding and contributions to enable these services to meet community expectations should be recognised and acknowledged in consideration of planning obligations and standard charges.

* The Adult Community Learning Centre at Rocheway, Rochford could be better located with regard to the wider Rochford/Castle Point area of service. Relocation of the Centre could provide opportunities both at the new location and for the current site.

* The Core Strategy should make specific reference to,

o Appendix H1, Location at South Canewdon: new Early Years and Childcare facilities;

o Policy CLT2, final sentence: insert after the words 'primary schools' the words 'and Early Years and Childcare facilities';

o Appendix CLT1, Other issues/comment: for Early years and childcare facilities add 'Land to be allocated within new residential areas, as appropriate'.

9. Implementation, Delivery and Monitoring

The inclusion in the Core Strategy of a section considering Implementation, Delivery and Monitoring is welcomed and supported. Nevertheless, the District Council, in moving towards implementation and delivery of the individual elements of the Core Strategy, should highlight those schemes and projects that are critical to achievement of other aspects of the Strategy.

Further, the monitoring proposal for Policy H6 (Lifetime Homes) and for Policy CP1 (Design) should be amended,

* Policy H6 (Lifetime Homes) - the identified monitoring tool is Core Indicator H6 Housing Quality Building for Life Assessments. The Building for Life Assessment methodology was devised to measure the overall design/layout quality of housing developments. It was not devised to measure compliance with Lifetime Homes, which is largely, but not exclusively, concerned with internal space standards and the provision of internal arrangements within dwellings to meet needs of all residents.

* Policy CP1 (Design) - the monitoring indicator proposed by the Core Strategy is not supported because it is unclear what the indicator would actually be measuring. The proposed indicator should be replaced by the Core Indicator, Housing Quality - Building for Life Assessments, as suggested by the County Council in its response to the Core Strategy Preferred Options, October 2008. A better approach would be to base evaluation and monitoring of Policy CP1 on the Commission for Architecture and the Built Environment's (CABE) 20 Building for Life principles, particularly as Government has endorsed these principles and is urging local authorities to use them to assess design quality. It is suggested that the monitoring arrangements for Preferred Option CP1 be deleted and replaced by the following text, 'The success of the implementation of this policy will be monitored by assessing schemes, or an appropriate sample of schemes, against the Commission for Architecture and the Built Environment's (CABE) Building for Life principles.'

10. Access to Housing

The Core Strategy notes the higher prevalence of older people in Rochford District and the need to support them. However, a more broadly based approach to access to housing should be adopted by Policies H4, H5 and H6. It should recognise the presence of other vulnerable adults in the community, for example, those with learning or mental health disability, and the range of possible forms of accommodation, including supported, sheltered and extra care accommodation. The high level of owner occupation in the District further emphasises the need for a broader approach. The emphasis on Lifetime Homes would not address the variety of future needs, whilst the potential exemptions to the

Core Strategy Submission Document

16697 Object

CHAPTER 8 Policy ENV1 - Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites

Summary: Lifetime Homes policy standard in Policy H6 are likely to act against demographic trends. The importance of the historic environment in Rochford District is clearly identified within the Core Strategy document. Nevertheless, the policy guidance could be usefully enhanced to promote consideration and enhancement of the historic environment and use of the historic environment to shape place. This would be achieved by the following amendments to the Core Strategy,

Change to Plan Policy ENV1 (Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites) should be amended by deletion of the final sentence and its replacement with, The Council is committed to the protection, promotion and enhancement of the diverse historic landscape and extensive surviving archaeological deposits of the District.

Full Text: ROCHFORD LOCAL DEVELOPMENT FRAMEWORK
CORE STRATEGY SUBMISSION DOCUMENT

Thank you for your letter dated 21 September 2009 consulting English Heritage on the above document. Our comments are set out below.

CHAPTER 4 HOUSING

Vision and objectives

While we note that character of place is addressed in chapter 5, it is important that this consideration is recognised as relevant within the Housing chapter. Paras 2.33, 2.69 and 2.73 also recognise the importance of character and sense of place in the built environment. We recommend that this consideration should be integrated into the vision and objectives for housing in order to improve the clarity of the plan, and its consistency with advice in PPS1.

Recommendation:

The following amendments are suggested:

- Vision in five years: add 'settlement character' after 'infrastructure'
- Vision by 2025: add 'and places' after 'communities' in bullet 1
- Objectives: In objective 2 amend to '...sustainable locations, enhancing sense of place and having regard to..'
- Para 4.19: Amend bullet 5 to read 'The historical, agricultural and ecological value of land, and settlement character'

CHAPTER 5 CHARACTER OF PLACE

We strongly support this section and policies CP1, CP2 and CP3. In the absence of policy coverage for listed buildings and scheduled monuments we recommend that para 5.9 should refer to PPGs 15 and 16, as well as draft PPS15.

CHAPTER 8 ENVIRONMENTAL ISSUES

We welcome the references the historic environment in the objectives and in policies ENV1 and ENV2.

Policy ENV6 Large Scale Renewable Energy Projects

We consider that this policy should refer to the historic interest of sites to reflect the advice in PPS22 more appropriately.

Recommendation: amend the first bullet in policy ENV6 to read '...it's ecological, historic or landscape value...'

CHAPTER 11 ECONOMIC DEVELOPMENT

Policy ED2 London Southend Airport

We understand that the grade I listed church in the vicinity of the runway will be protected in any proposals for expansion of the airport and the Core Strategy policy does not suggest otherwise. We will respond to the detail of proposals for the airport through responses to consultations on the Joint Area Action Plan and any planning applications.

In the interests of clarity, the above comments where we suggest changes to the Core Strategy should be recorded as objections to the soundness of the plan in terms of consistency with national guidance. However, we hope that it will be possible to agree amendments on these points prior to the public examination.

We would be happy to discuss any of these comments if you would find this useful.

Summary: CHAPTER 8 ENVIRONMENTAL ISSUES

We welcome the references the historic environment in the objectives and in policies ENV1 and ENV2.

Full Text: ROCHFORD CORE STRATEGY SUBMISSION DOCUMENT, SEPTEMBER 2009
RESPONSE OF ESSEX COUNTY COUNCIL

1. General Comment

Essex County Council welcomes and broadly supports the Core Strategy prepared by Rochford District Council. The Strategy contains policies and proposals that address the spatial characteristics, issues and opportunities facing the District whilst respecting the distinctive qualities of the different settlements and parts of the District.

The County Council fully supports the maintenance of a strong policy approach to protection of the Green Belt and of the quality of environmental assets in the District whilst making adequate housing and employment provision within the District. The Core Strategy presents an approach that emphasises a balance of opportunity through the District and recognition of emerging economic prospects in the District and neighbouring areas. The intended preparation of more detailed Action Area Plans for London Southend Airport and its environs and for each of the three town centres of Rayleigh, Rochford and Hockley will further enhance the approach of the Core Strategy. The emphasis on the three town centres is particularly welcomed as offering a stimulus to improvement in the services and facilities available locally within the District whilst also affording possibilities of increased community focus.

2. Housing Distribution and Locations

The East of England Plan requires Rochford to provide a minimum of 3,790 additional dwellings between 2006 and 2021. In addition, provision for a further 1,000 dwellings should be made between 2021 and 2025 to ensure delivery of housing for at least 15 years from adoption of the Core Strategy (expected in 2010). Of this total requirement the District Council has identified a capacity of 2,000 dwellings through a Strategic Housing Land Availability Assessment. This means that the Core Strategy has to identify locations for about 1,750 dwellings to be delivered before 2021 and a further 1,000 dwellings between 2021 and 2025.

Policy H1 (The efficient use of land for housing) is supported. However, prioritisation of the reuse of previously developed land within settlements for additional housing is unlikely to provide a sufficient source of provision due to the generally residential nature of existing settlements in the district and the absence of potentially large sites of previously developed land. The assessment of potential for additional housing provision within settlements already includes the proposed re-allocation to substantially residential use of 4 existing employment areas.

Within Policy H2 (Extensions to residential envelopes and phasing) and Policy H3 (Extension to residential envelopes post-2021) the District Council has adopted a balanced approach to the distribution of additional housing locations, which is based on identification of tiers of settlements defined by reference to their accessibility to jobs, services and facilities (some of which lie outside the District) and the need to protect the valued environments within the District. This approach is generally supported, although implementation and delivery of individual schemes should give further thought to securing sustainable functional relationships between proposed development locations and availability of jobs, services and facilities.

The proposed scale and phasing of development at each of the identified locations in Policy H2 and Policy H3 should be capable of being supported by County Council service groups, provided that adequate and timely funding is available. The County Council would wish to work with the District Council to ensure that future infrastructure and facilities would serve and give benefit to the existing adjoining community as well as to the new development. In this respect it is noted that the Core Strategy proposes preparation by the District Council of a Planning Obligations and Standard Charges document (Policy CLT1). The District Council's document should fully reflect the County Council's own approach to this matter as set out in the County Council's 'Developer's Guide to Infrastructure Contributions'.

3. Economic Development

The approach to Employment Growth (Policy ED1) is supported. Given the economic structure of Rochford District the support to be given to protection and enhancement of the role of small and medium sized businesses; enhancement of the District's commercial centres; and development of a skills training academy is particularly welcome. These measures will assist in building on the existing economic resource of the District.

Proposals for the comprehensive development of London Southend Airport and its environs (Policy ED2) are supported.

Core Strategy Submission Document

16696 Object

CHAPTER 8 Policy ENV2 - Coastal Protection Belt

The further elaboration of proposals through an Area Action Plan will provide a firm foundation to realise the economic regeneration and growth opportunities presented by effective use of the Airport. The recognition of the potential environmental impact of the Airport and the commitment to work to mitigate any adverse impacts on the environment and local amenities is fully supported.

The location of the proposed Eco-Enterprise Centre to the North of London Southend Airport (Policy ED4) is supported. Creation of the Centre would assist reduction of the rate of business start-up failure in the district. Further the proposed location for the Centre would afford a clear offer to businesses within an area of varied business activity.

The continued protection and enhancement of existing employment land (Policy ED3) is supported, as is the identification of 4 existing employment sites for appropriate alternative, substantially residential, uses. Each of the 4 sites affords particular issues and opportunities whereby their redevelopment for other uses and relocation of existing occupiers would confer advantage for the immediately neighbouring areas and for the District as a whole.

4. Town Centres

The town centres of Rayleigh, Rochford and Hockley, and future plans for them, are closely linked to the economic development of the District but also present the opportunity to offer greater community focus within the District. The varied approach being taken to each of these town centres is supported (Policy RTC4, RTC5 and RTC6), notably the recognition of the role and purpose of the town centres beyond retail uses.

The contribution that the County Library service could make to plans for the town centres should not be overlooked. The 5 libraries in the District are substantial footfall draws in their localities and act as a 'community anchor store'. This has knock-on effects in encouraging use of neighbouring retail and service facilities. Further the Library service is currently looking at co-location opportunities for other services within the libraries which would enable them to act as a community focus.

5. Transport

The transport aspects of the Core Strategy are well balanced in identifying potential measures that would meet the needs of existing residents and businesses in the District as well as needs arising from future development. The approach reflects and makes good reference to the transportation aspirations of the County Council. The policy emphasis on close working between the District Council and the County Council to advance the transport aspirations is welcomed and fully supported.

In relation to parking standards (Policy T8 and Paragraph 10.30) the review undertaken by Essex County Council in conjunction with the Essex Planning Officers Association has now been completed. Revised parking standards have been agreed and signed off as County Supplementary Guidance, in accordance with PPS12, and is being applied by the County Council as Local Highways Authority.

6. Coastal Protection Belt

Policy ENV2 (Coastal Protection Belt) is not supported because in its current form it is not a suitable or effective replacement policy for Policy CC1 of the Replacement Structure Plan. Structure Plan Policy CC1 (The Undeveloped Coast - Coastal Protection Belt) currently remains a 'saved' policy of the Essex and Southend-on-Sea Replacement Structure Plan, April 2001 (following a direction of the Secretary of State, dated 27th September 2007, under paragraph 1(3) of Schedule 8 to the Planning and Compulsory Purchase Act 2004). The existing Policy CC1 reads, 'Within the Coastal Protection Belt defined in adopted local plans there shall be the most stringent restrictions on development within the rural and undeveloped coastline situated outside existing built-up areas, and any development which is exceptionally permitted within this Belt shall not adversely affect the open and rural character, historic features or wildlife.'

Core Strategy Policy ENV2 should be revised to include specific reference to,

- * Definition of the boundary of the Coastal Protection Belt in another Development Plan Document;
- * the application of the most stringent restrictions on development within the rural and undeveloped coastline;
- * any development exceptionally permitted not adversely affecting the open and rural character, historic features or wildlife.

7. Historic Environment

The importance of the historic environment in Rochford District is clearly identified within the Core Strategy document. Nevertheless, the policy guidance could be usefully enhanced to promote consideration and enhancement of the historic environment and use of the historic environment to shape place. This would be achieved by the following amendments to the Core Strategy,

- * Policy ENV1 (Protection and Enhancement of the Natural Landscape and Habitats and the Protection of Historical and Archaeological Sites) should be amended by deletion of the final sentence and its replacement with, The Council is committed to the protection, promotion and enhancement of the diverse historic landscape and extensive surviving archaeological deposits of the District.

16696 Object

CHAPTER 8 Policy ENV2 - Coastal Protection Belt

* Paragraph 8.15 of the supporting text should be amended to better support the suggested amendment to Policy ENV1. The existing text of Paragraph 8.15 should be deleted in its entirety and replaced by,
The historic environment of Rochford District has developed through a history of human activity that spans over 450,000 years. Much of the resource lies hidden beneath the ground in the form of archaeological deposits. Other elements such as the historic landscape, the pattern of field, farms, woods and grazing marsh which characterise the District, are a highly visible record of millennia of agriculture, industry and commerce. Of particular significance are the coastal, island and estuarine areas where multi-period landscapes reflecting the exploitation of coastal and marshland resource survive. The District also includes the important historic medieval market towns of Rochford and Rayleigh.

* Page 16 (Sustainable Community Strategy Priority: Promoting a Greener District) should be amended to further support the approach to the Historic Environment. The fourth bullet of the Key Section/Policies of the Core Strategy should be amended to include the word 'historic', so that the first sentence of the bullet would read,
The Environment chapter seeks to protect and enhance the biodiversity, historic and natural environment of the District by protecting sites of local, national and international importance.

8. Community Infrastructure

The approach to Community Infrastructure is supported. The County Council would wish to work with the District Council to ensure that future community infrastructure and facilities would serve and give benefit to the existing adjoining community as well as to the new development. In this respect it is noted that the Core Strategy proposes preparation by the District Council of a Planning Obligations and Standard Charges document (Policy CLT1). The District Council's document should fully reflect the County Council's own approach to this matter as set out in the County Council's 'Developer's Guide to Infrastructure Contributions'.

In addition, it should be noted that,

* Some County Council services are not highly visible despite being regarded as highly desirable community services by local residents. The need to ensure adequate funding and contributions to enable these services to meet community expectations should be recognised and acknowledged in consideration of planning obligations and standard charges.

* The Adult Community Learning Centre at Rocheway, Rochford could be better located with regard to the wider Rochford/Castle Point area of service. Relocation of the Centre could provide opportunities both at the new location and for the current site.

* The Core Strategy should make specific reference to,

o Appendix H1, Location at South Canewdon: new Early Years and Childcare facilities;

o Policy CLT2, final sentence: insert after the words 'primary schools' the words 'and Early Years and Childcare facilities';

o Appendix CLT1, Other issues/comment: for Early years and childcare facilities add 'Land to be allocated within new residential areas, as appropriate'.

9. Implementation, Delivery and Monitoring

The inclusion in the Core Strategy of a section considering Implementation, Delivery and Monitoring is welcomed and supported. Nevertheless, the District Council, in moving towards implementation and delivery of the individual elements of the Core Strategy, should highlight those schemes and projects that are critical to achievement of other aspects of the Strategy.

Further, the monitoring proposal for Policy H6 (Lifetime Homes) and for Policy CP1 (Design) should be amended,

* Policy H6 (Lifetime Homes) - the identified monitoring tool is Core Indicator H6 Housing Quality Building for Life Assessments. The Building for Life Assessment methodology was devised to measure the overall design/layout quality of housing developments. It was not devised to measure compliance with Lifetime Homes, which is largely, but not exclusively, concerned with internal space standards and the provision of internal arrangements within dwellings to meet needs of all residents.

* Policy CP1 (Design) - the monitoring indicator proposed by the Core Strategy is not supported because it is unclear what the indicator would actually be measuring. The proposed indicator should be replaced by the Core Indicator, Housing Quality - Building for Life Assessments, as suggested by the County Council in its response to the Core Strategy Preferred Options, October 2008. A better approach would be to base evaluation and monitoring of Policy CP1 on the Commission for Architecture and the Built Environment's (CABE) 20 Building for Life principles, particularly as Government has endorsed these principles and is urging local authorities to use them to assess design quality. It is suggested that the monitoring arrangements for Preferred Option CP1 be deleted and replaced by the following text, 'The success of the implementation of this policy will be monitored by assessing schemes, or an appropriate sample of schemes, against the Commission for Architecture and the Built Environment's (CABE) Building for Life principles.'

10. Access to Housing

The Core Strategy notes the higher prevalence of older people in Rochford District and the need to support them. However, a more broadly based approach to access to housing should be adopted by Policies H4, H5 and H6. It should recognise the presence of other vulnerable adults in the community, for example, those with learning or mental health disability, and the range of possible forms of accommodation, including supported, sheltered and extra care accommodation. The high level of owner occupation in the District further emphasises the need for a broader approach. The emphasis on Lifetime Homes would not address the variety of future needs, whilst the potential exemptions to the

16696 Object

CHAPTER 8 Policy ENV2 - Coastal Protection Belt

Summary: Lifetime Homes policy standard in Policy H6 are likely to act against demographic trends.
Coastal Protection Belt

Policy ENV2 (Coastal Protection Belt) is not supported because in its current form it is not a suitable or effective replacement policy for Policy CC1 of the Replacement Structure Plan. Structure Plan Policy CC1 (The Undeveloped Coast - Coastal Protection Belt) currently remains a 'saved' policy of the Essex and Southend-on-Sea Replacement Structure Plan, April 2001 (following a direction of the Secretary of State, dated 27th September 2007, under paragraph 1(3) of Schedule 8 to the Planning and Compulsory Purchase Act 2004). The existing Policy CC1 reads, 'Within the Coastal Protection Belt defined in adopted local plans there shall be the most stringent restrictions on development within the rural and undeveloped coastline situated outside existing built-up areas, and any development which is exceptionally permitted within this Belt shall not adversely affect the open and rural character, historic features or wildlife.'

Change to Plan Core Strategy Policy ENV2 should be revised to include specific reference to,
* Definition of the boundary of the Coastal Protection Belt in another Development Plan Document;
* the application of the most stringent restrictions on development within the rural and undeveloped coastline;
* any development exceptionally permitted not adversely affecting the open and rural character, historic features or wildlife.

CORE STRATEGY SUBMISSION DOCUMENT

Thank you for your letter dated 21 September 2009 consulting English Heritage on the above document. Our comments are set out below.

CHAPTER 4 HOUSING

Vision and objectives

While we note that character of place is addressed in chapter 5, it is important that this consideration is recognised as relevant within the Housing chapter. Paras 2.33, 2.69 and 2.73 also recognise the importance of character and sense of place in the built environment. We recommend that this consideration should be integrated into the vision and objectives for housing in order to improve the clarity of the plan, and its consistency with advice in PPS1.

Recommendation:

The following amendments are suggested:

- Vision in five years: add 'settlement character' after 'infrastructure'
- Vision by 2025: add 'and places' after 'communities' in bullet 1
- Objectives: In objective 2 amend to '...sustainable locations, enhancing sense of place and having regard to..'
- Para 4.19: Amend bullet 5 to read 'The historical, agricultural and ecological value of land, and settlement character'

CHAPTER 5 CHARACTER OF PLACE

We strongly support this section and policies CP1, CP2 and CP3. In the absence of policy coverage for listed buildings and scheduled monuments we recommend that para 5.9 should refer to PPGs 15 and 16, as well as draft PPS15.

CHAPTER 8 ENVIRONMENTAL ISSUES

We welcome the references the historic environment in the objectives and in policies ENV1 and ENV2.

Policy ENV6 Large Scale Renewable Energy Projects

We consider that this policy should refer to the historic interest of sites to reflect the advice in PPS22 more appropriately.

Recommendation: amend the first bullet in policy ENV6 to read '...it's ecological, historic or landscape value...'

CHAPTER 11 ECONOMIC DEVELOPMENT

Policy ED2 London Southend Airport

We understand that the grade I listed church in the vicinity of the runway will be protected in any proposals for expansion of the airport and the Core Strategy policy does not suggest otherwise. We will respond to the detail of proposals for the airport through responses to consultations on the Joint Area Action Plan and any planning applications.

In the interests of clarity, the above comments where we suggest changes to the Core Strategy should be recorded as objections to the soundness of the plan in terms of consistency with national guidance. However, we hope that it will be possible to agree amendments on these points prior to the public examination.

We would be happy to discuss any of these comments if you would find this useful.

Summary: CHAPTER 8 ENVIRONMENTAL ISSUES

We welcome the references the historic environment in the objectives and in policies ENV1 and ENV2.

Support the application of the sequential test, which seeks to direct development to areas at least risk of flooding. The application of PPS25 exceptions test will only be applied when the sequential test has shown that there are no available locations for necessary development other than within areas of at risk of flooding.

However, do not support the statement that the majority of development necessary within the District can be accommodated within Flood Zone 1 (areas least at risk of flooding), although there may be exceptions involving previously developed land.

PPS25 does not caveat that the exceptions test can be overridden by previously developed land; flood risk needs to be considered along with other planning issues. Taking into consideration the aim to manage risk, the use of a previous developed site in an area subject to flood risk would put property and people at greater risk; particularly, when it would replace a less vulnerable use (employment), with a more vulnerable use (residential).

Amend text of third sentence of fourth paragraph of 'Appraising Risk':

'... As such, it is envisaged that the majority of new development necessary within the District can be accommodated within Flood Zone 1 (areas of least risk of flooding).'

Summary:

CHAPTER 8 Flood Risk, 8.22

Respondent: Environment Agency (Miss Carrie Williams) [9889] **Agent:** N/A

Environment Agency
Iceni House
Cobham Road
Ipswich
Suffolk
IP3 9JD
United Kingdom
01473 706007

Full Text: This paragraph makes mention of the Thames Gateway South Essex Strategic Flood Risk Assessment (SFRA) under the subheading "(1) Appraising risk". Please note that this SFRA was completed in 2006 prior to the publication of Planning Policy Statement 25. This SFRA therefore does not include up-to-date climate change scenarios that were introduced in PPS25. The newer climate change allowances can significantly increase the risk of flooding in areas and can present very different results from those published in the TGSE SFRA (2006). In addition, this SFRA did not cover the entire Rochford District.

In light of the above, this document cannot be relied upon for applying the Sequential test in accordance with PPS25 because the information contained within it is incomplete. The Environment Agency have made clear that an updated SFRA is required if development is being proposed within areas at risk of flooding. We have been involved in working with the council and some of the other South Essex Local Authorities in producing an updated SFRA however this has only reached scoping stage and we have had no guarantees that the project will be completed.

The Core Strategy cannot therefore be considered to be justified because it is not supported by a complete, accurate and up-to-date evidence base in the absence of a PPS25 compliant SFRA. In not being compliant with PPS25, this Core Strategy cannot be considered to be consistent with national flood risk policy as set out in PPS25.

In addition to the above, we do not believe that the Core Strategy is supported by sufficient evidence to justify the statement that there may be some exceptions to the provision of new development in Flood Zone 1 where previously developed land is available in higher risk flood zones. The general approach of giving priority to brownfield land is in line with PPS3, however the policy also recognises the need to take into account environmental constraints and risks, including flood risk, in setting out strategies for the planned location of new housing in order to achieve sustainable development objectives set out in Planning Policy Statement 1 and that some sites might not therefore be suitable for housing (see paragraphs 38 and 41). This ties in with the process of applying the PPS25 Sequential Test and Exception Test which places flood risk classification and the vulnerability of proposed developments as the primary concern, with the designation of land as brownfield as a secondary consideration when applying part b of the Exception Test. Given that the national target of 60% redevelopment of previously developed land (as required by PPS3) is deemed unrealistic in Rochford District (paragraph 4.15 of this Core Strategy) and that Policy H2 indicates that there will therefore be a need to release greenbelt land in order to accommodate required growth in nonconformity with Planning Policy Guidance note 2, there is no justification to support the assumption that developing the brownfield land in the high risk flood zone is the most appropriate course of action given the reasonable alternative of accommodating those housing figures in areas at lesser flood risk - either by releasing a minimal additional amount of greenbelt, or by slightly increasing density of development elsewhere.

The Core Strategy should acknowledge the inadequacy of the current Strategic Flood Risk Assessment and state their intention to update this vital study in order to comply with national policy and ensure that this DPD can be adequately justified.

The Council should also seek to provide clear and transparent justification of the LPAs decisions by carrying out a Sequential Test to support this Core Strategy document. At this stage in the development of the LDF, in the absence of an up-to-date SFRA, this would have to be based upon the Environment Agency's flood maps (future iterations for more detailed DPDS would require an up-to-date SFRA). Applying the PPS25 Sequential test will allow for all of the available alternatives to be properly assessed, including justification for the Council's decision to prioritise brownfield development in areas of flood risk when some greenbelt land in areas of lesser flood risk is already being released, or development densities could be increased in other areas.

Please note that should the Inspector deem it necessary for us to attend the Examination in Public, we would be happy to do so but our preferred method at this time would be written representations.

Full Text: ROCHFORD DISTRICT COUNCIL - LOCAL DEVELOPMENT FRAMEWORK CORE STRATEGY SUBMISSION
SEPTEMBER 2009

Icen Projects Ltd (Icen) has been instructed by Colonnade Land LLP (Colonnade) to submit representations to the Rochford Local Development Framework Core Strategy Submission (CSS).

a) Overview

It is our conclusion that the CSS is not justified, effective or consistent with national policy, as required by Planning Policy Statement 12: Creating Strong Safe and Prosperous Communities through Local Spatial Planning (PPS12) and is therefore vulnerable to being found unsound by an Inspector through the Examination in Public.

b) Background and Summary

These representations follow those made by Icen on behalf of Colonnade to the Preferred Options Core Strategy, submitted via letter dated 17 December 2008. In this regard, we would request that the Council confirms that the representations made to the Preferred Options Core Strategy will be taken into account alongside the current representations, particularly as there are a number of cross references between the two sets of representations.

It is not considered necessary to reiterate the content of the previous representations, as they were made at the appropriate stage and will be considered by the Planning Inspectorate in due course, but it is inevitable that certain elements will require restating where it is not clear that they have been taken into account in the production of the CSS. For clarity, therefore, Colonnade feel that it is appropriate to clarify the 'in-principle' issues that were raised in the representations to the Preferred Options Core Strategy, recognising that these issues were raised in the context of a wider and more coherent justification made within the representations:

- â€¢ Further cross-referencing of the recommendations made within the evidence base is required;
- â€¢ Greater focus should be placed on promoting Rochford as the principal settlement within the District;
- â€¢ Coombes Farm is the most logical location for residential development abutting the urban area of Rochford and as such warrants recognition as a general location for residential development;
- â€¢ The allocation of Three Ashes Farm for employment generating uses will be pursued;
- â€¢ Recognition that it is not realistic to expect residential allocations to be met mainly on Brownfield sites, nor should the intensification of smaller sites in residential areas be pursued;
- â€¢ Many of the sites identified as suitable for residential development will not be viable and will not come forward for development within the timescales anticipated;
- â€¢ The failure to provide the necessary justification for the proposed infrastructure improvements sought in Appendix H1;
- â€¢ The inclusion of an affordable housing exception policy was sought; and
- â€¢ The need to identify sites capable of delivering employment growth in the short term.

Following assessment of the CSS presented by the Council for consultation prior to submission to the Secretary of State, Colonnade considers the Plan to be 'unsound' as the document consistently fails to meet the tests of soundness set out in the table following Paragraph 4.52 of PPS12. For clarity, PPS12 confirms that to be 'sound' a Core Strategy should be JUSTIFIED, EFFECTIVE and consistent with NATIONAL POLICY and defines 'justified' as "founded on a robust and credible evidence base" and "the most appropriate strategy when considered against the reasonable alternatives" and 'effective' as "deliverable", "flexible" and "able to be monitored".

The rationale for the above is identified in the remainder of these representations, which are provided in the interests of ensuring the Council delivers a strong, robust and logical Core Strategy that guides the future development of the District in a justified and effective manner.

b) Colonnade

As the Council is aware from previous submissions to the Local Development Framework, Colonnade is a strategic land company with a particular interest in the future development of the District as a consequence of a number of sites that it controls, particularly around Rochford.

The Council will also be aware that Colonnade has recently submitted an outline planning application for the residential development of the land at Coombes Farm, Rochford to provide a sustainable urban extension comprising up to 326

16255 Object

CHAPTER 8 Policy ENV3 - Flood Risk

residential dwellings, with associated accesses and community uses. Whilst the planning application process is clearly separate from the Local Development Framework production process, Colonnade wishes to continue the promotion of the site as a suitable location for residential development.

Accordingly, these representations focus on the legal requirements and tests of soundness associated principally with the Housing and Employment chapters of the CSS, with reference where appropriate to the sites that are controlled by Colonnade, the outline planning application at Coombes Farm and other issues where relevant.

c) Housing

i. Date of Adoption

The CSS assumes an adoption date of 2010 and plans for the provision of housing to 2025.

Taking account of the potential delays to the adoption of the Plan, including the Examination process, it would be more appropriate for the CSS to provide sufficient flexibility to allow for delays in its adoption. Colonnade considers an adoption date of 2011 for the CSS is a more realistic target.

Taking account of the advice in Paragraph 4.13 of PPS12, which states that the time horizon for the Core Strategy should be "at least 15 years from the date of adoption" it would be appropriate for the CSS to plan for the provision of housing to 2026 at the earliest. As such, Colonnade does not consider the CSS to be 'flexible' in the context of the tests of soundness in the table following Paragraph 4.52 of PPS12.

ii. Housing Delivery

However, setting the above aside, the Housing Chapter identifies the minimum housing delivery target for the period 2001 to 2021 of 4,600 dwellings as set out in the East of England Plan, with the annual average requirement of 250 dwellings per annum to extend provision from 2021 to 2025. It also confirms that the residual target for the period 2006 to 2021 is 3,790 dwellings, taking account of the delivery of 810 dwellings in the period 2001 to 2006, and a further 618 dwellings have been completed between 2006 and 2008.

This leaves a residual housing provision target of a minimum of 3,172 dwellings in the period 2008 to 2021. Taking into account the required provision beyond 2021, the residual housing provision target in the period 2008 to 2025 is a minimum of 4,172 dwellings. The disparity between these figures and those provided within the CSS are explained by the rounding down of the annual average delivery requirement in the period 2006 to 2021 to 250 dwellings per annum, compared with the actual figure of 252.67.

The table at Paragraph 4.6 of the CSS identifies the source of housing provision that will meet the identified minimum requirements and includes figures for 'Extant Planning Permissions' and 'Existing allocations/other appropriate sites identified in Strategic Housing Land Availability Assessment'. These figures, along with the actual completions within the period are combined to produce the figure for the 'Total without Green Belt release' figure.

Setting aside the concern regarding under-provision associated with the rounding down of the annual average delivery requirement in the period 2006 to 2021, the CSS fails to identify the sites that will contribute to the 'Extant Planning Permissions' provision. The identification of the sites that will contribute to the 'Extant Planning Permissions' should be provided in the context of the findings of the Inspector in the appeal by Asprey Homes [APP/G5180/A/07/2043219/NWF] who determined that the reliance on a delivery rate of 100% is unsafe [IR287].

Furthermore, at the time of writing these representations, the Strategic Housing Land Availability Assessment 2009 has not been published. It is impossible therefore for a full assessment of the proposed housing provision to be undertaken to confirm whether the CSS is 'founded on a robust and credible evidence base' [test of soundness in the table following Paragraph 4.52 of PPS12].

iii. Redevelopment of Employment Sites

Paragraph 4.14 of the CSS refers to the identification of the four employment sites that are considered by the Council to be suitable for redevelopment to residential use. However, the failure to publish the Strategic Housing Land Availability Assessment 2009 either before or alongside the publication of the CSS means that the assumptions made by the Council as to the suitability, availability, viability and deliverability of the sites cannot be assessed.

It has been necessary, therefore, to review the assumptions made in the Rochford Urban Capacity Study 2007 (UCS) regarding the sites. Within the section of the UCS entitled 'Redevelopment of Established Employment Land' [pages 22 & 23] includes a list of those sites assessed, their indicative capacities and the probability of residential development coming forward at the sites within the plan period (identified elsewhere as 2001 - 2021). The list includes the four sites identified in the CSS of Eldon Way/Foundry Estate, Hockley; Rawreth Lane Industrial Estate, Rayleigh; Stambridge Mills; and Star Lane Industrial Estate, Great Wakering.

In total, the UCS identifies an indicative residential redevelopment capacity of 486 units on the four sites (118, 220, 60 and 88 respectively). Of these, it identifies the Rawreth Lane Industrial Estate and Stambridge Mills as having a 'high'

16255 Object

CHAPTER 8 Policy ENV3 - Flood Risk

probability of coming forward for development in the Plan period (2001 - 2021), which would deliver 280 residential dwellings using the Council's own figures. The Star Lane Industrial Estate (referred to in the UCS as the Star Lane Brickworks) is identified as having a 'medium' probability of coming forward for development in the Plan period, with capacity to deliver 88 residential dwellings. It is unclear, therefore, where the figure for 'Existing allocations/other appropriate sites identified in Strategic Housing Land Availability Assessment'.

Set against this is the identification of these four sites in the CSS as being capable of delivery for residential development within the Plan period, with 671 units delivered between 2006 and 2015 and a further 506 units between 2015 and 2021.

The UCS also states in the same section that:

"There are considerable areas of land in the district that are currently allocated for, and in use as, employment land. The redevelopment of such sites for residential use would reduce demand for residential development on greenfield sites, but would at the same time create a need for alternative sites to be found for employment. Such an approach, which would be likely to require the decontamination of existing employment land to make it fit for residential use, together with development of a greenfield site and implementation of additional infrastructure to serve the new employment area, may well be unsustainable." [our emphasis]

The UCS appears to confirm therefore, that not only would the redevelopment of the four sites listed in the CSS be unlikely within the Plan period, but also potentially unsustainable. In this regard, it is notable that the promoters of Stambridge Mills sought the Screening Opinion of the Council as to whether Environmental Impact Assessment of the planning application for the redevelopment of the site for residential use was required in 2007, but to date are yet to submit a planning application for the redevelopment of the site.

In light of this, Colonnade does not consider the CSS is 'the most appropriate strategy when considered against the reasonable alternatives' [test of soundness in the table following Paragraph 4.52 of PPS12], which include the provision of residential development in East Rochford.

iv. Strategic Housing Growth to the East of Rochford

Furthermore, whilst paragraph 2.62 of the CSS identifies concern relating to the identification of locations to the east of Rochford for development on the basis that 'vehicular movements would inevitably be directed through Rochford's historic core', the CSS later identifies Stambridge Mills as a suitable site for residential redevelopment.

In light of the evident conflicts between the evidence base provided in support of the CSS and the absence of other evidence, the CSS is not considered 'sound' in the context of the tests of soundness in the table following Paragraph 4.52 of PPS12.

v. Housing Trajectory

Paragraph 4.28 of the CSS confirms that policies H1, H2 and H3 of the CSS will deliver housing supply as illustrated in the Housing Trajectory at Appendix H2. This Housing Trajectory is transposed from the 2008 Annual Monitoring Report (AMR).

Whilst on the face of it, the Housing Trajectory appears to confirm that the Council can meet its requirement to identify a five year housing supply, many of the sites identified within the AMR do not conform to the guidance issued by CLG in August 2008, on the assessment of a five year land supply. The guidance identifies sites that can be included within the five year assessment of housing supply as:

"those that are allocated for housing in the Development Plan, sites that have planning permission (outline or full planning permission that has not been implemented) and specific, unallocated brownfield sites that have the potential to make a significant contribution to housing delivery during the 5 year period".

Table 4.10: Projected Net Completions of the AMR confirms that the five year housing land supply figure includes sites from 'other land allocated for residential purposes', which are based on land allocations outside existing settlements. However, it should be clarified that these land allocations are not currently allocated for housing development in an adopted Development Plan. As such, these unallocated greenfield sites that are yet to make significant progress through the planning system should be discounted and the five year housing land supply recalculated.

The table below has been prepared to confirm the extent of the shortfall should the sites from 'other land allocated for residential purposes' be removed from the calculation of the Rochford five year housing land supply, in accordance with the guidance issued by CLG:

Recalculated Five Year Housing Land Supply (2009 - 2014):

Year
1st April 2009 to 31st March 2010
Predicted Delivery (A)

Core Strategy Submission Document

16255 Object

CHAPTER 8 Policy ENV3 - Flood Risk

106 dwellings
Allocations on 'other land allocated for residential purposes' (B)
0
Residual delivery (A-B)
106 dwellings
Delivery Shortfall
0

Year
1st April 2010 to 31st March 2011
Predicted Delivery (A)
217 dwellings
Allocations on 'other land allocated for residential purposes' (B)
150
Residual delivery (A-B)
67 dwellings
Delivery Shortfall
150

Year
1st April 2011 to 31st March 2012
Predicted Delivery (A)
544 dwellings
Allocations on 'other land allocated for residential purposes' (B)
300
Residual delivery (A-B)
244 dwellings
Delivery Shortfall
300

Year
1st April 2012 to 31st March 2013
Predicted Delivery (A)
395 dwellings
Allocations on 'other land allocated for residential purposes' (B)
375
Residual delivery (A-B)
20 dwellings
Delivery Shortfall
375

Year
1st April 2013 to 31st March 2014
Predicted Delivery (A)
300 dwellings
Allocations on 'other land allocated for residential purposes' (B)
300
Residual delivery (A-B)
0 dwellings
Delivery Shortfall
300

TOTAL

Predicted Delivery (A)
1,562 dwellings

Allocations on 'other land allocated for residential purposes' (B)
1,125 dwellings

Residual delivery (A-B)
437 dwellings

Delivery Shortfall
1,125 dwellings

The above table confirms that the removal of the 'other land allocated for residential purposes' from the calculation of the Rochford five year housing land supply leaves the Council with a minimum net additional housing delivery of 437 dwellings, which equates to a supply of 1.7 years based on the adjusted annual delivery target of a minimum of 255 net

16255 Object

CHAPTER 8 Policy ENV3 - Flood Risk

additional dwellings per annum. As such, the Council is failing to meet its requirement to demonstrate a five year housing land supply in accordance with PPS3 and the supporting guidance provided by CLG. It is notable that the recent application by David Wilson Homes at Land between Main Road and Rectory Road and Clements Hall Way, Hawkwell identifies an even greater shortfall in the Council's five year housing land supply.

In addition to the above, the AMR does not include a commentary on how deliverability has been assessed against the requirements of paragraph 54 of PPS3.

Furthermore, the guidance from CLG confirms that the windfall sites cannot be relied upon in demonstrating a five year supply unless a Local Planning Authority can demonstrate genuine local circumstances exist to allow this exception. However, the second paragraph of the section entitled 'Housing Trajectory and Five Year Housing Supply' confirms that the estimated completions in the years 2008 to 2013 includes estimated yields through 'intensification' coming forward in future years. With reference to the definition of 'intensification' on page 13 of the AMR, it appears that the 'Housing Trajectory and Five Year Housing Supply' also includes provision for windfall sites. As such, the Council is required to demonstrate the 'genuine local circumstances exist to allow this exception'.

The pressures on delivery and need for additional sites are more acute when it is considered that an average delivery rate of 204 dwellings per annum was achieved during a strong period of housing market growth. In view of the current economic downturn, and significant problems faced within the housing market, the Council should seek to identify appropriate and deliverable sites to meet its regional housing target provision commitments. Suitable sites would include Coombes Farm, which has been positively promoted for development through the LDF process.

It may, therefore, be more appropriate for the Council not merely to allocate sufficient sites to meet the minimum targets set down by the East of England Plan, but to identify a reservoir of land capable of coming forward for development should the sites identified through the CSS and Allocations Development Plan Documents (DPD) fail to come forward for development within the anticipated timescales.

vi. Appendix H1

As set out in the representations to the Preferred Options Core Strategy, there is continuing concern that the list of improvements to infrastructure required in support of residential development as set out in Appendix H1 fails to provide the necessary justification for its inclusion. Whilst the preamble seeks to clarify why the infrastructure is sought, the inclusion of this list should be fully justified, otherwise it is of little value. Furthermore, it would be of benefit to provide further details of the existing community infrastructure provision and capacity within the evidence base.

The failure to provide the necessary justification for its inclusion means that the CSS will not be 'founded on a robust and credible evidence base' [test of soundness in the table following Paragraph 4.52 of PPS12].

d) Character of Place

As set out in the representations to the Preferred Options Core Strategy, Colonnade considers that, with respect to the requirement to produce and adhere to Development Briefs for large residential developments, as set out in Policy CP1, the Council should not seek to impose further demands on developers where existing regulations provide sufficient requirements regarding design. In this instance, Design and Access Statements provide sufficient design guidelines for developments and there is no additional information provided in the policy or supporting text that clearly sets out the justification for this requirement.

e) Green Belt

With reference to the comments regarding the redevelopment of employment sites under the 'Housing' section above and the requirement to allocate sufficient land to meet the minimum housing provision targets as required by the East of England Plan, Colonnade considers that the chapter on Green Belt, and policy GB1 in particular, fails to provide the necessary evidence base that will allow it to be monitored effectively.

It is inherent that the proposed redevelopment of previously developed employment sites for residential use in order to reduce the requirement to allocate previously undeveloped land for residential use will displace these employment uses. In turn, therefore, the separate allocation of previously undeveloped Green Belt to accommodate the compensatory employment provision is required. This is accepted in principle at paragraph 11.11 of the CSS.

Without providing clarification of the anticipated quantum of land required to accommodate the provision of housing and compensatory and new employment land, it is not possible to monitor the performance of policy GB1.

However, using the Council's figures in the table setting out the breakdown of the housing provision figures in Chapter 4 of the CSS (assuming that actual completions and extant permissions are all on previously developed land), setting aside the displacement of employment uses referred to above, approximately 42% of the required minimum housing provision target is capable of being accommodated on previously developed land (2,005 units from a total of 4,750). As such, the Council is required to provide at least 58% of the required minimum housing provision target on the Green Belt (2,745 units from a total of 4,750).

16255 Object

CHAPTER 8 Policy ENV3 - Flood Risk

If these figures are adjusted to take account of the displacement of employment uses (assuming the provision of an equal quantity of land is required to compensate for the employment land that is redeveloped), this figure changes to 17.5% on previously developed land and 82.5% on Green Belt (828 and 3,922 units from a total of 4,750 respectively). Even allowing for the achievement of higher densities of employment on new developments, the figures above are unlikely to change significantly.

Furthermore, the table in Chapter 4 also confirms that no previously developed land will be available for development beyond 2021, or 2015 if account is taken of the displacement of the employment uses.

In light of this, not only does Chapter 6 fail to provide the necessary evidence base that will allow it to be monitored effectively, it is also necessary to consider whether it presents the most appropriate strategy for addressing the required release of Green Belt land to accommodate the defined housing and employment delivery targets to 2025 and beyond as necessary. Colonnade considers a more robust approach that is flexible and capable of being monitored, would be to clearly identify those sites capable of delivery in the short term, which for the avoidance of doubt includes those sites being promoted by Colonnade, with a reservoir of alternative sites set aside for future growth.

As set out in the representations to the Preferred Options Core Strategy, Colonnade considers that the inclusion of an affordable housing exception policy within the CSS will aid the delivery of community housing within rural areas. However, the CSS does not contain such a policy, or adequately address the issue of community housing within rural areas and the CSS is not considered to provide sufficient flexibility to allow for the delivery of essential rural housing.

f) Environmental Issues

Colonnade has concerns regarding the justification for and effectiveness of a number of the policies contained within the Environmental Issues chapter, as follows:

â€¢ Policy ENV1: The Council fails to identify how it will "maintain, restore and enhance" the sites of nature conservation importance that are identified, or how the performance of this policy will be monitored;

â€¢ Policy ENV3: In the context of the advice at paragraph 4.32 of PPS12 regarding the reformulation of national policies, Colonnade does not consider that this policy is required; and

â€¢ Policy ENV9: As set out in the representations to the Preferred Options Core Strategy, Colonnade does not consider that the necessary evidence base has been provided to justify a policy that seeks to go above and beyond the policy targets for the Code for Sustainable Homes as set out by Central Government.

g) Community Infrastructure, Leisure and Tourism

Policy CLT1 refers to the requirement for residential and employment development to contribute to the infrastructure identified in Appendix CLT1 through Standard Charges.

However, whilst the general principle of securing planning obligations through the application of standard charges is broadly accepted, the list of infrastructure requirements set out in Appendix CLT1 is not supported by sufficient evidence base to identify its robustness and credibility. As such, Colonnade does not consider either policy CLT1 or Appendix CLT1 is justified in the context of PPS12.

It is also noted that, despite the clarification sought by Colonnade at the Core Strategy Preferred Options stage, the CSS fails to confirm what information should be contained within Health Impact Assessments, which are required by policy CLT4. Once again, Colonnade requests further clarification of what is involved in the assessment and the expected outputs, which will provide greater clarity and will allow the policy to be monitored.

h) Transport

Policy T8 confirms that the Council will apply minimum parking standards. As set out in the representations to the Preferred Options Core Strategy, the guidance in Planning Policy Guidance Note 13: Transport (PPG13) is clear regarding the imposition of parking standards.

Paragraphs 52-56 of PPG13 confirm that the Local Planning Authorities should apply maximum not minimum parking standards. In order to satisfy the legal requirements set out in PPS12, the policy must reflect PPG13 to promote sustainable transport choices and further provide incentives for developers to locate further residential land closer to local service centres by requiring maximum parking standards for residential developments.

i) Economic Development

As set out in the representations to the Preferred Options Core Strategy, the land at Three Ashes Farm provides an excellent opportunity to deliver employment growth in the short term and may be a suitable site for the 'Eco-Innovation Centre' that is being promoted by the Council. Its identification as a suitable location for strategic employment growth, or the provision of an Eco-Innovation Centre, would accord with the general principles of the policies contained within Chapter 11.

Core Strategy Submission Document

16255 Object

CHAPTER 8 Policy ENV3 - Flood Risk

The identification of Purdeys Industrial Estate as fit for purpose (in paragraph 11.32 and the Council's 2008 Employment Land Study 2008) and therefore it should be maintained and if possible expanded, is welcomed and Colonnade considers that Three Ashes Farm could deliver this expansion, providing a natural extension to Purdeys Industrial Estate and being strategically located close to the Airport.

Three Ashes would address the negative impacts that the nearby residential area experiences from the existing Industrial Estate by providing a buffer between established uses and the residential area with less intensive employment activities. The highways analysis that has been carried out has suggested that it would not have an adverse impact on roads and congestion. Furthermore, there are very few opportunities for businesses to expand and Three Ashes could provide this opportunity.

j) Conclusions

Following the submission of representations to the Preferred Options Core Strategy, Colonnade is disappointed to note that the CSS fails to take account of the majority of the issues raised in their representations.

In addition, Colonnade considers the plan to be 'unsound' as the document consistently fails to meet the tests of soundness set out in the table following Paragraph 4.52 of PPS12 and respectfully requests that the Council notifies Icen, on behalf of Colonnade, of the future arrangements for the Examination of the Core Strategy. Furthermore, Colonnade wishes to take this opportunity to formally register a request to appear at all stages of the Examination in Public, including the pre-hearing meeting and any planned hearing sessions whereby issues raised in the context of this letter are to be discussed. Please confirm this request, and that the representations made to the Preferred Options Core Strategy will be taken into account alongside the current representations, by way of return to this letter.

Icen Projects, on behalf of Colonnade Land LLP trusts that the Council will find these representations to be constructive and helpful in taking forward the Core Strategy. Should you wish to discuss any aspect of these representations further, please do not hesitate to contact us.

Summary: â€¢ Policy ENV3: In the context of the advice at paragraph 4.32 of PPS12 regarding the reformulation of national policies, Colonnade does not consider that this policy is required

Support the principal of directing development to areas least at risk of flooding. The application of PPS25 exceptions test should only be applied when the sequential test has shown that there are no available locations for necessary development other than within areas at risk of flooding.

Do not support the statement that previously developed land within Flood Zone 3 should be considered ahead of greenfield land that has a lower flood risk. PPS25 does not caveat that the exceptions test can be overridden by previously developed land; flood risk needs to be considered along with other planning issues. Taking into consideration the aim to manage risk, the use of a previous developed site in an area subject to flood risk would put property and people at greater risk; particularly, when it would replace a less vulnerable use (employment), with a more vulnerable use (residential).

Amend text of first paragraph of policy to:

'We seek to direct development away from areas at risk of flooding by applying the sequential test and, where appropriate, the exceptions test, as per PPS25. It is envisaged that the majority of development can be accommodated in areas at least risk of flooding (Zone 1).'

Summary:

Support the principal of directing development to areas least at risk of flooding. The application of PPS25 exceptions test should only be applied when the sequential test has shown that there are no available locations for necessary development other than within areas at risk of flooding.

Do not support the statement that previously developed land within Flood Zone 3 should be considered ahead of greenfield land that has a lower flood risk. The wording of this policy seems to suggest that any residential development proposed on brownfield land in areas of Flood Zone 3 will be permitted regardless of the outcomes of the Sequential Test. This Policy is therefore unsound because it is not consistent with national policy set out in PPS25.

We also consider this policy to be unjustified because it is not supported by sufficient evidence to justify the underlying assumption that protecting greenbelt land should take preference to avoiding high density development in areas within Flood Zone 3 which would pose risks to life and property. The general approach of giving priority to brownfield land is in line with national policy within PPS3, however PPS3 also recognises the need to take into account environmental constraints and risks, including flood risk, in setting out strategies for the planned location of new housing in order to achieve sustainable development objectives set out in Planning Policy Statement 1 and that some sites might not therefore be suitable for housing (see paragraphs 38 and 41). This ties in with the process of applying the PPS25 Sequential Test and Exception Test which places flood risk classification and the vulnerability of proposed developments as the primary concern, with the designation of land as brownfield as a secondary consideration when applying part b of the Exception Test. Given that the national target of 60% redevelopment of previously developed land (as required by PPS3) is deemed unrealistic in Rochford District (paragraph 4.15 of this Core Strategy) and that Policy H2 indicates that there will therefore be a need to release greenbelt land in order to accommodate required growth in nonconformity with Planning Policy Guidance note 2, there is no justification to support the assumption that developing the brownfield land in the high risk flood zone is the most appropriate course of action given the reasonable alternative of accommodating those housing figures in areas at lesser flood risk - either by releasing a minimal additional amount of greenbelt, or by slightly increasing density of development elsewhere.

We do support the inclusion of the Council's intention to capitalise on opportunities to make space for water wherever possible as this is in line with government objectives as set out in "Making Space for Water".

The Council will need to provide clear and transparent justification of their decisions by carrying out a Sequential Test to support this Core Strategy document. At this stage in the development of the LDF, in the absence of an up-to-date SFRA, this would have to be based upon the Environment Agency's flood maps (future iterations for more detailed DPDS would require an up-to-date SFRA). Applying the PPS25 Sequential test will allow for all of the available alternatives to be properly assessed, including justification for the Council's decision to prioritise brownfield development in areas of flood risk when some greenbelt land in areas of lesser flood risk is already being released, or development densities could be increased in other areas.

Should the above evidence be deemed to support the Council's preferences for previously-developed land over flood risk posed to life and property, the policy will however require rewording as follows:

"The Council will direct development away from areas at risk of flooding by applying the PPS25 Sequential Test. The vast majority of development will be accommodated within Flood Zone 1, however some previously-developed land within Flood Zone 3 will be considered for residential development where this will negate the need to release Green Belt land and evidence can be provided in support of the PPS25 Exception Test.

The Council will continue to work with the Environment Agency to manage flood risk in a sustainable manner through capitalising on opportunities to make space for water wherever possible and through the continued provision of flood defences where necessary."

An alternative approach would be to reword Policy ENV3 as follows:

"The Council will apply the sequential approach to new development in line with the requirements of PPS25. Where development can only be located within areas at risk of flooding, an overall reduction in flood risk will be sought with preference given to designs that manage flood risk in a sustainable manner.

The Council will continue to work with the Environment Agency to manage flood risk in a sustainable manner through capitalising on opportunities to make space for water wherever possible, and through the continued provision of flood defences where necessary."

Please note that should the Inspector deem it necessary for us to attend the Examination in Public, we would be happy to do so but our preferred method at this time would be written representations.

CHAPTER 8 Policy ENV3 - Flood Risk

Summary:

The wording of this policy seems to suggest that any residential development proposed on brownfield land in areas of Flood Zone 3 will be permitted regardless of the outcomes of the Sequential Test. This Policy is therefore unsound because it is not consistent with national policy set out in PPS25. We also consider this policy to be unjustified because it is not supported by sufficient evidence to justify the underlying assumption that protecting greenbelt land should take preference to avoiding high density development in areas within Flood Zone 3 which would pose risks to life and property. The general approach of giving priority to brownfield land is in line with national policy within PPS3, however PPS3 also recognises the need to take into account environmental constraints and risks, including flood risk, in setting out strategies for the planned location of new housing in order to achieve sustainable development objectives set out in Planning Policy Statement 1 and that some sites might not therefore be suitable for housing (see paragraphs 38 and 41). This ties in with the process of applying the PPS25 Sequential Test and Exception Test which places flood risk classification and the vulnerability of proposed developments as the primary concern, with the designation of land as brownfield as a secondary consideration when applying part b of the Exception Test. Given that the national target of 60% redevelopment of previously developed land (as required by PPS3) is deemed unrealistic in Rochford District (paragraph 4.15 of this Core Strategy) and that Policy H2 indicates that there will therefore be a need to release greenbelt land in order to accommodate required growth in nonconformity with Planning Policy Guidance note 2, there is no justification to support the assumption that developing the brownfield land in the high risk flood zone is the most appropriate course of action given the reasonable alternative of accommodating those housing figures in areas at lesser flood risk - either by releasing a minimal additional amount of greenbelt, or by slightly increasing density of development elsewhere.

We do support the inclusion of the Council's intention to capitalise on opportunities to make space for water wherever possible as this is in line with government objectives as set out in "Making Space for Water".

Please note that should the Inspector deem it necessary for us to attend the Examination in Public, we would be happy to do so but our preferred method at this time would be written representations.

Change to Plan

The Council will need to provide clear and transparent justification of their decisions by carrying out a Sequential Test to support this Core Strategy document. At this stage in the development of the LDF, in the absence of an up-to-date SFRA, this would have to be based upon the Environment Agency's flood maps (future iterations for more detailed DPDS would require an up-to-date SFRA). Applying the PPS25 Sequential test will allow for all of the available alternatives to be properly assessed, including justification for the Council's decision to prioritise brownfield development in areas of flood risk when some greenbelt land in areas of lesser flood risk is already being released, or development densities could be increased in other areas.

Should the above evidence be deemed to support the Council's preferences for previously-developed land over flood risk posed to life and property, the policy will however require rewording as follows:

"The Council will direct development away from areas at risk of flooding by applying the PPS25 Sequential Test. The vast majority of development will be accommodated within Flood Zone 1, however some previously-developed land within Flood Zone 3 will be considered for residential development where this will negate the need to release Green Belt land and evidence can be provided in support of the PPS25 Exception Test.

The Council will continue to work with the Environment Agency to manage flood risk in a sustainable manner through capitalising on opportunities to make space for water wherever possible and through the continued provision of flood defences where necessary."

An alternative approach would be to reword Policy ENV3 as follows:

"The Council will apply the sequential approach to new development in line with the requirements of PPS25. Where development can only be located within areas at risk of flooding, an overall reduction in flood risk will be sought with preference given to designs that manage flood risk in a sustainable manner.

The Council will continue to work with the Environment Agency to manage flood risk in a sustainable manner through capitalising on opportunities to make space for water wherever possible, and through the continued provision of flood defences where necessary."

1.0 Instruction and Introduction

1.1 Charles Planning Associates Limited (Chartered Town Planners) is Instructed by Swan Hill Homes Limited (Swan Hill) to prepare and submit representations on their behalf in respect of the Rochford District Local Development Framework: Core Strategy Submission (September 2009) Development Plan Document.

1.2 The comments refer to the relevant sections and policy designations in the Submission document, as appropriate.

1.3 The comments set out in this submission are intended to assist the District Council in taking forward its Local Development Framework. It is our intention to continue to be involved in the LDF preparation process and we look forward to the opportunity to comment further at the Examination to the Core Strategy.

1.4 If you have any queries regarding the content of this submission then please do not hesitate to contact:

Peter Kneen BSc (Hons) MSc MRTPI
Planner

2.0 Housing:
Policy H1 - The Efficient Use of Land for Housing

2.1 Swan Hill recognises the importance of seeking to concentrate new developments mainly in the existing urban areas, on previously developed land where possible, particularly in view of the Government seeking to ensure 60% of all such new developments are on previously development land (PDL).

2.2 However, given the character of the District, and the strategic housing requirement of the East of England Plan, Swan Hill supports the approach that the Council must also make provision for additional development on the edge of existing settlements on greenfield sites, particularly in the most sustainable locations. As such, Swan Hill supports that where feasible, the redevelopment of existing employment sites for residential/employment purposes can make a contribution towards the strategic housing requirement, provided that sufficient additional employment land is brought forward to ensure the stability of employment levels in the District, and to ensure employment growth meets the East of England Plan requirements.

2.3 Swan Hill considers that Policy H1 should include consideration that new extensions to existing settlements have regard to their potential impact on the wider characteristics and openness objectives of the Green Belt.

Policy H2 - Extensions to Residential Envelopes and Phasing

2.4 Swan Hill generally supports the approach taken by the Council in this policy. As set out above, Swan Hill consider the Council's acknowledgment that housing requirements should be met through the allocation of land on the edge of the existing settlements is the most suitable way forward to meeting the Council's strategic housing requirement and complies with the advice in PPS3.

2.5 The need for suitable greenfield urban extensions represents the best way forward for the Council to meet its strategic housing requirement, as set out in the East of England Plan. Swan Hill supports the recognition that the potential supply of alternative previously developed sites is limited, without detrimentally affecting the character of the District, and therefore the best way forward is the use of sustainable greenfield urban extensions to the existing settlements of the District.

2.6 However, Swan Hill consider that a fundamental consideration that the District Council should consider relates to the potential impact of the urban extensions on the Green Belt policy has been somewhat overlooked. The wider sustainability credentials of the settlements of the District should only be one of many key considerations for determining the level of expansion. In view of the proximity of Southend-on-Sea to all the main settlements of the District, and the influence this has on the likely location many people would travel for employment and leisure, sustainability of many of the settlements is not a key overarching factor, and greater weight should be placed on the potential impact on the openness of the Green Belt, as this cannot be remedied if development occurs in the wrong location.

2.7 As such, Swan Hill considers that determining the location of growth for the main settlements should be to identify

16881 Support

CHAPTER 8 Policy ENV3 - Flood Risk

those locations where the impact on the wider setting of the Green Belt can be minimised. Further justification for those general locations chosen should be identified in Policy H2. In this regard, Swan Hill has serious concerns regarding the removal of Land South West of Great Wakering as a viable option for the growth of the settlement. The development of this area of Great Wakering, in addition to the potential redevelopment of the Star Lane Industrial Estate could provide a more comprehensive development, whilst ensuring that the wider openness of the Green Belt is maintained. Land South West of Great Wakering is significantly better placed to limit the impact on the wider Green Belt than Land West of Great Wakering, and could contribute to the provision of an important amenity and wildlife site for the local community.

2.8 In addition, Swan Hill consider that the Council now has no reserve provision in the event that any of the existing employment sites set out in Policy H1 fail to come forward for development within the envisaged timescale. Further, Land West of Great Wakering has not been identified in the SHLAA as a deliverable site to help meet the strategic housing requirement, contrary to the requirement set out in PPS3.

2.9 As such, Swan Hill would support the provision of suitable sites which could be safeguarded for future development in the likelihood of a shortfall in supply.

Policy H3 - Extensions to Residential Envelopes Post 2021

2.10 As set out above, Swan Hill supports the overall approach the Council has taken towards the provision of sustainable urban extensions as a suitable means of meeting their strategic housing requirement. However, as set out for Policy H2 above, Swan Hill has serious concerns regarding the removal of several proposed sites set out in the October 2008 Preferred Options Core Strategy, without any guarantee of the ability to deliver those sites set out in Policy H1.

2.11 As also considered above, the inclusion of West of Great Wakering for 250 dwellings should not be included ahead of South West of Great Wakering, in view of the fact that the site is not identified in the SHLAA as available, suitable and achievable as required by PPS3, and thus is not supported by a robust and creditable evidence base for its inclusion as a strategic site for development.

2.12 Whilst Swan Hill acknowledge that alterations to Policy H1 has resulted in the removal of some locations for growth in Policy H3 (as set out in the Sustainability Appraisal), Swan Hill does not consider that the most appropriate locations have been chosen.

2.13 In addition to the matters raised above, the use of West of Great Wakering would also result in the loss of valuable agricultural land, which clearly in a Green Belt location, should be less suitable for development than other sites, such as South West of Great Wakering, which would have limited impact on the wider Green Belt policy, and not result in the loss of valuable agricultural land.

2.14 Finally, in respect of Policies H1, H2 and H3, all of the above comments are based on our interpretation of the Submission Version Core Strategy when compared to the October 2008 Version of the Core Strategy. Without the ability to undertake a detailed assessment of the Council's SHLAA, it is not possible to clarify the proposed Core Strategy position regarding the proposed direction of growth proposed for the settlements in the District. As such, Swan Hill reserves the right to make additional representations regarding the proposed Policies H1, H2 and H3 following the publication of the SHLAA in due course.

Policy H4 - Affordable Housing

2.15 In general terms, Swan Hill supports the approach taken by the Council towards the provision of affordable housing for new residential developments. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H5 - Dwelling Types

2.16 Swan Hill supports the policy provision of H5, and considers that the approach taken by the Council for this policy represents a suitably flexible alternative to stipulating percentages of dwelling mix, sought by some local authorities. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H6 - Lifetime Homes

2.17 In regard to this policy, Swan Hill objects to the Council's policy where all new dwellings should be provided to the Lifetime Homes Standard. Whilst it is acknowledged that the UK has an aging population, Swan Hill considers that seeking to provide Lifetime Homes on all sites is considered to be overly onerous for proposed developers, particularly when considering the requirement for all car parking spaces to be suitable for disabled users, which could result in more schemes becoming unviable. Therefore, the provision of a percentage of Lifetime Homes should be considered through negotiations with the Council at the planning application stage, and should be determined on a case-by-case basis.

3.0 Character of Place: Policy CP1 - Design

16881 Support

CHAPTER 8 Policy ENV3 - Flood Risk

3.1 The Town and Country Planning (General Development Procedure) Order 1995 (As Amended) makes the submission of a Design and Access Statement for most types of planning applications a Statutory requirement, and as such, the provision of a Design Brief represents a pre-requisite of all major planning applications.

3.2 Policy CP1 seeks to ensure the provision of good, high quality developments that reflect local characteristics and distinctiveness, this ideology is supported by Swan Hill.

4.0 The Green Belt:
Policy GB1 - Green Belt Protection

4.1 Following the amendments to the wording of the Policy since the October 2008 Preferred Options Core Strategy, Swan Hill is now generally supportive of Policy GB1 and its supporting text. However, as expressed above, it is important that where alterations to the Green Belt boundary occur as a result of the extension of the settlements to meet the strategic housing requirement, both the minimal amount of land is taken and where that land is taken for development, it represents the best available land which has a minimal impact of the wider openness characteristic of the Green Belt.

5.0 Environmental Issues:
Policy ENV3 - Flood Risk

5.1 Swan Hill generally supports the approach set out in Policy ENV3 regarding ensuring development accords with the sequential test of PPS25. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV4 - Sustainable Drainage Systems (SUDS)

5.2 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV4. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV8 - On-site Renewable and Low Carbon Energy Generation

5.3 Whilst Swan Hill recognises the importance of reducing carbon emissions, particularly in new housing developments, and the role this can play in reducing the nations overall Greenhouse emissions. As such Swan Hill is generally supportive of Policy ENV8. It is noted that Policy ENG1 of the East of England Plan sets out a threshold of developments comprising 10 or more dwellings. Swan Hill consider it important for the District Council to justify the reduction in the threshold level.

5.4 Further, no assessment of Policy ENV8 has been set out in the Sustainability Appraisal which justifies the change in threshold from that of Policy ENG1 of the RSS.

Policy ENV9 - Code for Sustainable Homes

5.5 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV9. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

6.0 Community Infrastructure, Leisure and Tourism:
Policy CLT1 - Planning Obligations and Standard Charges

6.1 Swan Hill generally supports the overall approach the Council has taken in Policy CLT1. It is considered Policy CLT1 sets out a degree of flexibility to ensure that all sites are considered on a site-by-site basis, assessing the individual merits of each planning application, in order to ensure the levels of contributions applicable meet the five tests of Circular 05/05. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policies CLT5 - Open Space;
CLT7 - Play Space;
CLT8 - Youth Facilities; and,
CLT10 - Playing Pitches

6.2 Swan Hill supports the need for new residential developments to incorporate a degree of new publicly accessible open space, children's play space, youth facilities and playing pitches, and as such, generally supports the policy approaches taken by the Council.

6.3 However, it is important that whilst the Council may seek to undertake an assessment of providing standard charges for new development, which, as set out in Policy CLT1, this should be based on thorough public consultation and consideration and sound justification. Swan Hill consider that within the provision of a standard charge, it is important that such provision allows for a degree of flexibility to ensure that each site is assessed individually and on its own merits. This is particularly important for those sites close to existing open spaces and facilities. As such, the levels of

16881 Support

CHAPTER 8 Policy ENV3 - Flood Risk

open space and recreation facilities required in the 'standard charge' should be based on an up-to-date PPG17 Open Space assessment, which should be used to form a key consideration in the levels of provision likely to be required in the standard charge system proposed.

7.0 Transport: Policy T1 - Highways

7.1 Swan Hill supports the overall objectives set out in Policy T1 requiring developments to be located and designed to reduce the reliance on the private car and to meet the infrastructure needs generated by development or seek to help achieve these needs is acceptable in principle.

7.2 Swan Hill recognises the importance of providing sufficient infrastructure provision to meet the requirements of development, and that where developments have insufficient consideration of impact on existing infrastructure, they should be considered unacceptable and contrary to National policy guidance. However, Swan Hill considers it important to emphasise that the developer's role should not be seen as a means to meet existing shortfalls in provision.

Policy T3 - Public Transport

7.3 Swan Hill is generally supportive of the policy approach set out in T3, however, as set out in paragraph 7.2 above, it is important that the District Council do not consider that it is the developer's responsibility to resolve existing shortfalls in provision of public transport, and any contribution towards additional public transportation provision should only be to mitigate against the additional level of demand likely from the development proposed.

Policy T5 - Cycling and Walking

7.4 Swan Hill supports the general approach to this policy, as Swan Hill recognises the importance of promoting the use of alternatives to the private car. The policy provision acknowledges the need to ensure relevant contributions in the event of additional travel demands generated by individual developments, whilst also setting out additional aspirations for the cycle network in the District.

7.5 As such, Swan Hill considers this policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy T8 - Parking Standards

7.6 The Council has recently (January 2007) adopted SPD on the requirements for parking standards, and as such, Swan Hill generally supports the policy approach chosen by the Council. As set out in the SPD, whilst Swan Hill generally supports the approach taken by the District Council towards setting residential parking standards, in that the Council has recognised that in the suburban areas, even with some access to public transport, the majority of residents will rely on the use of private cars. However, Swan Hill has concerns over the failure of the District Council to comply with the provisions of PPG13: Transport (2001) which sets out that Local Planning Authorities should not set minimum standards for car parking. Whilst it is acknowledged that PPS3 sets out provision for the consideration of local circumstances, it is considered that the Council has not justified this deviation from PPG13's maximum standard.

7.7 Whilst it is acknowledged that such justification may become apparent through the work currently being undertaken by Essex County Council, until such time, the District Council should only seek to apply the maximum standards indicated in PPG13. However, Swan Hill recommends that the District Council make provisions in the wording of the Policy to allow for changes in the event that future policy on car parking standards need to reflect the County standard, following the completion of the County Council review.

8.0 Economic Development: Policies ED3 - Existing Employment Land ED4 - Future Employment Allocations

8.1 In respect of Policies ED3 and ED4, Swan Hill notes that they have changed considerably since the October 2008 Preferred Options document, in that they are site specific regarding the location of the proposed redevelopment of existing employment sites. These four sites are also identified in Policy H1 - Efficient Use of Land, and in general, Swan Hill supports the approach to the redevelopment of these sites (where feasible) based on the assessments of the sites set out in this version of the Core Strategy.

8.2 However, Swan Hill has concerns that these policies might not be considered suitably sound given that insufficient opportunity has been allocated for consultation on their redevelopment. Without the SHLAA being publically available prior to the consultation on this Core Strategy, an insufficient evidence base has been provided to corroborate that these sites are neither suitable or deliverable to meet the test of soundness requirements.

Summary:

Policy ENV3 - Flood Risk

5.1 Swan Hill generally supports the approach set out in Policy ENV3 regarding ensuring development accords with the sequential test of PPS25. The Policy accords with the advice of National Policy and is therefore considered sound by

View Comments (1) Policy ENV4 - Sustainable Drainage Systems (SUDS)
Quote from this section: "All residential development over 10 units will be required to incorporate runoff control via SUDS to ensure runoff and infiltration rates do not increase the likelihood of flooding".
I am not sure that this statement is accurate. Priory Chase estate (86 dwellings, school, sports centre and supermarket) and built over the last 3 years, adjoins Rawreth Lane has created a flood risk to houses in the Lane. Water is collected by a SUDS system but the Hydrabrace release system is of too high capacity. The site developers, with the approval of RDC officers, have carried out alterations to the main run-off ditch and twice this year it was within a couple of inches of overflowing. On the second occasion, RDC rapidly issued sand bags to adjacent dwellings and by doing this, by default, they were admitting it is a flood risk. The only reason the ditch did not flood over was that the rain ceased. Despite promises that the situation would be rectified, nothing has been done. Currently the local Member of Parliament is persecuting the situation.
RDC make these open ended statements in the document but in truth they do not reflect failure of actual systems they have approved in the recent past.
How do we ensure that future developments will meet the SUDS standards?

Summary:

Runoff control from the recent development at Priory Chase is very poor and the ditch the water flows through along Rawreth Lane has been close to flooding in the past year. On the second occasion, RDC rapidly issued sand bags to adjacent dwellings and by doing this, by default, they were admitting it is a flood risk.
RDC make these open ended statements in the document but in truth they do not reflect failure of actual systems they have approved in the recent past.
How do we ensure that future developments will meet the SUDS standards?

Change to Plan

Introduce strict monitoring to ensure SUDS systems are truly capable of dealing with runoff.

Full Text:

This submission should be read in connection with my comments in Representation ID 16112. The site, known in this document as 'North of London Road', slopes from its northern perimeter to the south. A basin is formed in the lower areas and is identified by the Environment Agency on their web-site as an area liable to flood. The basin opens out in a westerly direction and joins the Rawreth brook which takes runoff water to the river Crouch, which in turn, flows out to the sea. Rawreth brook, which is non tidal, passes through low lying ground in Church Road, west of Rawreth village. This is an area known to flood and water has entered adjacent dwellings on a number of occasions in the past. Most recently being within the last year. The erection of 1020 new dwellings on the site 'North of London Road' will create an enormous amount of additional water runoff, which will fall naturally towards the lower basin and then to Rawreth brook. Even with SUDS, I do not believe that the Rawreth brook will manage vast amounts of extra water. This will, without doubt, result in further and more frequent flooding of properties in Church Road.

Should the development of a major housing estate north of London Road be approved, there will be an inevitable risk of flooding on a far greater scale than exists now. Thorough flood risk assessments to eliminate the smallest possibility of flooding should be carried out and made public before any proposals to build are given approval

Summary:

1020 new dwellings on the site 'North of London Road' will create an enormous amount of additional water runoff, which will eventually fall naturally towards Rawreth Brook. Even with SUDS, Rawreth brook will not manage vast amounts of extra water resulting in more frequent flooding of properties in Church Road.

Change to Plan

In respect of the development North of London Road, a clause similar to the one below should be included. Thorough flood risk assessments to eliminate the smallest possibility of flooding should be carried out and made public before any proposals to build are given approval. If these requirements cannot be met, no housing development on this land will be given approval.

Full Text: Representations on behalf of Fairview New Homes

1. We are instructed by our client, Fairview New Homes, to submit comments on the published Core Strategy Submission Document. For ease specific reference has been made in accordance with the paragraph and policy numbers as contained in the published document. We would like the opportunity to represent our Client at the forthcoming Examination of the Core Strategy DPD and would be grateful for confirmation that this is possible.

2. Fairview New Homes have an interest in a parcel of land to the South West of Rayleigh Town Centre, as indicated on the attached site location plan. This land was previously identified in the Core Strategy Preferred Options documents to provide an urban extension to the south west of Rayleigh. This option has now been withdrawn in the Core Strategy Submission document and it is on this basis these representations are provided to the Council.

3. The Submission Core Strategy has been considered against the requirements set out at Paragraph 4.36 of PPS12 requiring core strategies to be justifiable and effective in order to be found sound, as follows:

Justified:

- i. Founded on a robust and credible evidence base
- ii. The most appropriate strategy when considered against the reasonable alternatives

Effective:

- i. Deliverable - the Core Strategy should show how the vision, objectives and strategy for the area will be delivered and by whom, and when, including who is responsible for implementing different elements of the strategy and when
- ii. Flexible - a strategy is unlikely to be effective if it cannot deal with changing circumstances. Plans should show how they will handle contingencies.
- iii. Able to be monitored - monitoring is essential for an effective strategy and will provide the basis on which the contingency plans within the strategy would be triggered.

4. To summarise our comments, Fairview New Homes strongly object to the Core Strategy as is currently presented on the basis the document is currently unsound for a number of reasons:

â€¢ The lack of robust and credible evidence base

â€¢ Failure to clearly discount reasonable alternatives

â€¢ The effectiveness of the plan is also considered to be flawed and the Council's approach to deliverability and flexibility is questioned.

5. Fundamentally, we question the soundness of the Core Strategy due to the lack of available evidence to support the choices made by the Council. In particular, there is a strong reliance on the findings of the 2009 Strategic Housing Land Availability Assessment (SHLAA) although it is understood this document is not due to be published for consideration alongside the Core Strategy. We, therefore, reserve the right to submit additional comments to the Core Strategy consultation following the publication of the SHLAA.

6. The 2009 SHLAA is clearly listed at Paragraph 1.29 of the submission Core Strategy as one of the evidence base documents the Council have drawn upon when drafting the Core Strategy. The documents listed are all considered to have played an important role in informing the Core Strategy. PPS12 also recognises at Paragraph 4.37 the importance of demonstrating how choices made in the plan are backed up by factual evidence identified in evidence base documents.

7. As a starting point it is important to state it is Fairview New Homes greatest concern there is no background provided within the Core Strategy document, or indeed any of the available evidence base documents, identifying why the Local Planning Authority has chosen to remove some of the sites previously proposed for housing development. In addition, there is also no justification as to why the retained urban extension sites are more suitable than those removed from the draft plan.

8. The following provides specific comments in response to the relevant areas of the Core Strategy.

Housing

9. It is stated at Paragraphs 4.10-4.12 that the Council have adopted a balanced approach when locating new housing between higher tier settlements and lower tier settlements. Although there is no detail provided as to how the Council

16616 Object

CHAPTER 8 Policy ENV4 - Sustainable Drainage System (SUDS)

intend on implementing this balanced approach or how the strategic allocation of housing contributes to the balance required. Our Client cannot support this approach until further detail is understood as to the proportion of housing being allocated to each settlement tier.

10. The proposed distribution of housing development during the plan period does not appear to be proportionately allocated between the various settlement tiers. We would argue that development should be distributed proportionately in line with the size of the settlement in order to benefit for available services and facilities. Rayleigh recognised as having best access to services within the district at Paragraph 2.68 of the Core Strategy. On this basis it is considered the development should primarily be directed to Rayleigh with a proportionate level of housing to the remaining settlements in the District.

Policy H1 - The efficient use of land for housing

11. In general the use of residential extensions to meet the remaining housing requirement that cannot be delivered through the redevelopment of appropriate previously developed land is supported by Fairview New Homes.

12. It is understood there is a need to prioritise use of brownfield land in line with national policy requirements but this needs to be a carefully balanced and realistic approach in identifying appropriate urban extensions to accommodate the majority of the District's housing, as identified in the table at Paragraph 4.6 and later at Paragraph 4.15.

13. Policy H1 sets out that the Council will seek the redevelopment of Rawreth Lane Industrial Estate, Foundry Industrial Estate, Stambridge Mills and Star Lane Industrial Estate. Without sight of the 2009 SHLAA it is not possible to understand whether the Council's choice to release employment land for housing is appropriate and Fairview New Homes cannot, therefore, support this element of Policy H1. This objection is further amplified by the fact additional employment land is required but is yet to be identified.

Policy H2 - Extensions to residential envelopes and phasing

14. The Council's intention to provide a balanced strategy for housing provision is mentioned again at Paragraph 4.18. The comments made at Paragraphs 9 and 10 above are also relevant in this respect.

15. In comparing the Preferred Options Core Strategy Document and Submission Core Strategy Document there is a significant reduction in the number of housing units being provided in urban extensions pre 2015, from 1450 dwellings to 775. From discussions with the Local Planning Authority it is understood the Council are seeking to provide the District's housing requirements by increased development densities. From the evidence available in the Submission Core Strategy and summary of SHLAA sites a number of the sites identified as urban extensions have in fact been allocated a reduced number of dwellings, including the land to the north of London Road, Rayleigh. We would, therefore, consider the approach taken by the Local Planning Authority to provide the required level of housing is untenable and unjustified.

16. In discounting preferred options PPS12 makes clear at Paragraph 4.38 the requirement for Local Planning Authorities to consider and evaluate reasonable alternatives. As set out above, the choices the Council have pursued have not been substantiated and without the consideration of reasonable alternatives the Core Strategy cannot be considered justified and therefore unsound.

17. However, this is our opinion based only on discussions with the Local Planning Authority rather than a thorough evidence base and we will consider the evidence in detail when it become available and provide further comment.

18. Paragraph 4.19 of the draft Core Strategy details the Council's primary factors in determining the location of future urban extensions. It is presumed the Council have assessed each of the proposed urban extension sites against the following criteria and that this information is contained within the SHLAA, although we have not been provided with any evidence of this to assess. It can be demonstrated that the land identified on the attached site location plan meets all of the requirements set out below.

â€¢ The proximity and relationship to existing centres, facilities, services

â€¢ The availability of infrastructure and/or the potential for additional infrastructure to be provided for development in such areas

â€¢ The potential to reduce private car dependency

â€¢ The potential to avoid areas of constraint (such as areas at risk of flooding, sites of ecological importance, public safety zone etc)

â€¢ The historical, agricultural and ecological value of land

â€¢ The impact on highway network (including availability and impact on existing network, as well as potential for improvements to be delivered)

â€¢ The relationship of development locations to the District's area of employment growth

â€¢ The potential to create a defensible Green Belt boundary

â€¢ The avoidance of coalescence with neighbouring settlements

19. In summary, Fairview's land is sustainably located in particularly close proximity to Rayleigh Town Centre and train station. In addition, the location of the land provides a natural extension and rounding of settlement boundary. An extension to Rayleigh in this location offers no opportunity for coalescence with neighbouring settlements nor does it constitute urban sprawl.

Core Strategy Submission Document

16616 Object

CHAPTER 8 Policy ENV4 - Sustainable Drainage System (SUDS)

Policy H2 - Extensions to residential envelopes and phasing

20. Although it is stated a flexible approach to the timings of the release of land will be maintain no explanation is provided as to why some sites are considered suitable for development pre 2015 and others post 2015. Paragraph 4.22 elaborates further to state a number of factors have been considered when determining the phasing of strategic housing sites although this information is not clearly available to assess.

21. As stated above the principle of releasing certain areas of greenbelt land is considered the best approach to meeting the Council's housing provision requirements. However, Fairview New Homes object to the omission of the land to the South West of Rayleigh for housing development as previously identified in the Core Strategy Preferred Options document. The site identified on the attached site location plan has been assessed against the Council's criteria, as set out at Paragraph 18 above and each requirement can be met. Without any clear explanation as to why this site has been discounted and the only other strategic housing site identified in Rayleigh is located further away from Rayleigh Town Centre and the associated services and facilities including the train station, Fairview New Homes object to Policy H2.

22. As considered at the outset of these representations the draft Core Strategy cannot be considered robust, and therefore sound, without clear justification and evidence base.

Policy H3 - Extension to residential envelopes post-2021

23. Policy H3 is supported on the basis that the release of greenbelt land is required for housing and this is the most appropriate approach to meet the Council's housing requirements, as set out at Paragraph 21 above.

24. However, it is unclear why some of the sites previously identified for housing development pre 2015 up until 2021 in the Preferred Options Core Strategy document have now been allocated for development post 2021, such as South East Ashingdon. It is stated at Paragraph 4.24 of the Submission Core Strategy document those areas identified for post 2021 development may not be immediately deliverable. However, there is no information available to understand why these sites are now no longer considered suitable for pre 2015 development as they were in December 2008. As a result, Fairview New Homes consider Policy H3 to be unjustified and therefore unsound.

Affordable Housing

25. The acute need for additional affordable housing is recognised at Paragraph 4.30. It is unclear from the draft Core Strategy document exactly how much affordable housing is required in the District in the plan period.

26. However, taking the starting point as set out at Paragraph 4.30 that the Thames Gateway South Essex Strategic Housing Market Assessment requires 131 net additional affordable dwellings per year which constitutes 52% of the District's overall annual housing target. In order to achieve this target using the Council's proposed policy requirement that new housing developments are to provide 35% affordable housing, 375 new dwellings would need to be developed each year. This calculation does not account for those developments with fewer than 15 dwellings which have no requirement to provide affordable housing or developments which cannot viably afford to provide non-market housing.

27. An annual requirement of 250 dwellings is identified at Paragraph 4.2 of the Core Strategy which would leave a significant short fall of affordable housing and act to compound the current situation. The approach taken by the Council ultimately accepts there will always be a shortfall in affordable housing provision and does not seek to redress this. We do not, therefore, consider this to be a robust or justified approach to achieving affordable housing in the District.

28. It is, therefore, considered in order to meet the District's affordable housing requirement additional housing land should be identified in order to ensure a wholesale increase in housing provision to address the Council's shortfall in affordable housing and meet the targets set for the plan period. The most appropriate and effective method by which to secure affordable housing provision is through developing large sites that are viably able to offer affordable housing units.

29. During the consultation of the submission Core Strategy the Council's Housing Strategy (2009) was not available and we reserve the right to make further comment on this document following the publication of this evidence.

The Green Belt

30. It is fully accepted by the Council that the Green Belt boundary is currently too tightly drawn and the release of some Green Belt land is necessary to meet the District's development requirements. However, it needs to be demonstrated that the areas of Green Belt land to be lost are justified and located in the most appropriate area and that areas of release land do not undermine the principle of the Green Belt.

31. It is understood from Paragraph 6.7 of the Submission Core Strategy the Council will seek to examine the degree to which current Green Belt land is helping to achieve the purposes of the Green Belt when considering reallocating land. However, areas of Green Belt are proposed to be reallocated for urban extensions prior to this research being undertaken.

Core Strategy Submission Document

O - 16616 - 5219 - Policy ENV4 - Sustainable Drainage System (SUDS) - i, ii

16616 Object

CHAPTER 8 Policy ENV4 - Sustainable Drainage System (SUDS)

32. Fairview New Homes fully support the justified retention of the areas of Green Belt where appropriate and the release of Green Belt land where needed. However, at present the proposed Housing policies and Green Belt policies are not coherent and the reallocation of certain areas of Green Belt is not based on a credible evidence base.

Environmental Issues

Policy ENV4 - Sustainable Drainage Systems (SUDS)

33. Fairview New Homes would like to support the flexibility contained within Policy ENV4 which recognises it is not always viably possible to incorporate SUDS in all developments.
Policy ENV8 - On Site Renewable and Low Carbon Energy Generation

34. We would also like to support Policy ENV8 on the same basis as Policy ENV4 in that it is important that the production of energy from renewable or low carbon sources is only required where it is viably possible so as not to resulting in developments not coming forward.

Transport

Policy T8 - Parking Standards

35. Fairview New Homes object to Policy T8 as it is currently contrary to National Policy requirements as set out in PPG13 which contains maximum parking standards. Indeed, this is recognised at Paragraph 10.27 of the Submission Core Strategy document. Enforcing minimum parking standards is not consistent with local or national sustainability aims and should not be an approach pursued by the Council.

Summary:

Environmental Issues

Policy ENV4 - Sustainable Drainage Systems (SUDS)

33. Fairview New Homes would like to support the flexibility contained within Policy ENV4 which recognises it is not always viably possible to incorporate SUDS in all developments.

United Kingdom
01473 706007

Full Text: Policy ENV4 is not consistent with the requirements of Approved Document H (2002) of the Building Regulations, 2000, as amended. This Approved Document H requires a drainage hierarchy to be considered for all development and priority is given to the discharge of surface water run-off using SuDS techniques.

This approach is supported by national Policy in PPS25 at paragraphs F6 and F8.

The policy must be reworded to require all developments to incorporate SuDS where possible.

Please note that should the Inspector deem it necessary for us to attend the Examination in Public, we would be happy to do so but our preferred method at this time would be written representations.

Summary: Policy ENV4 is not consistent with the requirements of Approved Document H (2002) of the Building Regulations, 2000, as amended. This Approved Document H requires a drainage hierarchy to be considered for all development and priority is given to the discharge of surface water run-off using SuDS techniques.

This approach is supported by national Policy in PPS25 at paragraphs F6 and F8.

Please note that should the Inspector deem it necessary for us to attend the Examination in Public, we would be happy to do so but our preferred method at this time would be written representations.

Change to Plan

The policy must be reworded to require all developments to incorporate SuDS where possible.

1.0 Instruction and Introduction

1.1 Charles Planning Associates Limited (Chartered Town Planners) is Instructed by Swan Hill Homes Limited (Swan Hill) to prepare and submit representations on their behalf in respect of the Rochford District Local Development Framework: Core Strategy Submission (September 2009) Development Plan Document.

1.2 The comments refer to the relevant sections and policy designations in the Submission document, as appropriate.

1.3 The comments set out in this submission are intended to assist the District Council in taking forward its Local Development Framework. It is our intention to continue to be involved in the LDF preparation process and we look forward to the opportunity to comment further at the Examination to the Core Strategy.

1.4 If you have any queries regarding the content of this submission then please do not hesitate to contact:

Peter Kneen BSc (Hons) MSc MRTPI
Planner

2.0 Housing:
Policy H1 - The Efficient Use of Land for Housing

2.1 Swan Hill recognises the importance of seeking to concentrate new developments mainly in the existing urban areas, on previously developed land where possible, particularly in view of the Government seeking to ensure 60% of all such new developments are on previously development land (PDL).

2.2 However, given the character of the District, and the strategic housing requirement of the East of England Plan, Swan Hill supports the approach that the Council must also make provision for additional development on the edge of existing settlements on greenfield sites, particularly in the most sustainable locations. As such, Swan Hill supports that where feasible, the redevelopment of existing employment sites for residential/employment purposes can make a contribution towards the strategic housing requirement, provided that sufficient additional employment land is brought forward to ensure the stability of employment levels in the District, and to ensure employment growth meets the East of England Plan requirements.

2.3 Swan Hill considers that Policy H1 should include consideration that new extensions to existing settlements have regard to their potential impact on the wider characteristics and openness objectives of the Green Belt.

Policy H2 - Extensions to Residential Envelopes and Phasing

2.4 Swan Hill generally supports the approach taken by the Council in this policy. As set out above, Swan Hill consider the Council's acknowledgment that housing requirements should be met through the allocation of land on the edge of the existing settlements is the most suitable way forward to meeting the Council's strategic housing requirement and complies with the advice in PPS3.

2.5 The need for suitable greenfield urban extensions represents the best way forward for the Council to meet its strategic housing requirement, as set out in the East of England Plan. Swan Hill supports the recognition that the potential supply of alternative previously developed sites is limited, without detrimentally affecting the character of the District, and therefore the best way forward is the use of sustainable greenfield urban extensions to the existing settlements of the District.

2.6 However, Swan Hill consider that a fundamental consideration that the District Council should consider relates to the potential impact of the urban extensions on the Green Belt policy has been somewhat overlooked. The wider sustainability credentials of the settlements of the District should only be one of many key considerations for determining the level of expansion. In view of the proximity of Southend-on-Sea to all the main settlements of the District, and the influence this has on the likely location many people would travel for employment and leisure, sustainability of many of the settlements is not a key overarching factor, and greater weight should be placed on the potential impact on the openness of the Green Belt, as this cannot be remedied if development occurs in the wrong location.

2.7 As such, Swan Hill considers that determining the location of growth for the main settlements should be to identify

Core Strategy Submission Document

S - 16882 - 8329 - Policy ENV4 - Sustainable Drainage System (SUDS) - None

16882 Support

CHAPTER 8 Policy ENV4 - Sustainable Drainage System (SUDS)

those locations where the impact on the wider setting of the Green Belt can be minimised. Further justification for those general locations chosen should be identified in Policy H2. In this regard, Swan Hill has serious concerns regarding the removal of Land South West of Great Wakering as a viable option for the growth of the settlement. The development of this area of Great Wakering, in addition to the potential redevelopment of the Star Lane Industrial Estate could provide a more comprehensive development, whilst ensuring that the wider openness of the Green Belt is maintained. Land South West of Great Wakering is significantly better placed to limit the impact on the wider Green Belt than Land West of Great Wakering, and could contribute to the provision of an important amenity and wildlife site for the local community.

2.8 In addition, Swan Hill consider that the Council now has no reserve provision in the event that any of the existing employment sites set out in Policy H1 fail to come forward for development within the envisaged timescale. Further, Land West of Great Wakering has not been identified in the SHLAA as a deliverable site to help meet the strategic housing requirement, contrary to the requirement set out in PPS3.

2.9 As such, Swan Hill would support the provision of suitable sites which could be safeguarded for future development in the likelihood of a shortfall in supply.

Policy H3 - Extensions to Residential Envelopes Post 2021

2.10 As set out above, Swan Hill supports the overall approach the Council has taken towards the provision of sustainable urban extensions as a suitable means of meeting their strategic housing requirement. However, as set out for Policy H2 above, Swan Hill has serious concerns regarding the removal of several proposed sites set out in the October 2008 Preferred Options Core Strategy, without any guarantee of the ability to deliver those sites set out in Policy H1.

2.11 As also considered above, the inclusion of West of Great Wakering for 250 dwellings should not be included ahead of South West of Great Wakering, in view of the fact that the site is not identified in the SHLAA as available, suitable and achievable as required by PPS3, and thus is not supported by a robust and creditable evidence base for its inclusion as a strategic site for development.

2.12 Whilst Swan Hill acknowledge that alterations to Policy H1 has resulted in the removal of some locations for growth in Policy H3 (as set out in the Sustainability Appraisal), Swan Hill does not consider that the most appropriate locations have been chosen.

2.13 In addition to the matters raised above, the use of West of Great Wakering would also result in the loss of valuable agricultural land, which clearly in a Green Belt location, should be less suitable for development than other sites, such as South West of Great Wakering, which would have limited impact on the wider Green Belt policy, and not result in the loss of valuable agricultural land.

2.14 Finally, in respect of Policies H1, H2 and H3, all of the above comments are based on our interpretation of the Submission Version Core Strategy when compared to the October 2008 Version of the Core Strategy. Without the ability to undertake a detailed assessment of the Council's SHLAA, it is not possible to clarify the proposed Core Strategy position regarding the proposed direction of growth proposed for the settlements in the District. As such, Swan Hill reserves the right to make additional representations regarding the proposed Policies H1, H2 and H3 following the publication of the SHLAA in due course.

Policy H4 - Affordable Housing

2.15 In general terms, Swan Hill supports the approach taken by the Council towards the provision of affordable housing for new residential developments. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H5 - Dwelling Types

2.16 Swan Hill supports the policy provision of H5, and considers that the approach taken by the Council for this policy represents a suitably flexible alternative to stipulating percentages of dwelling mix, sought by some local authorities. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H6 - Lifetime Homes

2.17 In regard to this policy, Swan Hill objects to the Council's policy where all new dwellings should be provided to the Lifetime Homes Standard. Whilst it is acknowledged that the UK has an aging population, Swan Hill considers that seeking to provide Lifetime Homes on all sites is considered to be overly onerous for proposed developers, particularly when considering the requirement for all car parking spaces to be suitable for disabled users, which could result in more schemes becoming unviable. Therefore, the provision of a percentage of Lifetime Homes should be considered through negotiations with the Council at the planning application stage, and should be determined on a case-by-case basis.

3.0 Character of Place: Policy CP1 - Design

Core Strategy Submission Document

S - 16882 - 8329 - Policy ENV4 - Sustainable Drainage System (SUDS) - None

16882 Support

CHAPTER 8 Policy ENV4 - Sustainable Drainage System (SUDS)

3.1 The Town and Country Planning (General Development Procedure) Order 1995 (As Amended) makes the submission of a Design and Access Statement for most types of planning applications a Statutory requirement, and as such, the provision of a Design Brief represents a pre-requisite of all major planning applications.

3.2 Policy CP1 seeks to ensure the provision of good, high quality developments that reflect local characteristics and distinctiveness, this ideology is supported by Swan Hill.

4.0 The Green Belt:
Policy GB1 - Green Belt Protection

4.1 Following the amendments to the wording of the Policy since the October 2008 Preferred Options Core Strategy, Swan Hill is now generally supportive of Policy GB1 and its supporting text. However, as expressed above, it is important that where alterations to the Green Belt boundary occur as a result of the extension of the settlements to meet the strategic housing requirement, both the minimal amount of land is taken and where that land is taken for development, it represents the best available land which has a minimal impact of the wider openness characteristic of the Green Belt.

5.0 Environmental Issues:
Policy ENV3 - Flood Risk

5.1 Swan Hill generally supports the approach set out in Policy ENV3 regarding ensuring development accords with the sequential test of PPS25. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV4 - Sustainable Drainage Systems (SUDS)

5.2 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV4. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV8 - On-site Renewable and Low Carbon Energy Generation

5.3 Whilst Swan Hill recognises the importance of reducing carbon emissions, particularly in new housing developments, and the role this can play in reducing the nations overall Greenhouse emissions. As such Swan Hill is generally supportive of Policy ENV8. It is noted that Policy ENG1 of the East of England Plan sets out a threshold of developments comprising 10 or more dwellings. Swan Hill consider it important for the District Council to justify the reduction in the threshold level.

5.4 Further, no assessment of Policy ENV8 has been set out in the Sustainability Appraisal which justifies the change in threshold from that of Policy ENG1 of the RSS.

Policy ENV9 - Code for Sustainable Homes

5.5 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV9. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

6.0 Community Infrastructure, Leisure and Tourism:
Policy CLT1 - Planning Obligations and Standard Charges

6.1 Swan Hill generally supports the overall approach the Council has taken in Policy CLT1. It is considered Policy CLT1 sets out a degree of flexibility to ensure that all sites are considered on a site-by-site basis, assessing the individual merits of each planning application, in order to ensure the levels of contributions applicable meet the five tests of Circular 05/05. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policies CLT5 - Open Space;
CLT7 - Play Space;
CLT8 - Youth Facilities; and,
CLT10 - Playing Pitches

6.2 Swan Hill supports the need for new residential developments to incorporate a degree of new publicly accessible open space, children's play space, youth facilities and playing pitches, and as such, generally supports the policy approaches taken by the Council.

6.3 However, it is important that whilst the Council may seek to undertake an assessment of providing standard charges for new development, which, as set out in Policy CLT1, this should be based on thorough public consultation and consideration and sound justification. Swan Hill consider that within the provision of a standard charge, it is important that such provision allows for a degree of flexibility to ensure that each site is assessed individually and on its own merits. This is particularly important for those sites close to existing open spaces and facilities. As such, the levels of

Core Strategy Submission Document

S - 16882 - 8329 - Policy ENV4 - Sustainable Drainage System (SUDS) - None

16882 Support

CHAPTER 8 Policy ENV4 - Sustainable Drainage System (SUDS)

open space and recreation facilities required in the 'standard charge' should be based on an up-to-date PPG17 Open Space assessment, which should be used to form a key consideration in the levels of provision likely to be required in the standard charge system proposed.

7.0 Transport: Policy T1 - Highways

7.1 Swan Hill supports the overall objectives set out in Policy T1 requiring developments to be located and designed to reduce the reliance on the private car and to meet the infrastructure needs generated by development or seek to help achieve these needs is acceptable in principle.

7.2 Swan Hill recognises the importance of providing sufficient infrastructure provision to meet the requirements of development, and that where developments have insufficient consideration of impact on existing infrastructure, they should be considered unacceptable and contrary to National policy guidance. However, Swan Hill considers it important to emphasise that the developer's role should not be seen as a means to meet existing shortfalls in provision.

Policy T3 - Public Transport

7.3 Swan Hill is generally supportive of the policy approach set out in T3, however, as set out in paragraph 7.2 above, it is important that the District Council do not consider that it is the developer's responsibility to resolve existing shortfalls in provision of public transport, and any contribution towards additional public transportation provision should only be to mitigate against the additional level of demand likely from the development proposed.

Policy T5 - Cycling and Walking

7.4 Swan Hill supports the general approach to this policy, as Swan Hill recognises the importance of promoting the use of alternatives to the private car. The policy provision acknowledges the need to ensure relevant contributions in the event of additional travel demands generated by individual developments, whilst also setting out additional aspirations for the cycle network in the District.

7.5 As such, Swan Hill considers this policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy T8 - Parking Standards

7.6 The Council has recently (January 2007) adopted SPD on the requirements for parking standards, and as such, Swan Hill generally supports the policy approach chosen by the Council. As set out in the SPD, whilst Swan Hill generally supports the approach taken by the District Council towards setting residential parking standards, in that the Council has recognised that in the suburban areas, even with some access to public transport, the majority of residents will rely on the use of private cars. However, Swan Hill has concerns over the failure of the District Council to comply with the provisions of PPG13: Transport (2001) which sets out that Local Planning Authorities should not set minimum standards for car parking. Whilst it is acknowledged that PPS3 sets out provision for the consideration of local circumstances, it is considered that the Council has not justified this deviation from PPG13's maximum standard.

7.7 Whilst it is acknowledged that such justification may become apparent through the work currently being undertaken by Essex County Council, until such time, the District Council should only seek to apply the maximum standards indicated in PPG13. However, Swan Hill recommends that the District Council make provisions in the wording of the Policy to allow for changes in the event that future policy on car parking standards need to reflect the County standard, following the completion of the County Council review.

8.0 Economic Development: Policies ED3 - Existing Employment Land ED4 - Future Employment Allocations

8.1 In respect of Policies ED3 and ED4, Swan Hill notes that they have changed considerably since the October 2008 Preferred Options document, in that they are site specific regarding the location of the proposed redevelopment of existing employment sites. These four sites are also identified in Policy H1 - Efficient Use of Land, and in general, Swan Hill supports the approach to the redevelopment of these sites (where feasible) based on the assessments of the sites set out in this version of the Core Strategy.

8.2 However, Swan Hill has concerns that these policies might not be considered suitably sound given that insufficient opportunity has been allocated for consultation on their redevelopment. Without the SHLAA being publically available prior to the consultation on this Core Strategy, an insufficient evidence base has been provided to corroborate that these sites are neither suitable or deliverable to meet the test of soundness requirements.

Summary:

Policy ENV4 - Sustainable Drainage Systems (SUDS)

5.2 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV4. The Policy accords with the advice of National Policy and is therefore considered

Full Text: Representations to Policies ENV 6, 7 and 8

Unsound: (i) not consistent with national policy (ii) not justified: not found on a robust evidence base, and (iii) not effective; not deliverable/flexible.

The requirements of these policies are generally, in principle, reasonable.

However we have several points of concern/issues.

1. Regarding the statement in paragraph 8.32 that "the use of biomass heating will not be supported...." A policy (or in this case a supporting statement to the policy) should not be prescriptive with regard to technologies. Technology and product innovation is advancing so quickly that this reference is not applicable with the majority of products on the market.

Furthermore, Building Regulations Parts F and L recently consulted on, and Part J now subject to consultation do not discriminate against such systems. According, flexibility in approaches should be upheld and specific quality metrics applied through Building Regulations and the CSH, and not planning policy. This will ensure that the most sustainable technologies are employed, by way of example 'Pyrolysis' would not be allowed, with the Core Strategy in its current form. There are no detrimental affects with regard to air quality when running such plant. Indeed, this plant runs on municipal waste, rubber tyres etc and biofuels.

Changes necessary to make the Core Strategy sound

The statement that "the use of biomass heating will not be supported...." should be deleted from paragraph 8.32. This section should accord with the flexible principles outlined in PPS1 and its supplement.

2. Given the current consultation of the Definition of Zero Carbon Homes, it is particularly difficult to comment on the proposals outlined. Indeed, CSH must also be revised to align with the regulatory definition of a zero carbon, as will the recent consultation documents for SAP, Part F and L of Building Regulations and the current Part J consultation.

We agree with principles of the Governments 'Energy Hierarchy' as far the energy efficiency measures are concerned, but we do not believe the incorporation of on-site renewable energy equipment to reduce predicted CO2 emissions by at least 10% above and beyond Building Regulations requirement, or indeed a district energy solution is most satisfactory manner to reduce emissions.

This view is substantiated by UK-GBC (in its 'Definition of Zero Carbon Report' May 2008), the First London Report 'Cutting the Capital's Carbon Footprint - Delivering Decentralised Energy' and much ongoing research. For example, we are currently working with the UK-GBC and the Zero Carbon Hub 'District Sustainable Infrastructure - Task Group' and will be reporting our findings to Ministers in late November 2009. Whilst, we cannot share the details of the draft reports, it can be stated that flexibility in the planning of developments must be maintained.

The principle of decreasing CO2 emissions by targeting reductions through energy efficiency measures is favoured by the CLG (as described in the December 2008 Zero Carbon consultation document).

Decreasing the operational carbon emissions of the site by reducing the heat demands of each dwelling has the benefit of reduced fuel bills for the occupiers. This will also improve the rating of the Energy Efficiency index on each Energy Performance Certificate (EPC), making these dwellings more appealing to potential residents, and attracting residents concerned with energy conservation.

Schemes which utilise CHP and renewable energy generated heat, such as biomass, whilst decreasing CO2 emissions by offsetting inefficient electricity production and burning 'green' fuel will actually increase the fuel bills for the residents.

Reducing the fundamental base heat demands is the only fail-safe way of keeping the heating costs down in the dwellings. This is imperative for the affordability of all dwellings, as it safeguards against fuel poverty in a volatile fuel market. Furthermore, renewable energy and CHP installations are cost intensive and they often diminish funds that could otherwise go towards fabric enhancement.

Core Strategy Submission Document

O - 16224 - 8650 - Policy ENV6 - Large Scale Renewable Energy Projects - i, ii, iii

16224 Object

CHAPTER 8 Policy ENV6 - Large Scale Renewable Energy Projects

CHP and renewables, whilst technically reducing CO2 emissions, do nothing to decrease the energy demands of a dwelling, and often actually conceal a less efficient building.

Furthermore the extensive below ground heating pipework network required on most sites is more prone to heat loss and leakage. The installation of private heating pipework within adoptable roads creates issues of responsibility which are still not fully resolved within the UK.

District heating maybe more suited to high/super density developments that have a balanced load profile (a mix of uses). Although, as proven by the UK-GBC, in its 'Definition of Zero Carbon Report' May 2008, some 80% of schemes would not be deliverable. Subsequently, CLG has consulting on the 1. Energy efficiency 2. Carbon compliance and; Allowable solutions approach - to date no definitive policy has been announced.

Whilst, it is not possible to guess the outcome of the many consultations, our (and our) peer group view (shared with CLG, DBERR and DEFRA, DECC and Treasury through meetings arranged by invitation) is that the allowable solutions (depending on the cost of carbon) with the Energy efficiency measures will form future policy and regulations.

District heating systems have inherent issues of accountability. This is fuelled by occupiers perceiving little control over their heating bills and the lack of choice (e.g. lock-in) for the supply of heat. Additionally, combined heat and power only becomes financially viable if the power can be utilised on site (private wire system) as current policy dictates that exporting to the grid is not economically viable.

Private wire systems lock users into one supplier and after a recent European court (Citiworks) case, the whole legality of private wire in the UK is now uncertain - this is subject to further DECC/CLG(?) consultation later this year. The proposed individual/local heating systems and individual utility supplies give occupants the freedom of choice.

With regard to Policy ENV 8, whilst we are pleased to see that measures will not be required if "not feasible or viable", but it is not clear that this statement has had regard to the overall costs of bringing sites to the market (including the costs of any necessary supporting infrastructure) and the need to avoid any adverse impact of development on the needs of the community etc. The definition of "feasibility" needs to be a broad one, and include technological viability as well as commercial drivers.

Summary:

These policies must be underpinned by viability testing. It should be stated that the level/extent of renewable energy or energy generation measures applicable to any development site will be assessed against an evidence-based understanding of local feasibility and viability and the potential for the delivery of sustainable technologies/measures on the particular site. When considering which measures are to be provided on a site, the cost implications of the infrastructure needs of that site will need to be considered in the round.

Change to Plan

It is strongly recommended that more detailed consideration is given to the requirements of Policies ENV6, ENV7 and ENV 8 before adopting such measures.

These policies must be underpinned by viability testing. It should be stated that the level/extent of renewable energy or energy generation measures applicable to any development site will be assessed against an evidence-based understanding of local feasibility and viability and the potential for the delivery of sustainable technologies/measures on the particular site. When considering which measures are to be provided on a site, the cost implications of the infrastructure needs of that site will need to be considered in the round.

Viability/feasibility work will be undertaken by the local authority to define appropriate targets and measures for each site, including strategic Greenfield sites.

It should be made clear that any requirements for sustainability/energy conservation and generation measures should be linked to the national policy applicable at the time (at the time of a planning application or any previous Design Brief or Master Plan, Concept Statement which sets the requirements for that particular site) and have regard to viability/feasibility work.

Full Text: ROCHFORD LOCAL DEVELOPMENT FRAMEWORK
CORE STRATEGY SUBMISSION DOCUMENT

Thank you for your letter dated 21 September 2009 consulting English Heritage on the above document. Our comments are set out below.

CHAPTER 4 HOUSING

Vision and objectives

While we note that character of place is addressed in chapter 5, it is important that this consideration is recognised as relevant within the Housing chapter. Paras 2.33, 2.69 and 2.73 also recognise the importance of character and sense of place in the built environment. We recommend that this consideration should be integrated into the vision and objectives for housing in order to improve the clarity of the plan, and its consistency with advice in PPS1.

Recommendation:

The following amendments are suggested:

- Vision in five years: add 'settlement character' after 'infrastructure'
- Vision by 2025: add 'and places' after 'communities' in bullet 1
- Objectives: In objective 2 amend to '...sustainable locations, enhancing sense of place and having regard to..'
- Para 4.19: Amend bullet 5 to read 'The historical, agricultural and ecological value of land, and settlement character'

CHAPTER 5 CHARACTER OF PLACE

We strongly support this section and policies CP1, CP2 and CP3. In the absence of policy coverage for listed buildings and scheduled monuments we recommend that para 5.9 should refer to PPGs 15 and 16, as well as draft PPS15.

CHAPTER 8 ENVIRONMENTAL ISSUES

We welcome the references the historic environment in the objectives and in policies ENV1 and ENV2.

Policy ENV6 Large Scale Renewable Energy Projects

We consider that this policy should refer to the historic interest of sites to reflect the advice in PPS22 more appropriately.

Recommendation: amend the first bullet in policy ENV6 to read '...it's ecological, historic or landscape value...'

CHAPTER 11 ECONOMIC DEVELOPMENT

Policy ED2 London Southend Airport

We understand that the grade I listed church in the vicinity of the runway will be protected in any proposals for expansion of the airport and the Core Strategy policy does not suggest otherwise. We will respond to the detail of proposals for the airport through responses to consultations on the Joint Area Action Plan and any planning applications.

In the interests of clarity, the above comments where we suggest changes to the Core Strategy should be recorded as objections to the soundness of the plan in terms of consistency with national guidance. However, we hope that it will be possible to agree amendments on these points prior to the public examination.

We would be happy to discuss any of these comments if you would find this useful.

Summary: Policy ENV6 Large Scale Renewable Energy Projects

We consider that this policy should refer to the historic interest of sites to reflect the advice in PPS22 more appropriately.

Change to Plan Recommendation: amend the first bullet in policy ENV6 to read '...it's ecological, historic or landscape value...'

Full Text: Representations relate to policies ENV6, 7 and 8

Unsound: (i) not consistent with national policy (ii) not justified: not found on a robust evidence base, and (iii) not effective; not deliverable/flexible.

The requirements of these policies are generally, in principle, reasonable.

However we have several points of concern/issues.

1. Regarding the statement in paragraph 8.32 that "the use of biomass heating will not be supported...." A policy (or in this case a supporting statement to the policy) should not be prescriptive with regard to technologies. Technology and product innovation is advancing so quickly that this reference is not applicable with the majority of products on the market.

Furthermore, Building Regulations Parts F and L recently consulted on, and Part J now subject to consultation do not discriminate against such systems. According, flexibility in approaches should be upheld and specific quality metrics applied through Building Regulations and the CSH, and not planning policy. This will ensure that the most sustainable technologies are employed, by way of example 'Pyrolysis' would not be allowed, with the Core Strategy in its current form. There are no detrimental affects with regard to air quality when running such plant. Indeed, this plant runs on municipal waste, rubber tyres etc and biofuels.

Changes necessary to make the Core Strategy sound

The statement that "the use of biomass heating will not be supported...." should be deleted from paragraph 8.32. This section should accord with the flexible principles outlined in PPS1 and its supplement.

2. Given the current consultation of the Definition of Zero Carbon Homes, it is particularly difficult to comment on the proposals outlined. Indeed, CSH must also be revised to align with the regulatory definition of a zero carbon, as will the recent consultation documents for SAP, Part F and L of Building Regulations and the current Part J consultation.

We agree with principles of the Governments 'Energy Hierarchy' as far the energy efficiency measures are concerned, but we do not believe the incorporation of on-site renewable energy equipment to reduce predicted CO2 emissions by at least 10% above and beyond Building Regulations requirement, or indeed a district energy solution is most satisfactory manner to reduce emissions.

This view is substantiated by UK-GBC (in its 'Definition of Zero Carbon Report' May 2008), the First London Report 'Cutting the Capital's Carbon Footprint - Delivering Decentralised Energy' and much ongoing research. For example, we are currently working with the UK-GBC and the Zero Carbon Hub 'District Sustainable Infrastructure - Task Group' and will be reporting our findings to Ministers in late November 2009. Whilst, we cannot share the details of the draft reports, it can be stated that flexibility in the planning of developments must be maintained.

The principle of decreasing CO2 emissions by targeting reductions through energy efficiency measures is favoured by the CLG (as described in the December 2008 Zero Carbon consultation document).

Decreasing the operational carbon emissions of the site by reducing the heat demands of each dwelling has the benefit of reduced fuel bills for the occupiers. This will also improve the rating of the Energy Efficiency index on each Energy Performance Certificate (EPC), making these dwellings more appealing to potential residents, and attracting residents concerned with energy conservation.

Schemes which utilise CHP and renewable energy generated heat, such as biomass, whilst decreasing CO2 emissions by offsetting inefficient electricity production and burning 'green' fuel will actually increase the fuel bills for the residents.

Reducing the fundamental base heat demands is the only fail-safe way of keeping the heating costs down in the dwellings. This is imperative for the affordability of all dwellings, as it safeguards against fuel poverty in a volatile fuel market. Furthermore, renewable energy and CHP installations are cost intensive and they often diminish funds that could otherwise go towards fabric enhancement.

Core Strategy Submission Document

O - 16225 - 8650 - Policy ENV7 - Small Scale Renewable Energy Projects - i, ii, iii

16225 Object

CHAPTER 8 Policy ENV7 - Small Scale Renewable Energy Projects

CHP and renewables, whilst technically reducing CO2 emissions, do nothing to decrease the energy demands of a dwelling, and often actually conceal a less efficient building.

Furthermore the extensive below ground heating pipework network required on most sites is more prone to heat loss and leakage. The installation of private heating pipework within adoptable roads creates issues of responsibility which are still not fully resolved within the UK.

District heating maybe more suited to high/super density developments that have a balanced load profile (a mix of uses). Although, as proven by the UK-GBC, in its 'Definition of Zero Carbon Report' May 2008, some 80% of schemes would not be deliverable. Subsequently, CLG has consulting on the 1. Energy efficiency 2. Carbon compliance and; Allowable solutions approach - to date no definitive policy has been announced.

Whilst, it is not possible to guess the outcome of the many consultations, our (and our) peer group view (shared with CLG, DBERR and DEFRA, DECC and Treasury through meetings arranged by invitation) is that the allowable solutions (depending on the cost of carbon) with the Energy efficiency measures will form future policy and regulations.

District heating systems have inherent issues of accountability. This is fuelled by occupiers perceiving little control over their heating bills and the lack of choice (e.g. lock-in) for the supply of heat. Additionally, combined heat and power only becomes financially viable if the power can be utilised on site (private wire system) as current policy dictates that exporting to the grid is not economically viable.

Private wire systems lock users into one supplier and after a recent European court (Citiworks) case, the whole legality of private wire in the UK is now uncertain - this is subject to further DECC/CLG(?) consultation later this year. The proposed individual/local heating systems and individual utility supplies give occupants the freedom of choice.

With regard to Policy ENV 8, whilst we are pleased to see that measures will not be required if "not feasible or viable", but it is not clear that this statement has had regard to the overall costs of bringing sites to the market (including the costs of any necessary supporting infrastructure) and the need to avoid any adverse impact of development on the needs of the community etc. The definition of "feasibility" needs to be a broad one, and include technological viability as well as commercial drivers.

Summary:

These policies must be underpinned by viability testing. It should be stated that the level/extent of renewable energy or energy generation measures applicable to any development site will be assessed against an evidence-based understanding of local feasibility and viability and the potential for the delivery of sustainable technologies/measures on the particular site. When considering which measures are to be provided on a site, the cost implications of the infrastructure needs of that site will need to be considered in the round.

Change to Plan

The statement that "the use of biomass heating will not be supported...." should be deleted from paragraph 8.32. This section should accord with the flexible principles outlined in PPS1 and its supplement.

Other changes necessary to make the Core Strategy sound

It is strongly recommended that more detailed consideration is given to the requirements of Policies ENV6, ENV7 and ENV 8 before adopting such measures.

These policies must be underpinned by viability testing. It should be stated that the level/extent of renewable energy or energy generation measures applicable to any development site will be assessed against an evidence-based understanding of local feasibility and viability and the potential for the delivery of sustainable technologies/measures on the particular site. Full Text: Representations on behalf of Fairview New Homes

1. We are instructed by our client, Fairview New Homes, to submit comments on the published Core Strategy Submission Document. For ease specific reference has been made in accordance with the paragraph and policy numbers as contained in the published document. We would like the opportunity to represent our Client at the forthcoming Examination of the Core Strategy DPD and would be grateful for confirmation that this is possible.

2. Fairview New Homes have an interest in a parcel of land to the South West of Rayleigh Town Centre, as indicated on the attached site location plan. This land was previously identified in the Core Strategy Preferred Options documents to provide an urban extension to the south west of Rayleigh. This option has now been withdrawn in the Core Strategy Submission document and it is on this basis these representations are provided to the Council.

3. The Submission Core Strategy has been considered against the requirements set out at Paragraph 4.36 of PPS12 requiring core strategies to be justifiable and effective in order to be found sound, as follows:

Justified:

- i. Founded on a robust and credible evidence base
- ii. The most appropriate strategy when considered against the reasonable alternatives

Effective:

- i. Deliverable - the Core Strategy should show how the vision, objectives and strategy for the area will be delivered and by whom, and when, including who is responsible for implementing different elements of the strategy and when
- ii. Flexible - a strategy is unlikely to be effective if it cannot deal with changing circumstances. Plans should show how they will handle contingencies.
- iii. Able to be monitored - monitoring is essential for an effective strategy and will provide the basis on which the contingency plans within the strategy would be triggered.

4. To summarise our comments, Fairview New Homes strongly object to the Core Strategy as is currently presented on the basis the document is currently unsound for a number of reasons:

â€¢ The lack of robust and credible evidence base

â€¢ Failure to clearly discount reasonable alternatives

â€¢ The effectiveness of the plan is also considered to be flawed and the Council's approach to deliverability and flexibility is questioned.

5. Fundamentally, we question the soundness of the Core Strategy due to the lack of available evidence to support the choices made by the Council. In particular, there is a strong reliance on the findings of the 2009 Strategic Housing Land Availability Assessment (SHLAA) although it is understood this document is not due to be published for consideration alongside the Core Strategy. We, therefore, reserve the right to submit additional comments to the Core Strategy consultation following the publication of the SHLAA.

6. The 2009 SHLAA is clearly listed at Paragraph 1.29 of the submission Core Strategy as one of the evidence base documents the Council have drawn upon when drafting the Core Strategy. The documents listed are all considered to have played an important role in informing the Core Strategy. PPS12 also recognises at Paragraph 4.37 the importance of demonstrating how choices made in the plan are backed up by factual evidence identified in evidence base documents.

7. As a starting point it is important to state it is Fairview New Homes greatest concern there is no background provided within the Core Strategy document, or indeed any of the available evidence base documents, identifying why the Local Planning Authority has chosen to remove some of the sites previously proposed for housing development. In addition, there is also no justification as to why the retained urban extension sites are more suitable than those removed from the draft plan.

8. The following provides specific comments in response to the relevant areas of the Core Strategy.

Housing

9. It is stated at Paragraphs 4.10-4.12 that the Council have adopted a balanced approach when locating new housing between higher tier settlements and lower tier settlements. Although there is no detail provided as to how the Council

Core Strategy Submission Document

16617 Object

CHAPTER 8 Policy ENV8 - On-Site Renewable and Low Carbon Energy Generation

intend on implementing this balanced approach or how the strategic allocation of housing contributes to the balance required. Our Client cannot support this approach until further detail is understood as to the proportion of housing being allocated to each settlement tier.

10. The proposed distribution of housing development during the plan period does not appear to be proportionately allocated between the various settlement tiers. We would argue that development should be distributed proportionately in line with the size of the settlement in order to benefit for available services and facilities. Rayleigh recognised as having best access to services within the district at Paragraph 2.68 of the Core Strategy. On this basis it is considered the development should primarily be directed to Rayleigh with a proportionate level of housing to the remaining settlements in the District.

Policy H1 - The efficient use of land for housing

11. In general the use of residential extensions to meet the remaining housing requirement that cannot be delivered through the redevelopment of appropriate previously developed land is supported by Fairview New Homes.

12. It is understood there is a need to prioritise use of brownfield land in line with national policy requirements but this needs to be a carefully balanced and realistic approach in identifying appropriate urban extensions to accommodate the majority of the District's housing, as identified in the table at Paragraph 4.6 and later at Paragraph 4.15.

13. Policy H1 sets out that the Council will seek the redevelopment of Rawreth Lane Industrial Estate, Foundry Industrial Estate, Stambridge Mills and Star Lane Industrial Estate. Without sight of the 2009 SHLAA it is not possible to understand whether the Council's choice to release employment land for housing is appropriate and Fairview New Homes cannot, therefore, support this element of Policy H1. This objection is further amplified by the fact additional employment land is required but is yet to be identified.

Policy H2 - Extensions to residential envelopes and phasing

14. The Council's intention to provide a balanced strategy for housing provision is mentioned again at Paragraph 4.18. The comments made at Paragraphs 9 and 10 above are also relevant in this respect.

15. In comparing the Preferred Options Core Strategy Document and Submission Core Strategy Document there is a significant reduction in the number of housing units being provided in urban extensions pre 2015, from 1450 dwellings to 775. From discussions with the Local Planning Authority it is understood the Council are seeking to provide the District's housing requirements by increased development densities. From the evidence available in the Submission Core Strategy and summary of SHLAA sites a number of the sites identified as urban extensions have in fact been allocated a reduced number of dwellings, including the land to the north of London Road, Rayleigh. We would, therefore, consider the approach taken by the Local Planning Authority to provide the required level of housing is untenable and unjustified.

16. In discounting preferred options PPS12 makes clear at Paragraph 4.38 the requirement for Local Planning Authorities to consider and evaluate reasonable alternatives. As set out above, the choices the Council have pursued have not been substantiated and without the consideration of reasonable alternatives the Core Strategy cannot be considered justified and therefore unsound.

17. However, this is our opinion based only on discussions with the Local Planning Authority rather than a thorough evidence base and we will consider the evidence in detail when it become available and provide further comment.

18. Paragraph 4.19 of the draft Core Strategy details the Council's primary factors in determining the location of future urban extensions. It is presumed the Council have assessed each of the proposed urban extension sites against the following criteria and that this information is contained within the SHLAA, although we have not been provided with any evidence of this to assess. It can be demonstrated that the land identified on the attached site location plan meets all of the requirements set out below.

â€¢ The proximity and relationship to existing centres, facilities, services

â€¢ The availability of infrastructure and/or the potential for additional infrastructure to be provided for development in such areas

â€¢ The potential to reduce private car dependency

â€¢ The potential to avoid areas of constraint (such as areas at risk of flooding, sites of ecological importance, public safety zone etc)

â€¢ The historical, agricultural and ecological value of land

â€¢ The impact on highway network (including availability and impact on existing network, as well as potential for improvements to be delivered)

â€¢ The relationship of development locations to the District's area of employment growth

â€¢ The potential to create a defensible Green Belt boundary

â€¢ The avoidance of coalescence with neighbouring settlements

19. In summary, Fairview's land is sustainably located in particularly close proximity to Rayleigh Town Centre and train station. In addition, the location of the land provides a natural extension and rounding of settlement boundary. An extension to Rayleigh in this location offers no opportunity for coalescence with neighbouring settlements nor does it constitute urban sprawl.

Core Strategy Submission Document

16617 Object

CHAPTER 8 Policy ENV8 - On-Site Renewable and Low Carbon Energy Generation

Policy H2 - Extensions to residential envelopes and phasing

20. Although it is stated a flexible approach to the timings of the release of land will be maintain no explanation is provided as to why some sites are considered suitable for development pre 2015 and others post 2015. Paragraph 4.22 elaborates further to state a number of factors have been considered when determining the phasing of strategic housing sites although this information is not clearly available to assess.

21. As stated above the principle of releasing certain areas of greenbelt land is considered the best approach to meeting the Council's housing provision requirements. However, Fairview New Homes object to the omission of the land to the South West of Rayleigh for housing development as previously identified in the Core Strategy Preferred Options document. The site identified on the attached site location plan has been assessed against the Council's criteria, as set out at Paragraph 18 above and each requirement can be met. Without any clear explanation as to why this site has been discounted and the only other strategic housing site identified in Rayleigh is located further away from Rayleigh Town Centre and the associated services and facilities including the train station, Fairview New Homes object to Policy H2.

22. As considered at the outset of these representations the draft Core Strategy cannot be considered robust, and therefore sound, without clear justification and evidence base.

Policy H3 - Extension to residential envelopes post-2021

23. Policy H3 is supported on the basis that the release of greenbelt land is required for housing and this is the most appropriate approach to meet the Council's housing requirements, as set out at Paragraph 21 above.

24. However, it is unclear why some of the sites previously identified for housing development pre 2015 up until 2021 in the Preferred Options Core Strategy document have now been allocated for development post 2021, such as South East Ashingdon. It is stated at Paragraph 4.24 of the Submission Core Strategy document those areas identified for post 2021 development may not be immediately deliverable. However, there is no information available to understand why these sites are now no longer considered suitable for pre 2015 development as they were in December 2008. As a result, Fairview New Homes consider Policy H3 to be unjustified and therefore unsound.

Affordable Housing

25. The acute need for additional affordable housing is recognised at Paragraph 4.30. It is unclear from the draft Core Strategy document exactly how much affordable housing is required in the District in the plan period.

26. However, taking the starting point as set out at Paragraph 4.30 that the Thames Gateway South Essex Strategic Housing Market Assessment requires 131 net additional affordable dwellings per year which constitutes 52% of the District's overall annual housing target. In order to achieve this target using the Council's proposed policy requirement that new housing developments are to provide 35% affordable housing, 375 new dwellings would need to be developed each year. This calculation does not account for those developments with fewer than 15 dwellings which have no requirement to provide affordable housing or developments which cannot viably afford to provide non-market housing.

27. An annual requirement of 250 dwellings is identified at Paragraph 4.2 of the Core Strategy which would leave a significant short fall of affordable housing and act to compound the current situation. The approach taken by the Council ultimately accepts there will always be a shortfall in affordable housing provision and does not seek to redress this. We do not, therefore, consider this to be a robust or justified approach to achieving affordable housing in the District.

28. It is, therefore, considered in order to meet the District's affordable housing requirement additional housing land should be identified in order to ensure a wholesale increase in housing provision to address the Council's shortfall in affordable housing and meet the targets set for the plan period. The most appropriate and effective method by which to secure affordable housing provision is through developing large sites that are viably able to offer affordable housing units.

29. During the consultation of the submission Core Strategy the Council's Housing Strategy (2009) was not available and we reserve the right to make further comment on this document following the publication of this evidence.

The Green Belt

30. It is fully accepted by the Council that the Green Belt boundary is currently too tightly drawn and the release of some Green Belt land is necessary to meet the District's development requirements. However, it needs to be demonstrated that the areas of Green Belt land to be lost are justified and located in the most appropriate area and that areas of release land do not undermine the principle of the Green Belt.

31. It is understood from Paragraph 6.7 of the Submission Core Strategy the Council will seek to examine the degree to which current Green Belt land is helping to achieve the purposes of the Green Belt when considering reallocating land. However, areas of Green Belt are proposed to be reallocated for urban extensions prior to this research being undertaken.

Core Strategy Submission Document

O - 16617 - 5219 - Policy ENV8 - On-Site Renewable and Low Carbon Energy Generation - i, ii

16617 Object

CHAPTER 8 Policy ENV8 - On-Site Renewable and Low Carbon Energy Generation

32. Fairview New Homes fully support the justified retention of the areas of Green Belt where appropriate and the release of Green Belt land where needed. However, at present the proposed Housing policies and Green Belt policies are not coherent and the reallocation of certain areas of Green Belt is not based on a credible evidence base.

Environmental Issues

Policy ENV4 - Sustainable Drainage Systems (SUDS)

33. Fairview New Homes would like to support the flexibility contained within Policy ENV4 which recognises it is not always viably possible to incorporate SUDS in all developments.
Policy ENV8 - On Site Renewable and Low Carbon Energy Generation

34. We would also like to support Policy ENV8 on the same basis as Policy ENV4 in that it is important that the production of energy from renewable or low carbon sources is only required where it is viably possible so as not to resulting in developments not coming forward.

Transport

Policy T8 - Parking Standards

35. Fairview New Homes object to Policy T8 as it is currently contrary to National Policy requirements as set out in PPG13 which contains maximum parking standards. Indeed, this is recognised at Paragraph 10.27 of the Submission Core Strategy document. Enforcing minimum parking standards is not consistent with local or national sustainability aims and should not be an approach pursued by the Council.

Summary: Policy ENV8 - On Site Renewable and Low Carbon Energy Generation

34. We would also like to support Policy ENV8 on the same basis as Policy ENV4 in that it is important that the production of energy from renewable or low carbon sources is only required where it is viably possible so as not to resulting in developments not coming forward.

1.0 Instruction and Introduction

1.1 Charles Planning Associates Limited (Chartered Town Planners) is Instructed by Swan Hill Homes Limited (Swan Hill) to prepare and submit representations on their behalf in respect of the Rochford District Local Development Framework: Core Strategy Submission (September 2009) Development Plan Document.

1.2 The comments refer to the relevant sections and policy designations in the Submission document, as appropriate.

1.3 The comments set out in this submission are intended to assist the District Council in taking forward its Local Development Framework. It is our intention to continue to be involved in the LDF preparation process and we look forward to the opportunity to comment further at the Examination to the Core Strategy.

1.4 If you have any queries regarding the content of this submission then please do not hesitate to contact:

Peter Kneen BSc (Hons) MSc MRTPI
Planner

2.0 Housing:
Policy H1 - The Efficient Use of Land for Housing

2.1 Swan Hill recognises the importance of seeking to concentrate new developments mainly in the existing urban areas, on previously developed land where possible, particularly in view of the Government seeking to ensure 60% of all such new developments are on previously development land (PDL).

2.2 However, given the character of the District, and the strategic housing requirement of the East of England Plan, Swan Hill supports the approach that the Council must also make provision for additional development on the edge of existing settlements on greenfield sites, particularly in the most sustainable locations. As such, Swan Hill supports that where feasible, the redevelopment of existing employment sites for residential/employment purposes can make a contribution towards the strategic housing requirement, provided that sufficient additional employment land is brought forward to ensure the stability of employment levels in the District, and to ensure employment growth meets the East of England Plan requirements.

2.3 Swan Hill considers that Policy H1 should include consideration that new extensions to existing settlements have regard to their potential impact on the wider characteristics and openness objectives of the Green Belt.

Policy H2 - Extensions to Residential Envelopes and Phasing

2.4 Swan Hill generally supports the approach taken by the Council in this policy. As set out above, Swan Hill consider the Council's acknowledgment that housing requirements should be met through the allocation of land on the edge of the existing settlements is the most suitable way forward to meeting the Council's strategic housing requirement and complies with the advice in PPS3.

2.5 The need for suitable greenfield urban extensions represents the best way forward for the Council to meet its strategic housing requirement, as set out in the East of England Plan. Swan Hill supports the recognition that the potential supply of alternative previously developed sites is limited, without detrimentally affecting the character of the District, and therefore the best way forward is the use of sustainable greenfield urban extensions to the existing settlements of the District.

2.6 However, Swan Hill consider that a fundamental consideration that the District Council should consider relates to the potential impact of the urban extensions on the Green Belt policy has been somewhat overlooked. The wider sustainability credentials of the settlements of the District should only be one of many key considerations for determining the level of expansion. In view of the proximity of Southend-on-Sea to all the main settlements of the District, and the influence this has on the likely location many people would travel for employment and leisure, sustainability of many of the settlements is not a key overarching factor, and greater weight should be placed on the potential impact on the openness of the Green Belt, as this cannot be remedied if development occurs in the wrong location.

2.7 As such, Swan Hill considers that determining the location of growth for the main settlements should be to identify

Core Strategy Submission Document

S - 16883 - 8329 - Policy ENV8 - On-Site Renewable and Low Carbon Energy Generation - None

16883 Support

CHAPTER 8 Policy ENV8 - On-Site Renewable and Low Carbon Energy Generation

those locations where the impact on the wider setting of the Green Belt can be minimised. Further justification for those general locations chosen should be identified in Policy H2. In this regard, Swan Hill has serious concerns regarding the removal of Land South West of Great Wakering as a viable option for the growth of the settlement. The development of this area of Great Wakering, in addition to the potential redevelopment of the Star Lane Industrial Estate could provide a more comprehensive development, whilst ensuring that the wider openness of the Green Belt is maintained. Land South West of Great Wakering is significantly better placed to limit the impact on the wider Green Belt than Land West of Great Wakering, and could contribute to the provision of an important amenity and wildlife site for the local community.

2.8 In addition, Swan Hill consider that the Council now has no reserve provision in the event that any of the existing employment sites set out in Policy H1 fail to come forward for development within the envisaged timescale. Further, Land West of Great Wakering has not been identified in the SHLAA as a deliverable site to help meet the strategic housing requirement, contrary to the requirement set out in PPS3.

2.9 As such, Swan Hill would support the provision of suitable sites which could be safeguarded for future development in the likelihood of a shortfall in supply.

Policy H3 - Extensions to Residential Envelopes Post 2021

2.10 As set out above, Swan Hill supports the overall approach the Council has taken towards the provision of sustainable urban extensions as a suitable means of meeting their strategic housing requirement. However, as set out for Policy H2 above, Swan Hill has serious concerns regarding the removal of several proposed sites set out in the October 2008 Preferred Options Core Strategy, without any guarantee of the ability to deliver those sites set out in Policy H1.

2.11 As also considered above, the inclusion of West of Great Wakering for 250 dwellings should not be included ahead of South West of Great Wakering, in view of the fact that the site is not identified in the SHLAA as available, suitable and achievable as required by PPS3, and thus is not supported by a robust and creditable evidence base for its inclusion as a strategic site for development.

2.12 Whilst Swan Hill acknowledge that alterations to Policy H1 has resulted in the removal of some locations for growth in Policy H3 (as set out in the Sustainability Appraisal), Swan Hill does not consider that the most appropriate locations have been chosen.

2.13 In addition to the matters raised above, the use of West of Great Wakering would also result in the loss of valuable agricultural land, which clearly in a Green Belt location, should be less suitable for development than other sites, such as South West of Great Wakering, which would have limited impact on the wider Green Belt policy, and not result in the loss of valuable agricultural land.

2.14 Finally, in respect of Policies H1, H2 and H3, all of the above comments are based on our interpretation of the Submission Version Core Strategy when compared to the October 2008 Version of the Core Strategy. Without the ability to undertake a detailed assessment of the Council's SHLAA, it is not possible to clarify the proposed Core Strategy position regarding the proposed direction of growth proposed for the settlements in the District. As such, Swan Hill reserves the right to make additional representations regarding the proposed Policies H1, H2 and H3 following the publication of the SHLAA in due course.

Policy H4 - Affordable Housing

2.15 In general terms, Swan Hill supports the approach taken by the Council towards the provision of affordable housing for new residential developments. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H5 - Dwelling Types

2.16 Swan Hill supports the policy provision of H5, and considers that the approach taken by the Council for this policy represents a suitably flexible alternative to stipulating percentages of dwelling mix, sought by some local authorities. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy H6 - Lifetime Homes

2.17 In regard to this policy, Swan Hill objects to the Council's policy where all new dwellings should be provided to the Lifetime Homes Standard. Whilst it is acknowledged that the UK has an aging population, Swan Hill considers that seeking to provide Lifetime Homes on all sites is considered to be overly onerous for proposed developers, particularly when considering the requirement for all car parking spaces to be suitable for disabled users, which could result in more schemes becoming unviable. Therefore, the provision of a percentage of Lifetime Homes should be considered through negotiations with the Council at the planning application stage, and should be determined on a case-by-case basis.

3.0 Character of Place: Policy CP1 - Design

Core Strategy Submission Document

S - 16883 - 8329 - Policy ENV8 - On-Site Renewable and Low Carbon Energy Generation - None

16883 Support

CHAPTER 8 Policy ENV8 - On-Site Renewable and Low Carbon Energy Generation

3.1 The Town and Country Planning (General Development Procedure) Order 1995 (As Amended) makes the submission of a Design and Access Statement for most types of planning applications a Statutory requirement, and as such, the provision of a Design Brief represents a pre-requisite of all major planning applications.

3.2 Policy CP1 seeks to ensure the provision of good, high quality developments that reflect local characteristics and distinctiveness, this ideology is supported by Swan Hill.

4.0 The Green Belt:
Policy GB1 - Green Belt Protection

4.1 Following the amendments to the wording of the Policy since the October 2008 Preferred Options Core Strategy, Swan Hill is now generally supportive of Policy GB1 and its supporting text. However, as expressed above, it is important that where alterations to the Green Belt boundary occur as a result of the extension of the settlements to meet the strategic housing requirement, both the minimal amount of land is taken and where that land is taken for development, it represents the best available land which has a minimal impact of the wider openness characteristic of the Green Belt.

5.0 Environmental Issues:
Policy ENV3 - Flood Risk

5.1 Swan Hill generally supports the approach set out in Policy ENV3 regarding ensuring development accords with the sequential test of PPS25. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV4 - Sustainable Drainage Systems (SUDS)

5.2 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV4. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy ENV8 - On-site Renewable and Low Carbon Energy Generation

5.3 Whilst Swan Hill recognises the importance of reducing carbon emissions, particularly in new housing developments, and the role this can play in reducing the nations overall Greenhouse emissions. As such Swan Hill is generally supportive of Policy ENV8. It is noted that Policy ENG1 of the East of England Plan sets out a threshold of developments comprising 10 or more dwellings. Swan Hill consider it important for the District Council to justify the reduction in the threshold level.

5.4 Further, no assessment of Policy ENV8 has been set out in the Sustainability Appraisal which justifies the change in threshold from that of Policy ENG1 of the RSS.

Policy ENV9 - Code for Sustainable Homes

5.5 Following the revisions from the October 2008 Preferred Options Core Strategy, Swan Hill now generally supports the approach set out in Policy ENV9. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

6.0 Community Infrastructure, Leisure and Tourism:
Policy CLT1 - Planning Obligations and Standard Charges

6.1 Swan Hill generally supports the overall approach the Council has taken in Policy CLT1. It is considered Policy CLT1 sets out a degree of flexibility to ensure that all sites are considered on a site-by-site basis, assessing the individual merits of each planning application, in order to ensure the levels of contributions applicable meet the five tests of Circular 05/05. The Policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policies CLT5 - Open Space;
CLT7 - Play Space;
CLT8 - Youth Facilities; and,
CLT10 - Playing Pitches

6.2 Swan Hill supports the need for new residential developments to incorporate a degree of new publicly accessible open space, children's play space, youth facilities and playing pitches, and as such, generally supports the policy approaches taken by the Council.

6.3 However, it is important that whilst the Council may seek to undertake an assessment of providing standard charges for new development, which, as set out in Policy CLT1, this should be based on thorough public consultation and consideration and sound justification. Swan Hill consider that within the provision of a standard charge, it is important that such provision allows for a degree of flexibility to ensure that each site is assessed individually and on its own merits. This is particularly important for those sites close to existing open spaces and facilities. As such, the levels of

Core Strategy Submission Document

S - 16883 - 8329 - Policy ENV8 - On-Site Renewable and Low Carbon Energy Generation - None

16883 Support

CHAPTER 8 Policy ENV8 - On-Site Renewable and Low Carbon Energy Generation

open space and recreation facilities required in the 'standard charge' should be based on an up-to-date PPG17 Open Space assessment, which should be used to form a key consideration in the levels of provision likely to be required in the standard charge system proposed.

7.0 Transport: Policy T1 - Highways

7.1 Swan Hill supports the overall objectives set out in Policy T1 requiring developments to be located and designed to reduce the reliance on the private car and to meet the infrastructure needs generated by development or seek to help achieve these needs is acceptable in principle.

7.2 Swan Hill recognises the importance of providing sufficient infrastructure provision to meet the requirements of development, and that where developments have insufficient consideration of impact on existing infrastructure, they should be considered unacceptable and contrary to National policy guidance. However, Swan Hill considers it important to emphasise that the developer's role should not be seen as a means to meet existing shortfalls in provision.

Policy T3 - Public Transport

7.3 Swan Hill is generally supportive of the policy approach set out in T3, however, as set out in paragraph 7.2 above, it is important that the District Council do not consider that it is the developer's responsibility to resolve existing shortfalls in provision of public transport, and any contribution towards additional public transportation provision should only be to mitigate against the additional level of demand likely from the development proposed.

Policy T5 - Cycling and Walking

7.4 Swan Hill supports the general approach to this policy, as Swan Hill recognises the importance of promoting the use of alternatives to the private car. The policy provision acknowledges the need to ensure relevant contributions in the event of additional travel demands generated by individual developments, whilst also setting out additional aspirations for the cycle network in the District.

7.5 As such, Swan Hill considers this policy accords with the advice of National Policy and is therefore considered sound by Swan Hill.

Policy T8 - Parking Standards

7.6 The Council has recently (January 2007) adopted SPD on the requirements for parking standards, and as such, Swan Hill generally supports the policy approach chosen by the Council. As set out in the SPD, whilst Swan Hill generally supports the approach taken by the District Council towards setting residential parking standards, in that the Council has recognised that in the suburban areas, even with some access to public transport, the majority of residents will rely on the use of private cars. However, Swan Hill has concerns over the failure of the District Council to comply with the provisions of PPG13: Transport (2001) which sets out that Local Planning Authorities should not set minimum standards for car parking. Whilst it is acknowledged that PPS3 sets out provision for the consideration of local circumstances, it is considered that the Council has not justified this deviation from PPG13's maximum standard.

7.7 Whilst it is acknowledged that such justification may become apparent through the work currently being undertaken by Essex County Council, until such time, the District Council should only seek to apply the maximum standards indicated in PPG13. However, Swan Hill recommends that the District Council make provisions in the wording of the Policy to allow for changes in the event that future policy on car parking standards need to reflect the County standard, following the completion of the County Council review.

8.0 Economic Development: Policies ED3 - Existing Employment Land ED4 - Future Employment Allocations

8.1 In respect of Policies ED3 and ED4, Swan Hill notes that they have changed considerably since the October 2008 Preferred Options document, in that they are site specific regarding the location of the proposed redevelopment of existing employment sites. These four sites are also identified in Policy H1 - Efficient Use of Land, and in general, Swan Hill supports the approach to the redevelopment of these sites (where feasible) based on the assessments of the sites set out in this version of the Core Strategy.

8.2 However, Swan Hill has concerns that these policies might not be considered suitably sound given that insufficient opportunity has been allocated for consultation on their redevelopment. Without the SHLAA being publically available prior to the consultation on this Core Strategy, an insufficient evidence base has been provided to corroborate that these sites are neither suitable or deliverable to meet the test of soundness requirements.

Summary: Policy ENV8 - On-site Renewable and Low Carbon Energy Generation

5.3 Whilst Swan Hill recognises the importance of reducing carbon emissions, particularly in new housing developments, and the role this can play in reducing the nations overall Greenhouse emissions. As such Swan Hill is

Core Strategy Submission Document

S - 16883 - 8329 - Policy ENV8 - On-Site Renewable and Low Carbon Energy Generation - None

16883 Support

CHAPTER 8 Policy ENV8 - On-Site Renewable and Low Carbon Energy Generation

generally supportive of Policy ENV8. It is noted that Policy ENG1 of the East of England Plan sets out sets out a threshold of developments comprising 10 or more dwellings. Swan Hill consider it important for the District Council to justify the reduction in the threshold level.

5.4 Further, no assessment of Policy ENV8 has been set out in the Sustainability Appraisal which justifies the change in threshold from that of Policy ENG1 of the RSS.

Careful consideration needs to be given to accelerating the Code for Sustainable Homes (CSH) and BREEAM standards in advance of adopted policy. CSH is not a mandatory requirement and only the energy criteria (i.e. 25%) will be become regulation through Building Regulations Part L from 2010 and further improvements at specified milestones thereafter.

In 'Building a Greener Future Policy' reference is made to building performance and local authorities would need to have regard to a number of considerations, including whether the proposed approach is consistent with securing the expected supply and pace of housing development shown in the housing trajectory required by Planning Policy Statement 3. Indeed, further consistent references are also referenced in PPS 1.

It goes on to state that national standards for reducing carbon emissions from homes should be set through building regulations, supported through the planning system. Indeed, given the level of ambition built into the national framework, CLG believe it would make it harder for industry to invest in supply chains with confidence or get the economies of scale to make new technologies cost effective. "It would also jeopardise our parallel commitment to increase the level of house building and deliver the affordable homes the country needs".

Given, these drivers it is considered that if levels for CSH and BREEAM are stipulated they are subject to review against national policy and importantly viability tests. Furthermore, the 'Core Strategy' would benefit from reflecting on the publication of the 'Definition of Zero Carbon Homes and Non-domestic Buildings' policy, and the soon to be published 2010 Code for Sustainable Homes consultation paper, and in addition the UK-GBC Consultation on a Code for Sustainable Buildings.

With regard to water conservation aspects, the setting of water standards through CSH is fraught with risks, for example the Approved Document G of the building regulations, 'Sanitation, Hot Water Safety and Water Efficiency' was published in May and was to take effect from October 2009; however this has now been put back to April 2010. The reason behind this is because under the Technical Standards Directive (98/34/EC), notification to the European Commission of the guidance contained in the draft Approved Document G was required.

Consequently on the 3rd September a "detailed opinion" was received from the Commission with a number of comments on the draft Approved Document. This resulted in a '3 month standstill' which prohibits introduction of the Approved Document before 2 December 2009. Accordingly, CLG have decided to delay its issue until 6 April 2010.

With regard to surface water run-off, category SUR1 of CSH is now subject to similar review by CLG Technical Advisory Group, because it has been found to be unreasonable in its intent and will result in significant technical problems and additional costs compared with current regulations.

Moreover, PPS 25 must be treated with caution as its interpretation is subject to variable outcomes at the sub-regionally level. For example, we support the principles of SuDs; however Highways Departments very often will not accept or adopt such measures

Summary: If levels for CSH and BREEAM are to be stipulated within the Core Strategy, wording must be inserted which states that levels/requirements are subject to review against national policy and, importantly, viability tests at the appropriate time.

Alternatively, no minimum target should be set within the Core strategy, but words be inserted which state that the minimum levels/requirements will be set for an individual developments when the detailed scale and nature of a development scheme is known or defined (e.g. within a Design Brief or Master Plan, Concept Statement or Planning Application for a site).

Change to Plan If levels for CSH and BREEAM are to be stipulated within the Core Strategy, wording must be inserted which states that levels/requirements are subject to review against national policy and, importantly, viability tests at the appropriate time.

Alternatively, no minimum target should be set, but words be inserted which state that the minimum levels/requirements will be set for an individual developments when the detailed scale and nature of a development scheme is known or defined (e.g. within a Design Brief or Master Plan, Concept Statement or Planning Application for a site) and will be set in accordance with national building regulations or other national policy at the time unless viability tests indicate that such levels/requirements would not be appropriate/would make a scheme unviable.

Full Text: ROCHFORD DISTRICT COUNCIL - LOCAL DEVELOPMENT FRAMEWORK CORE STRATEGY SUBMISSION
SEPTEMBER 2009

Icen Projects Ltd (Icen) has been instructed by Colonnade Land LLP (Colonnade) to submit representations to the Rochford Local Development Framework Core Strategy Submission (CSS).

a) Overview

It is our conclusion that the CSS is not justified, effective or consistent with national policy, as required by Planning Policy Statement 12: Creating Strong Safe and Prosperous Communities through Local Spatial Planning (PPS12) and is therefore vulnerable to being found unsound by an Inspector through the Examination in Public.

b) Background and Summary

These representations follow those made by Icen on behalf of Colonnade to the Preferred Options Core Strategy, submitted via letter dated 17 December 2008. In this regard, we would request that the Council confirms that the representations made to the Preferred Options Core Strategy will be taken into account alongside the current representations, particularly as there are a number of cross references between the two sets of representations.

It is not considered necessary to reiterate the content of the previous representations, as they were made at the appropriate stage and will be considered by the Planning Inspectorate in due course, but it is inevitable that certain elements will require restating where it is not clear that they have been taken into account in the production of the CSS. For clarity, therefore, Colonnade feel that it is appropriate to clarify the 'in-principle' issues that were raised in the representations to the Preferred Options Core Strategy, recognising that these issues were raised in the context of a wider and more coherent justification made within the representations:

- â€¢ Further cross-referencing of the recommendations made within the evidence base is required;
- â€¢ Greater focus should be placed on promoting Rochford as the principal settlement within the District;
- â€¢ Coombes Farm is the most logical location for residential development abutting the urban area of Rochford and as such warrants recognition as a general location for residential development;
- â€¢ The allocation of Three Ashes Farm for employment generating uses will be pursued;
- â€¢ Recognition that it is not realistic to expect residential allocations to be met mainly on Brownfield sites, nor should the intensification of smaller sites in residential areas be pursued;
- â€¢ Many of the sites identified as suitable for residential development will not be viable and will not come forward for development within the timescales anticipated;
- â€¢ The failure to provide the necessary justification for the proposed infrastructure improvements sought in Appendix H1;
- â€¢ The inclusion of an affordable housing exception policy was sought; and
- â€¢ The need to identify sites capable of delivering employment growth in the short term.

Following assessment of the CSS presented by the Council for consultation prior to submission to the Secretary of State, Colonnade considers the Plan to be 'unsound' as the document consistently fails to meet the tests of soundness set out in the table following Paragraph 4.52 of PPS12. For clarity, PPS12 confirms that to be 'sound' a Core Strategy should be JUSTIFIED, EFFECTIVE and consistent with NATIONAL POLICY and defines 'justified' as "founded on a robust and credible evidence base" and "the most appropriate strategy when considered against the reasonable alternatives" and 'effective' as "deliverable", "flexible" and "able to be monitored".

The rationale for the above is identified in the remainder of these representations, which are provided in the interests of ensuring the Council delivers a strong, robust and logical Core Strategy that guides the future development of the District in a justified and effective manner.

b) Colonnade

As the Council is aware from previous submissions to the Local Development Framework, Colonnade is a strategic land company with a particular interest in the future development of the District as a consequence of a number of sites that it controls, particularly around Rochford.

The Council will also be aware that Colonnade has recently submitted an outline planning application for the residential development of the land at Coombes Farm, Rochford to provide a sustainable urban extension comprising up to 326

16256 Object

CHAPTER 8 Policy ENV9 - Code for Sustainable Homes

residential dwellings, with associated accesses and community uses. Whilst the planning application process is clearly separate from the Local Development Framework production process, Colonnade wishes to continue the promotion of the site as a suitable location for residential development.

Accordingly, these representations focus on the legal requirements and tests of soundness associated principally with the Housing and Employment chapters of the CSS, with reference where appropriate to the sites that are controlled by Colonnade, the outline planning application at Coombes Farm and other issues where relevant.

c) Housing

i. Date of Adoption

The CSS assumes an adoption date of 2010 and plans for the provision of housing to 2025.

Taking account of the potential delays to the adoption of the Plan, including the Examination process, it would be more appropriate for the CSS to provide sufficient flexibility to allow for delays in its adoption. Colonnade considers an adoption date of 2011 for the CSS is a more realistic target.

Taking account of the advice in Paragraph 4.13 of PPS12, which states that the time horizon for the Core Strategy should be "at least 15 years from the date of adoption" it would be appropriate for the CSS to plan for the provision of housing to 2026 at the earliest. As such, Colonnade does not consider the CSS to be 'flexible' in the context of the tests of soundness in the table following Paragraph 4.52 of PPS12.

ii. Housing Delivery

However, setting the above aside, the Housing Chapter identifies the minimum housing delivery target for the period 2001 to 2021 of 4,600 dwellings as set out in the East of England Plan, with the annual average requirement of 250 dwellings per annum to extend provision from 2021 to 2025. It also confirms that the residual target for the period 2006 to 2021 is 3,790 dwellings, taking account of the delivery of 810 dwellings in the period 2001 to 2006, and a further 618 dwellings have been completed between 2006 and 2008.

This leaves a residual housing provision target of a minimum of 3,172 dwellings in the period 2008 to 2021. Taking into account the required provision beyond 2021, the residual housing provision target in the period 2008 to 2025 is a minimum of 4,172 dwellings. The disparity between these figures and those provided within the CSS are explained by the rounding down of the annual average delivery requirement in the period 2006 to 2021 to 250 dwellings per annum, compared with the actual figure of 252.67.

The table at Paragraph 4.6 of the CSS identifies the source of housing provision that will meet the identified minimum requirements and includes figures for 'Extant Planning Permissions' and 'Existing allocations/other appropriate sites identified in Strategic Housing Land Availability Assessment'. These figures, along with the actual completions within the period are combined to produce the figure for the 'Total without Green Belt release' figure.

Setting aside the concern regarding under-provision associated with the rounding down of the annual average delivery requirement in the period 2006 to 2021, the CSS fails to identify the sites that will contribute to the 'Extant Planning Permissions' provision. The identification of the sites that will contribute to the 'Extant Planning Permissions' should be provided in the context of the findings of the Inspector in the appeal by Asprey Homes [APP/G5180/A/07/2043219/NWF] who determined that the reliance on a delivery rate of 100% is unsafe [IR287].

Furthermore, at the time of writing these representations, the Strategic Housing Land Availability Assessment 2009 has not been published. It is impossible therefore for a full assessment of the proposed housing provision to be undertaken to confirm whether the CSS is 'founded on a robust and credible evidence base' [test of soundness in the table following Paragraph 4.52 of PPS12].

iii. Redevelopment of Employment Sites

Paragraph 4.14 of the CSS refers to the identification of the four employment sites that are considered by the Council to be suitable for redevelopment to residential use. However, the failure to publish the Strategic Housing Land Availability Assessment 2009 either before or alongside the publication of the CSS means that the assumptions made by the Council as to the suitability, availability, viability and deliverability of the sites cannot be assessed.

It has been necessary, therefore, to review the assumptions made in the Rochford Urban Capacity Study 2007 (UCS) regarding the sites. Within the section of the UCS entitled 'Redevelopment of Established Employment Land' [pages 22 & 23] includes a list of those sites assessed, their indicative capacities and the probability of residential development coming forward at the sites within the plan period (identified elsewhere as 2001 - 2021). The list includes the four sites identified in the CSS of Eldon Way/Foundry Estate, Hockley; Rawreth Lane Industrial Estate, Rayleigh; Stambridge Mills; and Star Lane Industrial Estate, Great Wakering.

In total, the UCS identifies an indicative residential redevelopment capacity of 486 units on the four sites (118, 220, 60 and 88 respectively). Of these, it identifies the Rawreth Lane Industrial Estate and Stambridge Mills as having a 'high'

16256 Object

CHAPTER 8 Policy ENV9 - Code for Sustainable Homes

probability of coming forward for development in the Plan period (2001 - 2021), which would deliver 280 residential dwellings using the Council's own figures. The Star Lane Industrial Estate (referred to in the UCS as the Star Lane Brickworks) is identified as having a 'medium' probability of coming forward for development in the Plan period, with capacity to deliver 88 residential dwellings. It is unclear, therefore, where the figure for 'Existing allocations/other appropriate sites identified in Strategic Housing Land Availability Assessment'.

Set against this is the identification of these four sites in the CSS as being capable of delivery for residential development within the Plan period, with 671 units delivered between 2006 and 2015 and a further 506 units between 2015 and 2021.

The UCS also states in the same section that:

"There are considerable areas of land in the district that are currently allocated for, and in use as, employment land. The redevelopment of such sites for residential use would reduce demand for residential development on greenfield sites, but would at the same time create a need for alternative sites to be found for employment. Such an approach, which would be likely to require the decontamination of existing employment land to make it fit for residential use, together with development of a greenfield site and implementation of additional infrastructure to serve the new employment area, may well be unsustainable." [our emphasis]

The UCS appears to confirm therefore, that not only would the redevelopment of the four sites listed in the CSS be unlikely within the Plan period, but also potentially unsustainable. In this regard, it is notable that the promoters of Stambridge Mills sought the Screening Opinion of the Council as to whether Environmental Impact Assessment of the planning application for the redevelopment of the site for residential use was required in 2007, but to date are yet to submit a planning application for the redevelopment of the site.

In light of this, Colonnade does not consider the CSS is 'the most appropriate strategy when considered against the reasonable alternatives' [test of soundness in the table following Paragraph 4.52 of PPS12], which include the provision of residential development in East Rochford.

iv. Strategic Housing Growth to the East of Rochford

Furthermore, whilst paragraph 2.62 of the CSS identifies concern relating to the identification of locations to the east of Rochford for development on the basis that 'vehicular movements would inevitably be directed through Rochford's historic core', the CSS later identifies Stambridge Mills as a suitable site for residential redevelopment.

In light of the evident conflicts between the evidence base provided in support of the CSS and the absence of other evidence, the CSS is not considered 'sound' in the context of the tests of soundness in the table following Paragraph 4.52 of PPS12.

v. Housing Trajectory

Paragraph 4.28 of the CSS confirms that policies H1, H2 and H3 of the CSS will deliver housing supply as illustrated in the Housing Trajectory at Appendix H2. This Housing Trajectory is transposed from the 2008 Annual Monitoring Report (AMR).

Whilst on the face of it, the Housing Trajectory appears to confirm that the Council can meet its requirement to identify a five year housing supply, many of the sites identified within the AMR do not conform to the guidance issued by CLG in August 2008, on the assessment of a five year land supply. The guidance identifies sites that can be included within the five year assessment of housing supply as:

"those that are allocated for housing in the Development Plan, sites that have planning permission (outline or full planning permission that has not been implemented) and specific, unallocated brownfield sites that have the potential to make a significant contribution to housing delivery during the 5 year period".

Table 4.10: Projected Net Completions of the AMR confirms that the five year housing land supply figure includes sites from 'other land allocated for residential purposes', which are based on land allocations outside existing settlements. However, it should be clarified that these land allocations are not currently allocated for housing development in an adopted Development Plan. As such, these unallocated greenfield sites that are yet to make significant progress through the planning system should be discounted and the five year housing land supply recalculated.

The table below has been prepared to confirm the extent of the shortfall should the sites from 'other land allocated for residential purposes' be removed from the calculation of the Rochford five year housing land supply, in accordance with the guidance issued by CLG:

Recalculated Five Year Housing Land Supply (2009 - 2014):

Year
1st April 2009 to 31st March 2010
Predicted Delivery (A)

Core Strategy Submission Document

16256 Object

CHAPTER 8 Policy ENV9 - Code for Sustainable Homes

106 dwellings
Allocations on 'other land allocated for residential purposes' (B)
0
Residual delivery (A-B)
106 dwellings
Delivery Shortfall
0

Year
1st April 2010 to 31st March 2011
Predicted Delivery (A)
217 dwellings
Allocations on 'other land allocated for residential purposes' (B)
150
Residual delivery (A-B)
67 dwellings
Delivery Shortfall
150

Year
1st April 2011 to 31st March 2012
Predicted Delivery (A)
544 dwellings
Allocations on 'other land allocated for residential purposes' (B)
300
Residual delivery (A-B)
244 dwellings
Delivery Shortfall
300

Year
1st April 2012 to 31st March 2013
Predicted Delivery (A)
395 dwellings
Allocations on 'other land allocated for residential purposes' (B)
375
Residual delivery (A-B)
20 dwellings
Delivery Shortfall
375

Year
1st April 2013 to 31st March 2014
Predicted Delivery (A)
300 dwellings
Allocations on 'other land allocated for residential purposes' (B)
300
Residual delivery (A-B)
0 dwellings
Delivery Shortfall
300

TOTAL

Predicted Delivery (A)
1,562 dwellings

Allocations on 'other land allocated for residential purposes' (B)
1,125 dwellings

Residual delivery (A-B)
437 dwellings

Delivery Shortfall
1,125 dwellings

The above table confirms that the removal of the 'other land allocated for residential purposes' from the calculation of the Rochford five year housing land supply leaves the Council with a minimum net additional housing delivery of 437 dwellings, which equates to a supply of 1.7 years based on the adjusted annual delivery target of a minimum of 255 net

Core Strategy Submission Document

16256 Object

CHAPTER 8 Policy ENV9 - Code for Sustainable Homes

additional dwellings per annum. As such, the Council is failing to meet its requirement to demonstrate a five year housing land supply in accordance with PPS3 and the supporting guidance provided by CLG. It is notable that the recent application by David Wilson Homes at Land between Main Road and Rectory Road and Clements Hall Way, Hawkwell identifies an even greater shortfall in the Council's five year housing land supply.

In addition to the above, the AMR does not include a commentary on how deliverability has been assessed against the requirements of paragraph 54 of PPS3.

Furthermore, the guidance from CLG confirms that the windfall sites cannot be relied upon in demonstrating a five year supply unless a Local Planning Authority can demonstrate genuine local circumstances exist to allow this exception. However, the second paragraph of the section entitled 'Housing Trajectory and Five Year Housing Supply' confirms that the estimated completions in the years 2008 to 2013 includes estimated yields through 'intensification' coming forward in future years. With reference to the definition of 'intensification' on page 13 of the AMR, it appears that the 'Housing Trajectory and Five Year Housing Supply' also includes provision for windfall sites. As such, the Council is required to demonstrate the 'genuine local circumstances exist to allow this exception'.

The pressures on delivery and need for additional sites are more acute when it is considered that an average delivery rate of 204 dwellings per annum was achieved during a strong period of housing market growth. In view of the current economic downturn, and significant problems faced within the housing market, the Council should seek to identify appropriate and deliverable sites to meet its regional housing target provision commitments. Suitable sites would include Coombes Farm, which has been positively promoted for development through the LDF process.

It may, therefore, be more appropriate for the Council not merely to allocate sufficient sites to meet the minimum targets set down by the East of England Plan, but to identify a reservoir of land capable of coming forward for development should the sites identified through the CSS and Allocations Development Plan Documents (DPD) fail to come forward for development within the anticipated timescales.

vi. Appendix H1

As set out in the representations to the Preferred Options Core Strategy, there is continuing concern that the list of improvements to infrastructure required in support of residential development as set out in Appendix H1 fails to provide the necessary justification for its inclusion. Whilst the preamble seeks to clarify why the infrastructure is sought, the inclusion of this list should be fully justified, otherwise it is of little value. Furthermore, it would be of benefit to provide further details of the existing community infrastructure provision and capacity within the evidence base.

The failure to provide the necessary justification for its inclusion means that the CSS will not be 'founded on a robust and credible evidence base' [test of soundness in the table following Paragraph 4.52 of PPS12].

d) Character of Place

As set out in the representations to the Preferred Options Core Strategy, Colonnade considers that, with respect to the requirement to produce and adhere to Development Briefs for large residential developments, as set out in Policy CP1, the Council should not seek to impose further demands on developers where existing regulations provide sufficient requirements regarding design. In this instance, Design and Access Statements provide sufficient design guidelines for developments and there is no additional information provided in the policy or supporting text that clearly sets out the justification for this requirement.

e) Green Belt

With reference to the comments regarding the redevelopment of employment sites under the 'Housing' section above and the requirement to allocate sufficient land to meet the minimum housing provision targets as required by the East of England Plan, Colonnade considers that the chapter on Green Belt, and policy GB1 in particular, fails to provide the necessary evidence base that will allow it to be monitored effectively.

It is inherent that the proposed redevelopment of previously developed employment sites for residential use in order to reduce the requirement to allocate previously undeveloped land for residential use will displace these employment uses. In turn, therefore, the separate allocation of previously undeveloped Green Belt to accommodate the compensatory employment provision is required. This is accepted in principle at paragraph 11.11 of the CSS.
